Extended styles

Kunena Support **PRO**

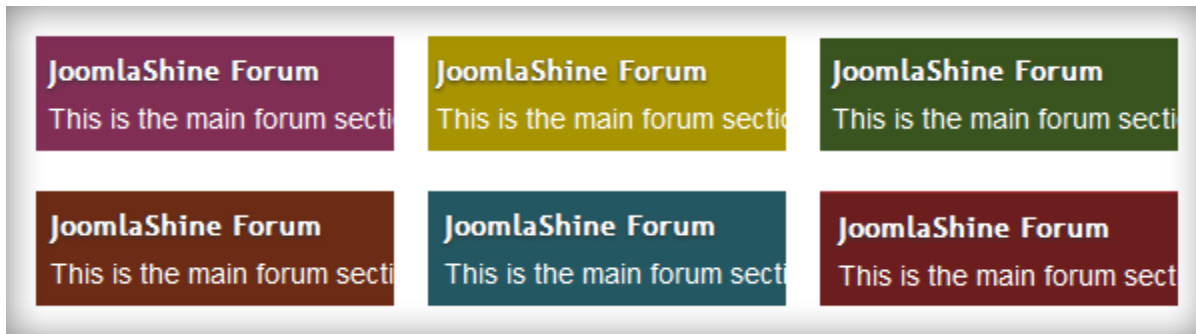

JSN Tendo theme for Kunena

After purchasing **JSN Tendo template**, you can download **JSN Tendo theme** at the Customer Area. This theme helps you build a nice forum easily.

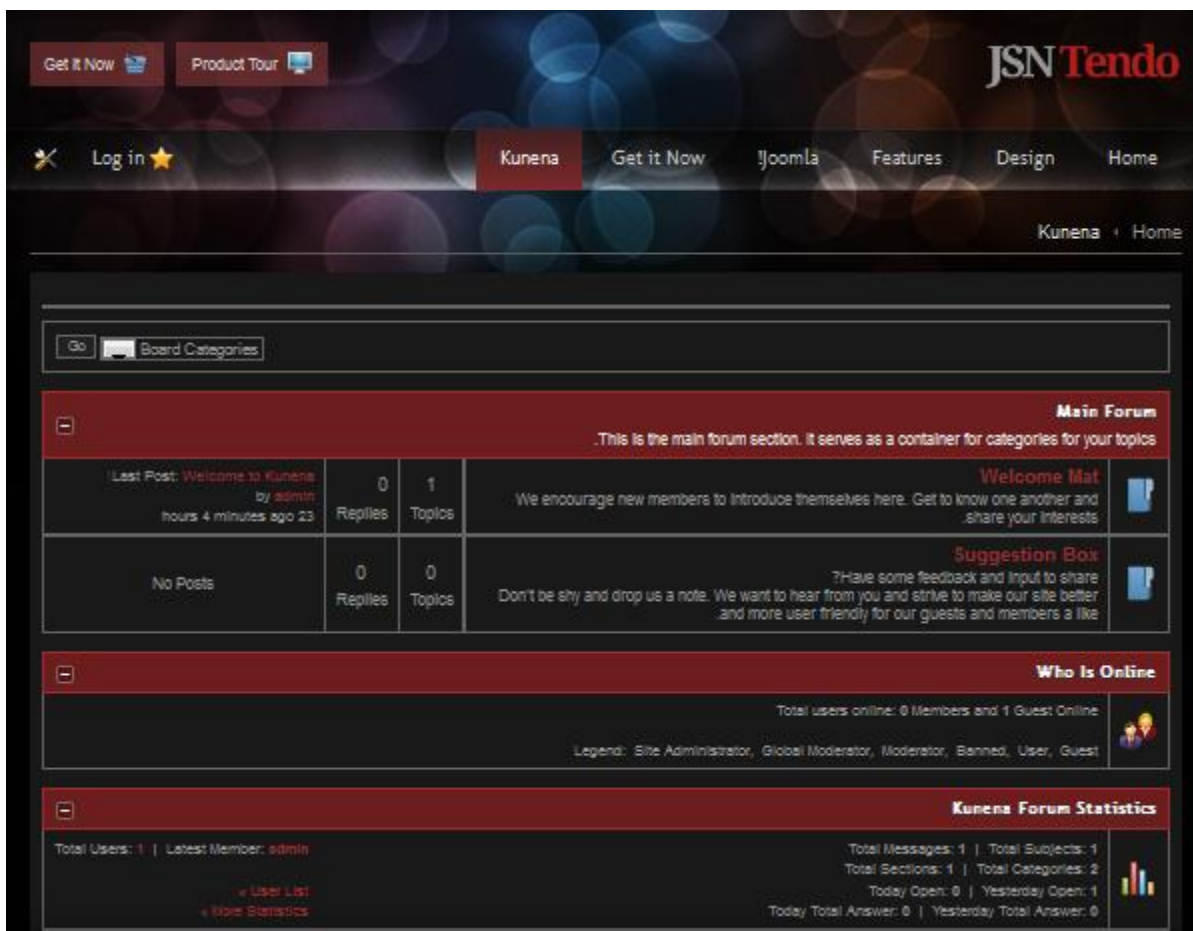

6 colors support

JSN Tendo theme comes with 6 colors which go with 6 defined colors of JSN Tendo template: Yellow, red, green, pink, orange and cyan.

RTL Support

To set RTL support to Kunena, you just need to add **&jsn_setdirection=rtl** to the end of the website address. Then, add **&jsn_setdirection=ltr** to switch it to normal layout.

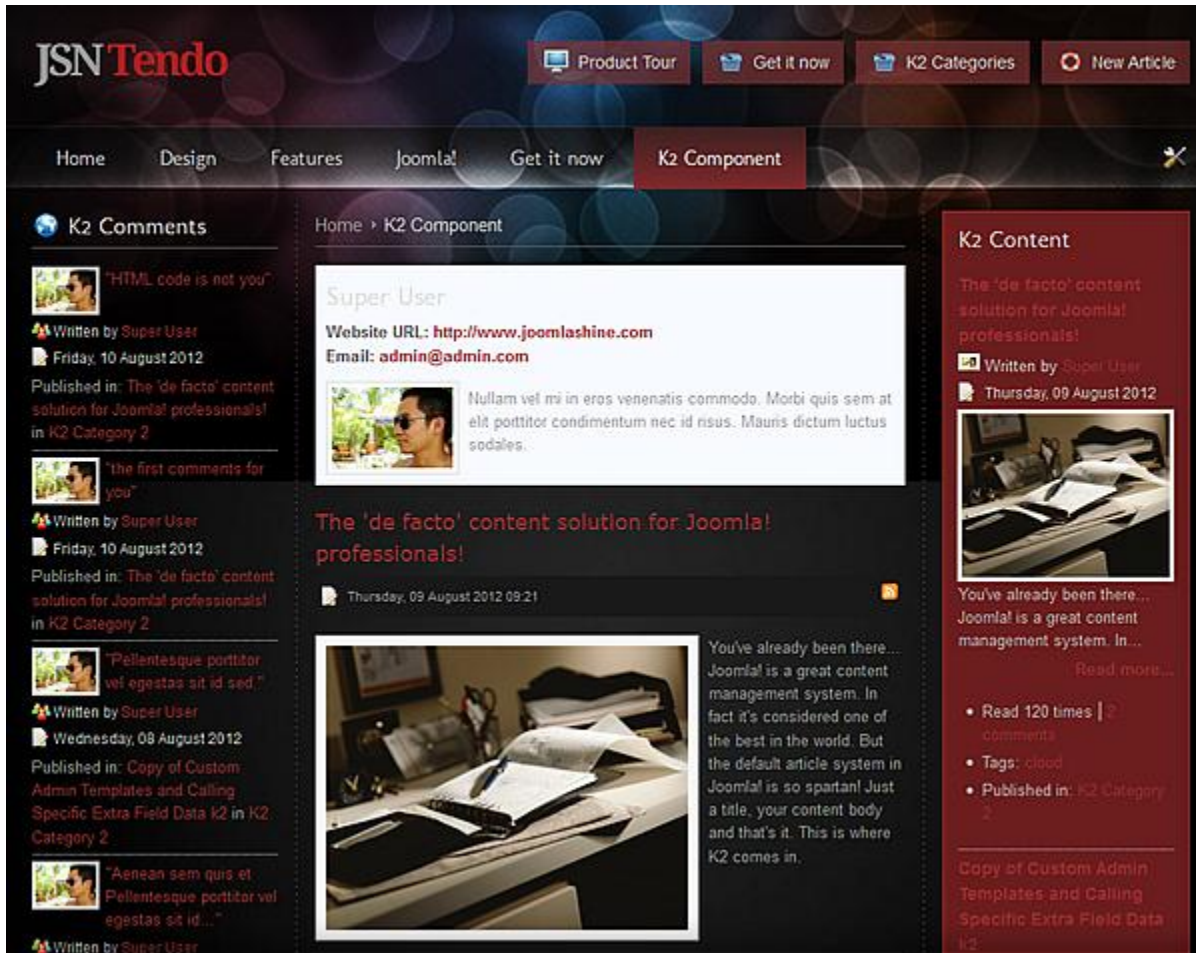

Attention!

Kunena is not included in the JSN Tendo template package. You can download Kunena freely at <http://www.kunena.org/>

Read more: Section [Kunena](#) **PRO**

K2 Support

Here is how K2 and JSN Tendo combination looks like. You can see all **K2 components** such as K2 Comment, K2 Content, K2 Users, TagCloud, Article, etc work well with JSN Tendo.

JSN Tendo is fully supported K2 style

Attention!

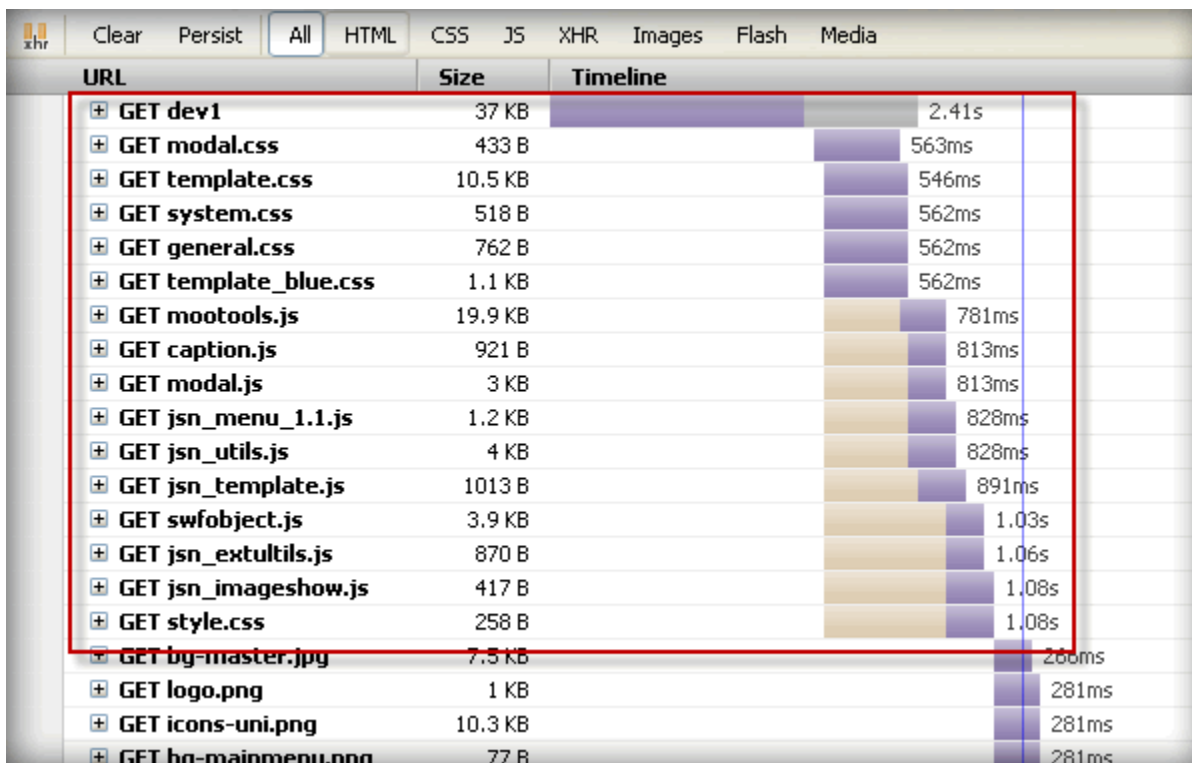

K2 is not included in the JSN Tendo template package. You can download K2 freely at <http://getk2.org/>

CSS/JS Compression **PRO**

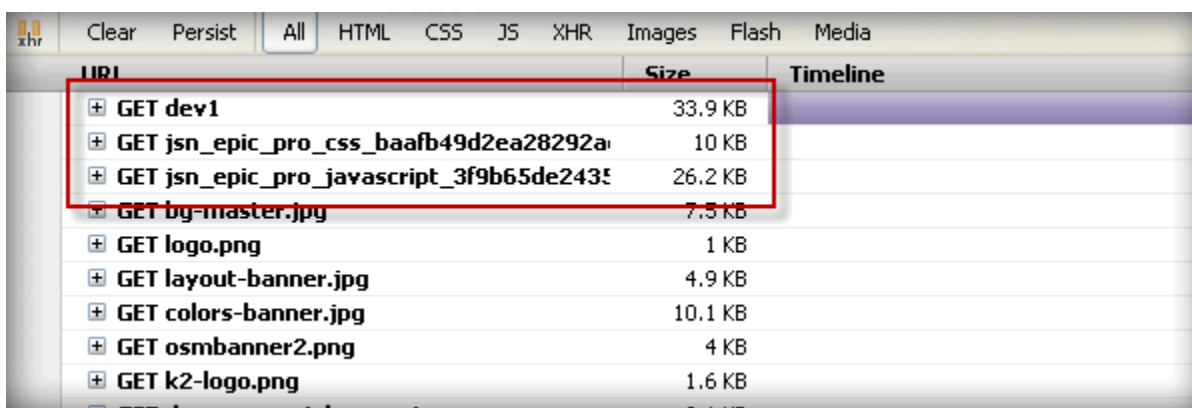

At JoomlaShine.com, we put great effort into optimizing our templates performance with multiple techniques like image sprites application, clean html code output and now one new step – **CSS/JS Compression**.

What it does is combine all CSS/JS files into a single file and deliver it in GZIP compressed state to browser.

After enabling CSS/JS compression

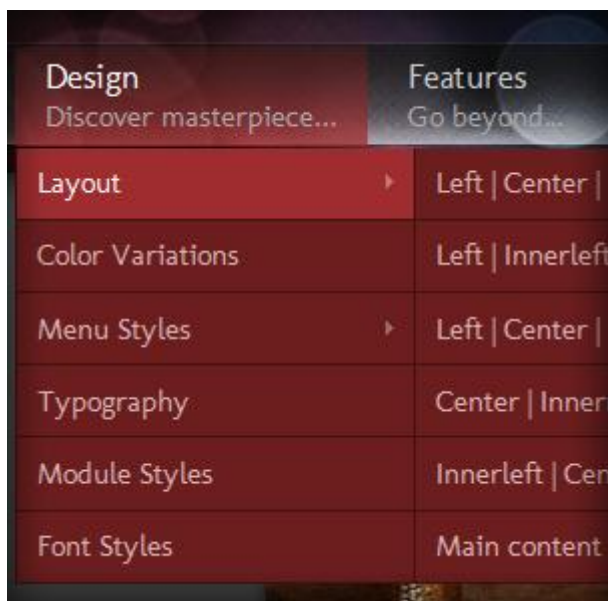

This feature significantly reduces http request number to server as well as overall loading size, which results in 35% performance boost. For more information, please read the section **Compress CSS/JS** in this document.

Read more: Section [CSS/JS Compression](#) **PRO**

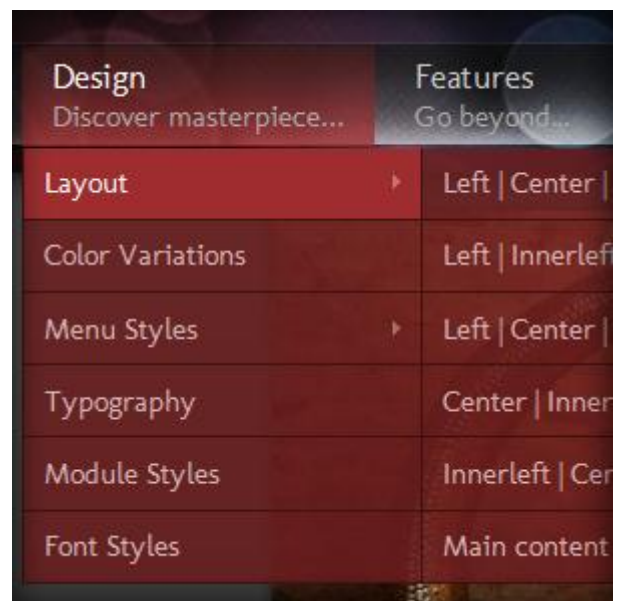

CSS3 Effects

CSS3 effects help your website run faster and look better. With CSS3 effect, modules have rounded, shadowed border; menu items display more smoothly; buttons and bullets use gradient colors instead of images, etc.

A module without CSS3 effects

A module with CSS3 effects

Unicons **PRO**

JSN Tendo is shipped with **20 carefully selected icons** which can be used for multiple purposes. We call this concept **Unicons**.

- “**article**”

- “**download**”

- “**info**”

- “**selection**”

- “**calendar**”

- “**folder**”

- “**mail**”

- “**settings**”

- “**cart**”

- “**help**”

- “**online**”

- “**star**”

- “**comment**”

- “**home**”

- “**rss**”

- “**statistics**”

- “display”

- “image”

- “search”

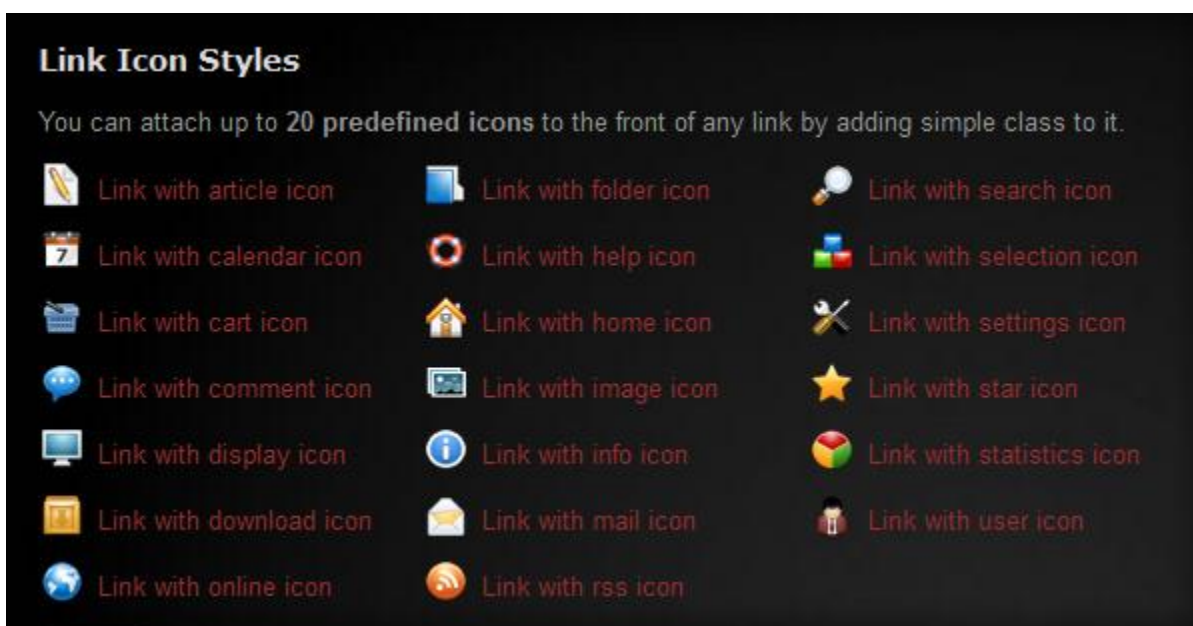

- “user”

Here you can see quick examples of how these beautiful icons can be utilized.

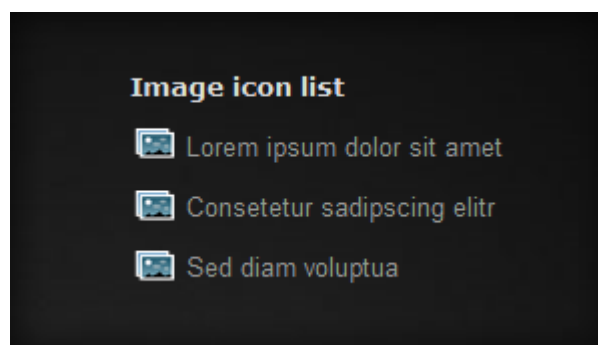

UniIcons attached to menu items

UniIcons attached to links

UniIcons attached to module header

UniIcons attached to list items

Multiple icons, single image

JSN Tendo utilizes the image sprite CSS technique to reduce the number of HTTP requests to the server.

Technically, all icons are merged in one single image file and visitors will need to make **just one single request/download** to the server to get all icons. If you have some extra time, please read [more about CSS sprites](#).

Native RTL support

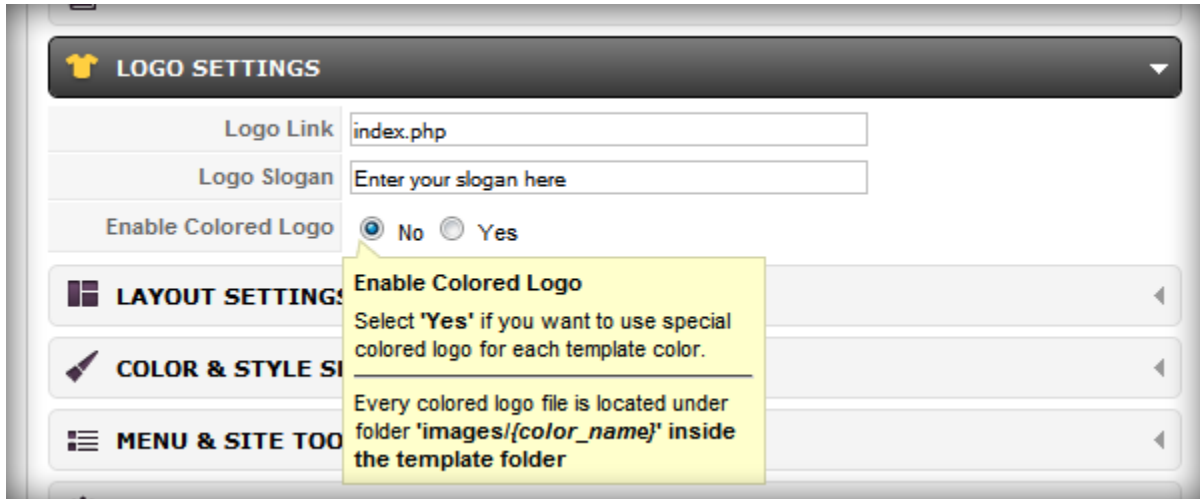

JSN Tendo Right To Left layout

All JoomlaShine templates are equipped with **native RTL support**. We spent a huge amount of time tweaking every tiny detail of the template to make it look absolutely awesome in the RTL mode. Everything is horizontally-flipped including the dropdown main menu and side menu.

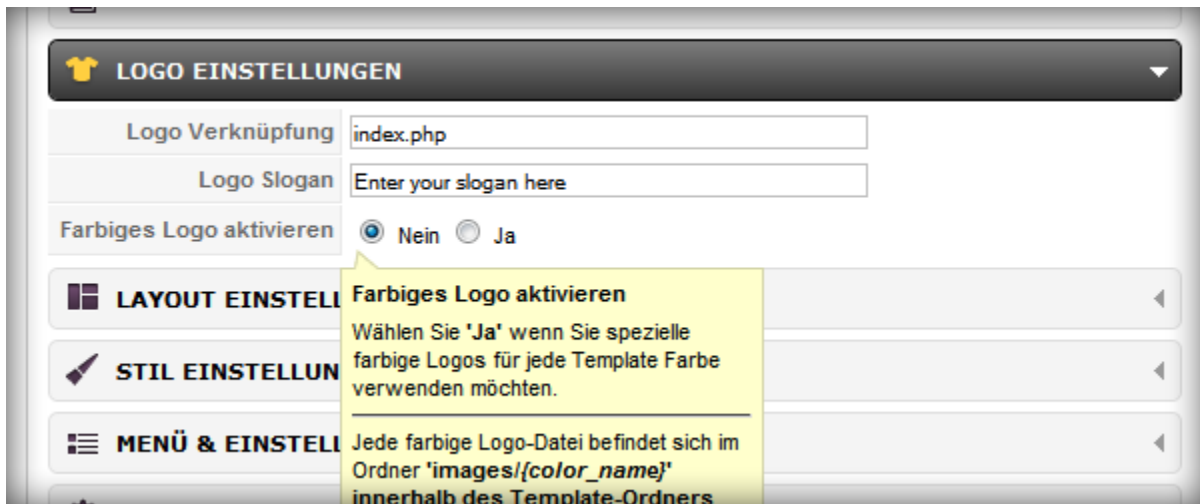

You don't have to do any additional template configuration to enable the RTL mode. Just set some RTL language in Joomla! administration and our template will automatically detect and enable the RTL mode.

Multilingual support

In JoomlaShine.com templates, all the wording of both back-end and front-end are moved to separate language files, so you can easily translate them into any language you want. Currently our templates support **14 primary languages** with more to come in the future.

English language

German language

For more information about supported languages, please read section **Multilingual support** in this document.

Read more: Section [Multilingual support](#).

Free Extensions

JSN PowerAdmin

JSN PowerAdmin makes your Joomla administration process easy and enjoyable. It allows you to have full control over your Joomla website in a single screen. You can manipulate elements by using an intuitive GUI with drag-n-drop operations.

JSN PowerAdmin main features:

- Search any items quickly in back-end with **Spotlight Search**
- Control the website content in one place with **Site Manager**

[JSN PowerAdmin](#) is totally FREE and you can download it without any registration.

[Learn more about JSN PowerAdmin](#)

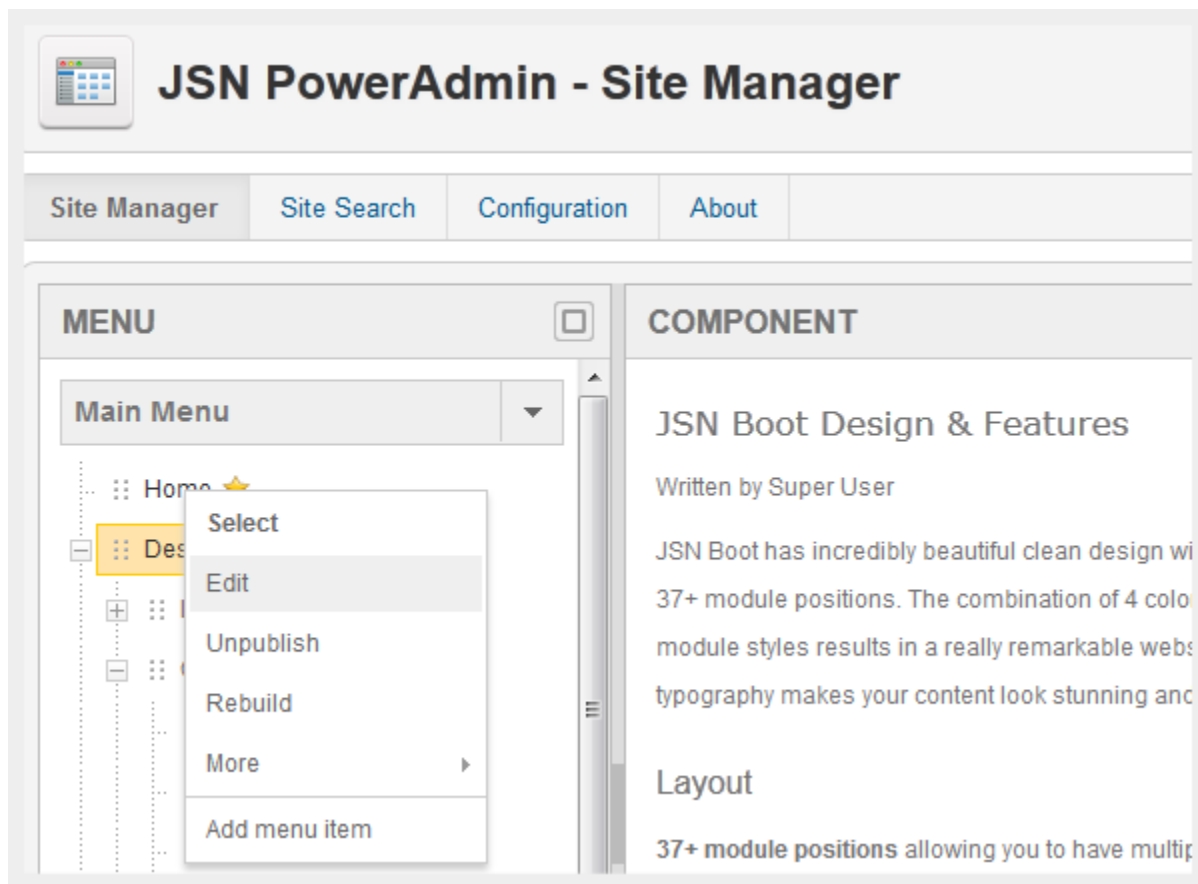

Image Gallery

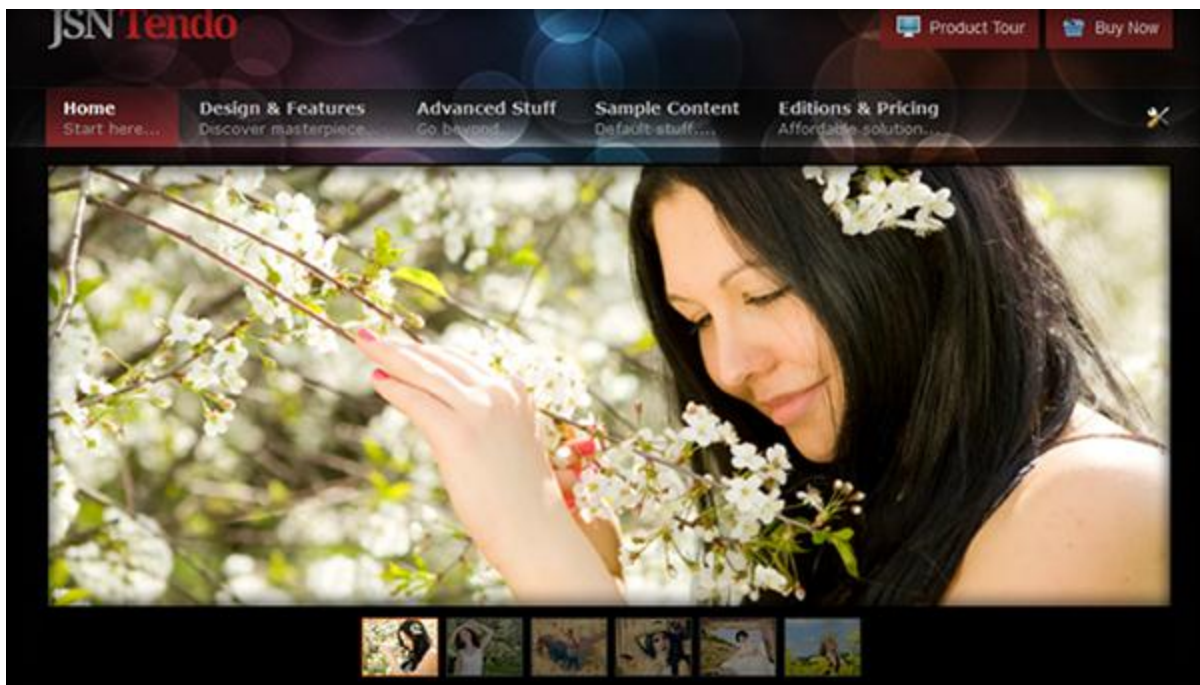

The image gallery you see on our demo website is another cool product **JSN ImageShow** from JoomlaShine.com. This product is shipped with component, module and content plug-in so that you can present a gallery anywhere on every website. With image technology applied, you can be sure the gallery will work consistently in all browsers.

JSN ImageShow is NOT included in the template package, but you can download it separately **for free**.

[Learn more about JSN ImageShow.](#)

Presentation as module

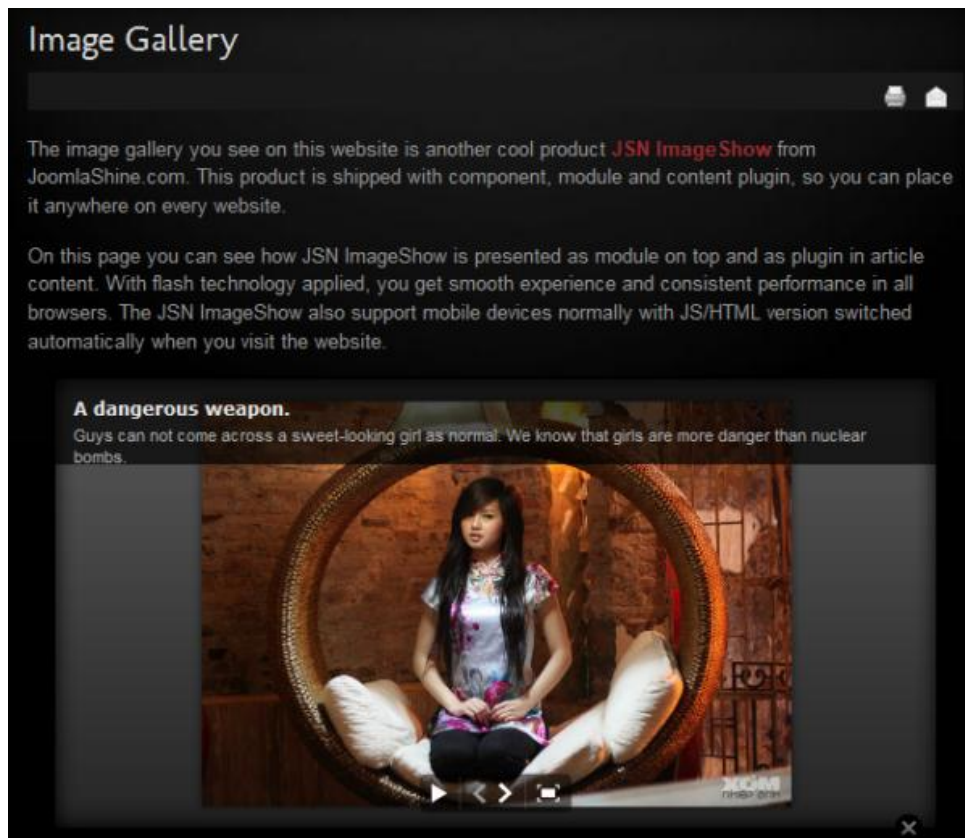

Here you can see how JSN ImageShow is presented as a slideshow module in position **promo**.

JSN ImageShow presented as slideshow module

Presentation as plugin

Here you can see how JSN ImageShow is presented as full featured gallery with thumbnails inside the article.

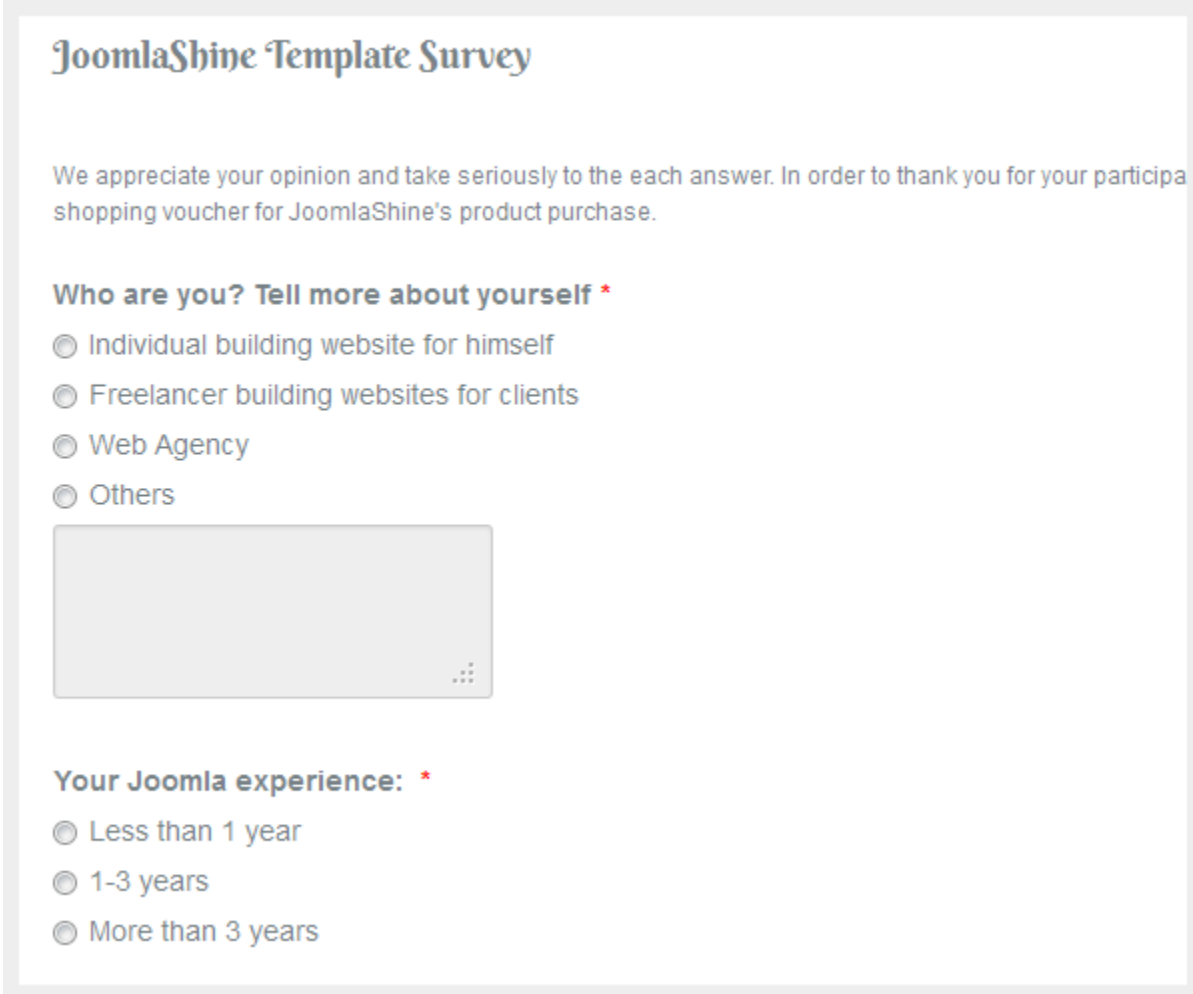

JSN ImageShow presented as gallery in main body content

JSN UniForm

JSN UniForm will bring you the new indulgence since you find out it is the easiest-to-use form extension for your site. Contact us, survey and job application are just some of thousand forms that this single extension can help you to create and control. Besides the intuitive **drag-n-drop operation**, **flexible form presentation** and **multiple pages layout**, JSN UniForm also assists you to deeply understand your collected data with the multiple admins email notification, clean result display or submission filter.

JSN UniForm is NOT included in the template package, but you can download it separately **for free**.

[Learn more about JSN UniForm](#)

The screenshot shows a survey titled "JoomlaShine Template Survey". The text inside the form reads: "We appreciate your opinion and take seriously to the each answer. In order to thank you for your participa shopping voucher for JoomlaShine's product purchase." Below this is a section titled "Who are you? Tell more about yourself *" with four radio button options: "Individual building website for himself", "Freelancer building websites for clients", "Web Agency", and "Others". There is a large empty text area below these options. The next section is titled "Your Joomla experience: *" with three radio button options: "Less than 1 year", "1-3 years", and "More than 3 years".

A survey created by JSN UniForm

Getting Started

Template installation

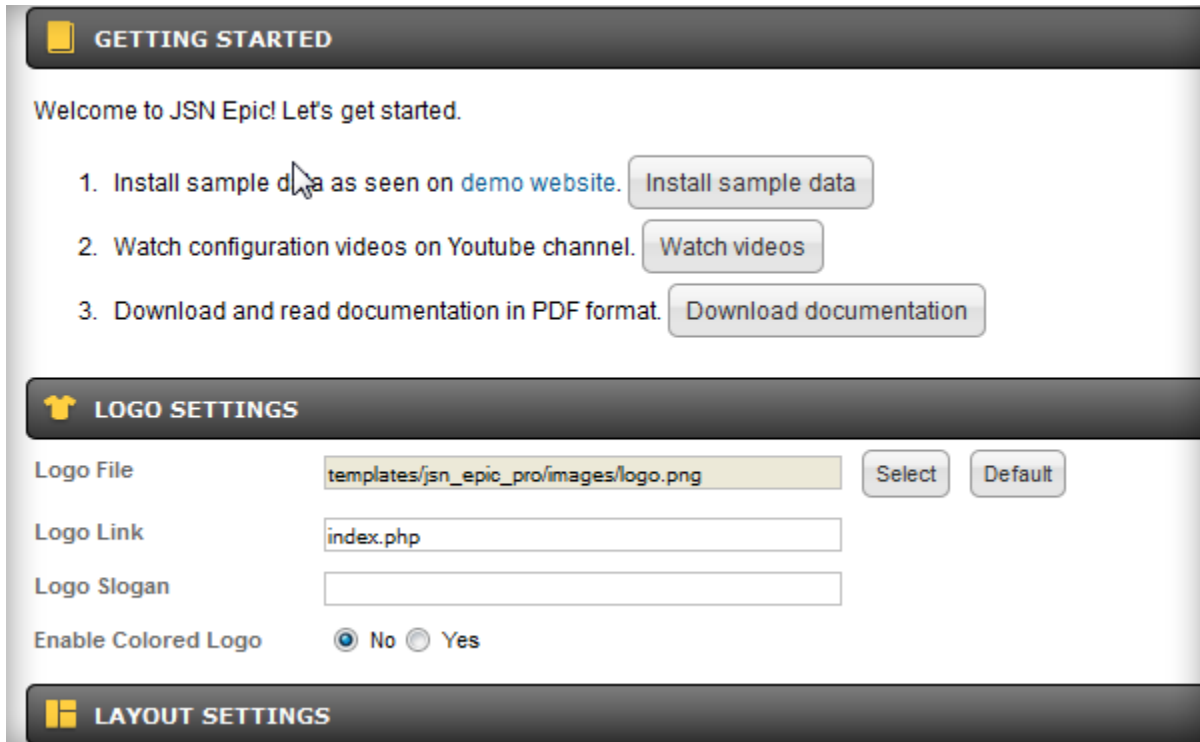

After downloading, you should have a template installation file called **jsn_tendo_XXX_Z.Z.Z_install.zip**, where:

- **XXX** is the template edition. It can be **free** or **pro**.
- **Z.Z.Z** is the template version.

This is a standard Joomla! template installation file which can be installed in Joomla! administration as usual. Here are quick instructions to remind you:

1. In Joomla! administration, go to menu **Extensions** -> **Extension Manager**
2. Once you are on **Extension Manager**, click **Browse** button and select template installation file **jsn_tendo_XXX_Z.Z.Z_install.zip**. After that, click on button **Upload & Install**.
3. Installation file will be uploaded to your server and installed in Joomla!
4. Set the templates as default, go to menu **Extensions** -> **Template Manager**

Template Parameters

The screenshot displays the Joomla! template configuration interface, organized into three distinct panels:

- GETTING STARTED**: This panel includes a welcome message and three numbered steps with corresponding action buttons:
 - Step 1: "Install sample data as seen on demo website." with a button labeled "Install sample data".
 - Step 2: "Watch configuration videos on Youtube channel." with a button labeled "Watch videos".
 - Step 3: "Download and read documentation in PDF format." with a button labeled "Download documentation".
- LOGO SETTINGS**: This panel contains fields for:
 - Logo File**: A text field showing "templates/jsn_epic_pro/images/logo.png" with "Select" and "Default" buttons.
 - Logo Link**: A text field containing "index.php".
 - Logo Slogan**: An empty text field.
 - Enable Colored Logo**: Radio buttons for "No" (selected) and "Yes".
- LAYOUT SETTINGS**: This panel is partially visible at the bottom of the interface.

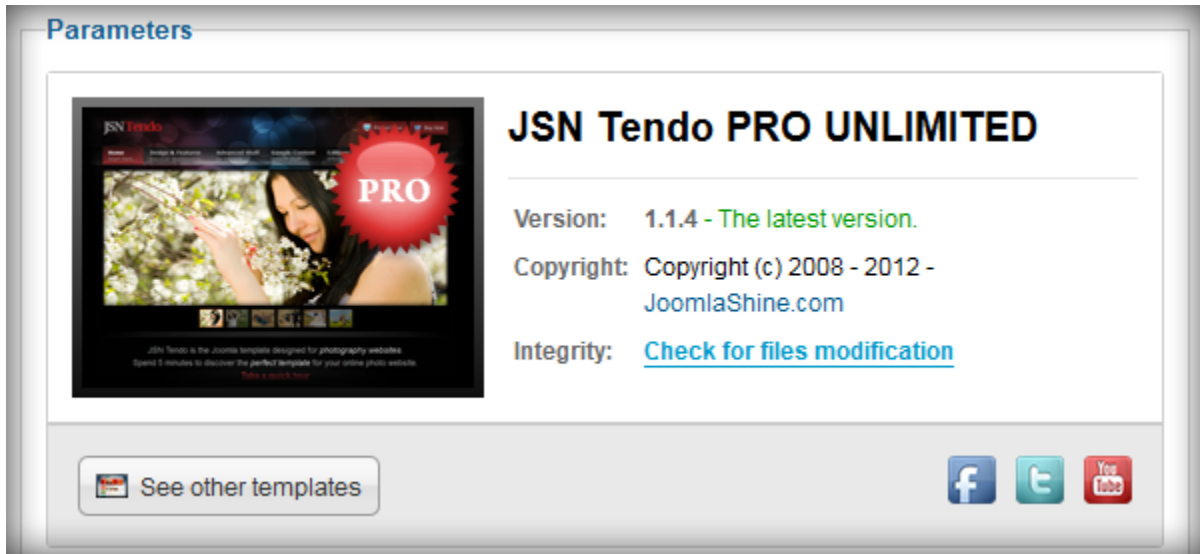

Template parameters logically grouped in panels

All JoomlaShine templates can be effortlessly configured by template parameters. In template setting page, there are **40+ template parameters** arranged into logical groups for convenient operation.

To access template setting page, please take the following steps:

1. Go to the template manager by menu **Extensions** -> **Template Manager**.
2. Click on template name **jsn_tendo_XXX**, where XXX is the template edition you have.
3. Here in the **Template Edit** page, you will see the list of template parameters in section **Parameters**.
4. Click button **Save** to save all changes you've made.

Template Information & Auto Update notification

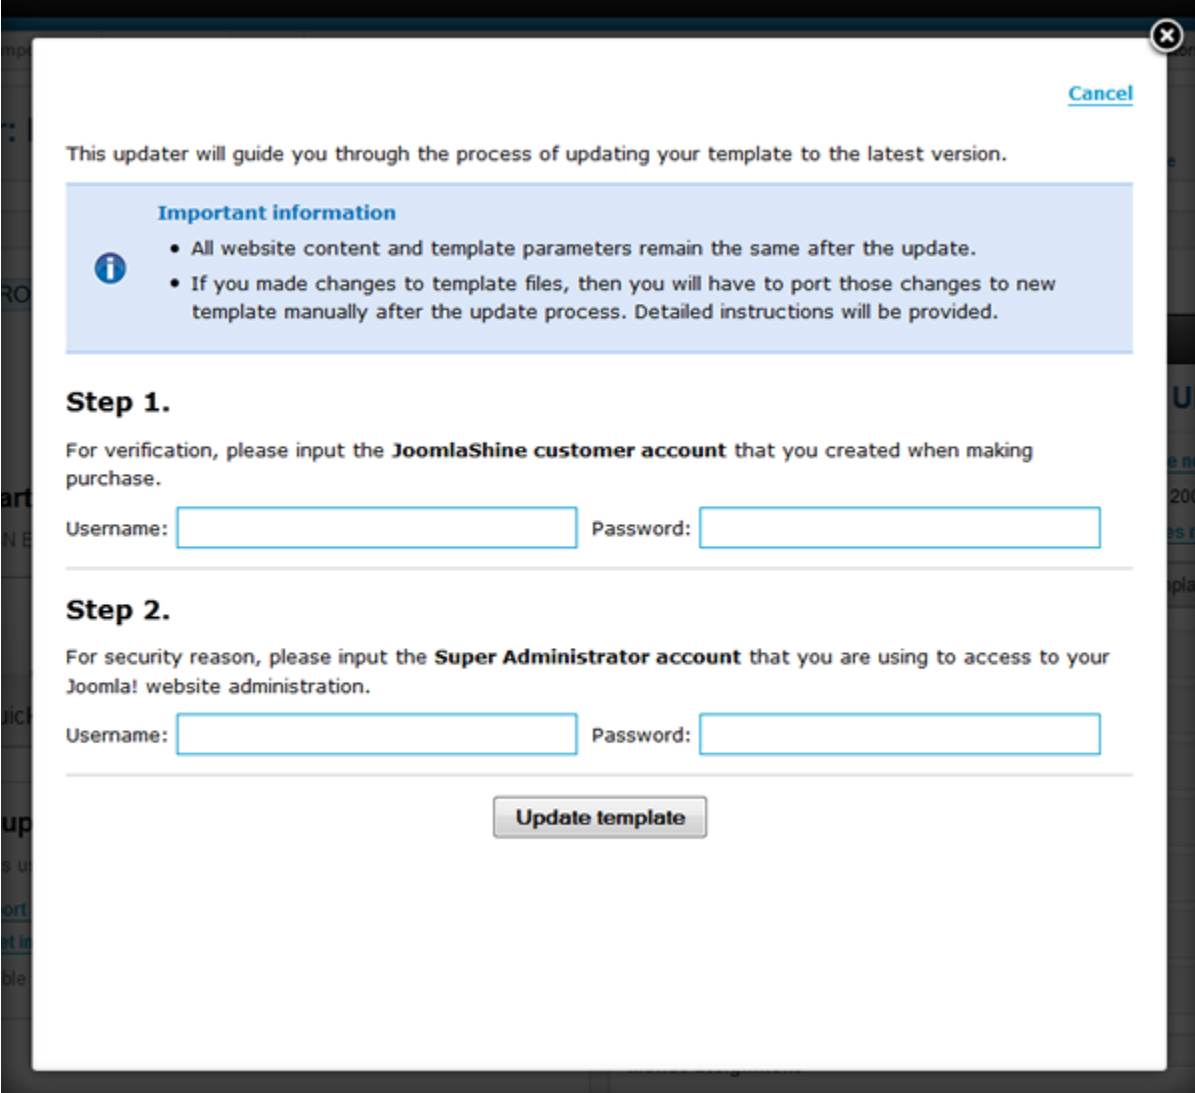

In the first parameter, you can find important information about the latest template version. We really do treat our templates as a piece of software, which needs to be continuously improved. So you should always make sure you are using the latest version.

Also, in this section you can find some other relevant information such as **Author** and **Copyright**.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

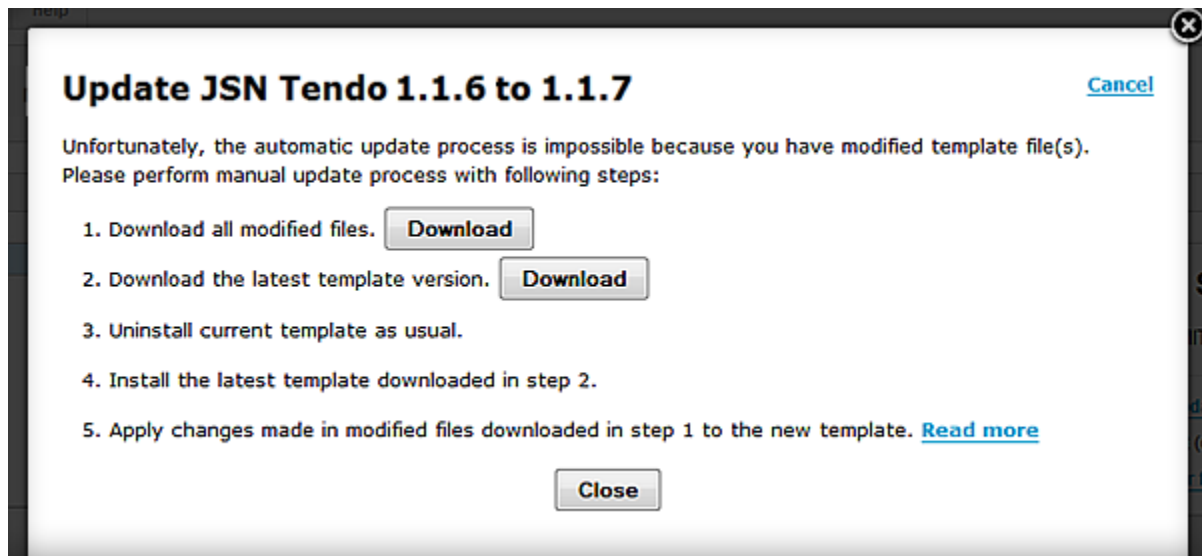

The template automatically checks the latest version available to download. You have to click on the link **Update now**. After that a new modal window appears on your web browser.

In the step 1 you fill the login details of JoomlaShine customer account. For the step 2 you use the login details of Super Administrator account of your website. Then, click on the button **Update template**. Your template would automatically up to date to the latest version.

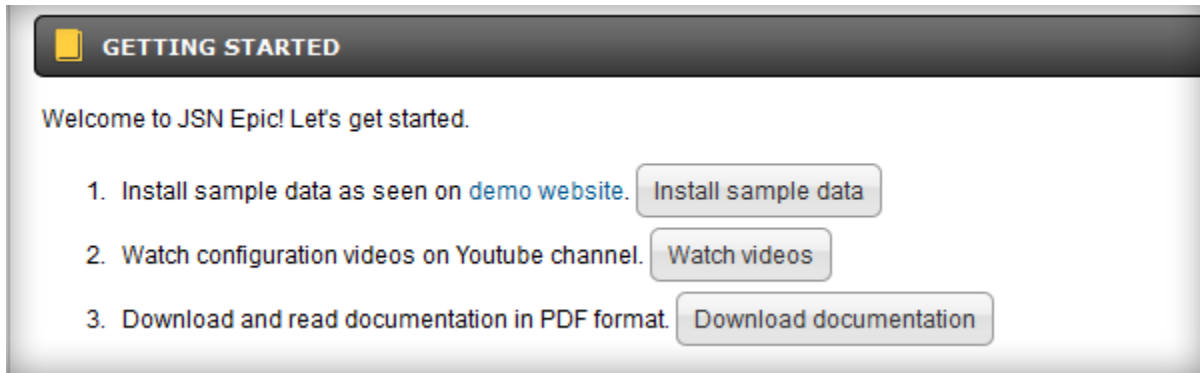

A screenshot of a Joomla! template update modal window. The window has a dark border and a close button (X) in the top right corner. Inside, there's a 'Cancel' link in the top right. The main text says: 'This updater will guide you through the process of updating your template to the latest version.' Below this is a blue box titled 'Important information' containing two bullet points: 'All website content and template parameters remain the same after the update.' and 'If you made changes to template files, then you will have to port those changes to new template manually after the update process. Detailed instructions will be provided.' The window is divided into two steps. 'Step 1.' asks for JoomlaShine customer account details with fields for 'Username:' and 'Password:'. 'Step 2.' asks for Super Administrator account details with fields for 'Username:' and 'Password:'. At the bottom center is a button labeled 'Update template'.

The upgrade process should takes about a minute. After that the window about successful upgrade appears in your web browser.

Please note, if you customized the CSS files of original template, the changes would be lost. The best if you do backup the customized CSS files before the upgrade process. Moreover, if CSS files that you changed are similar to new version updates, a notice browser will appear to remind you that. So, if you receive that message, please follow those steps to update your template.

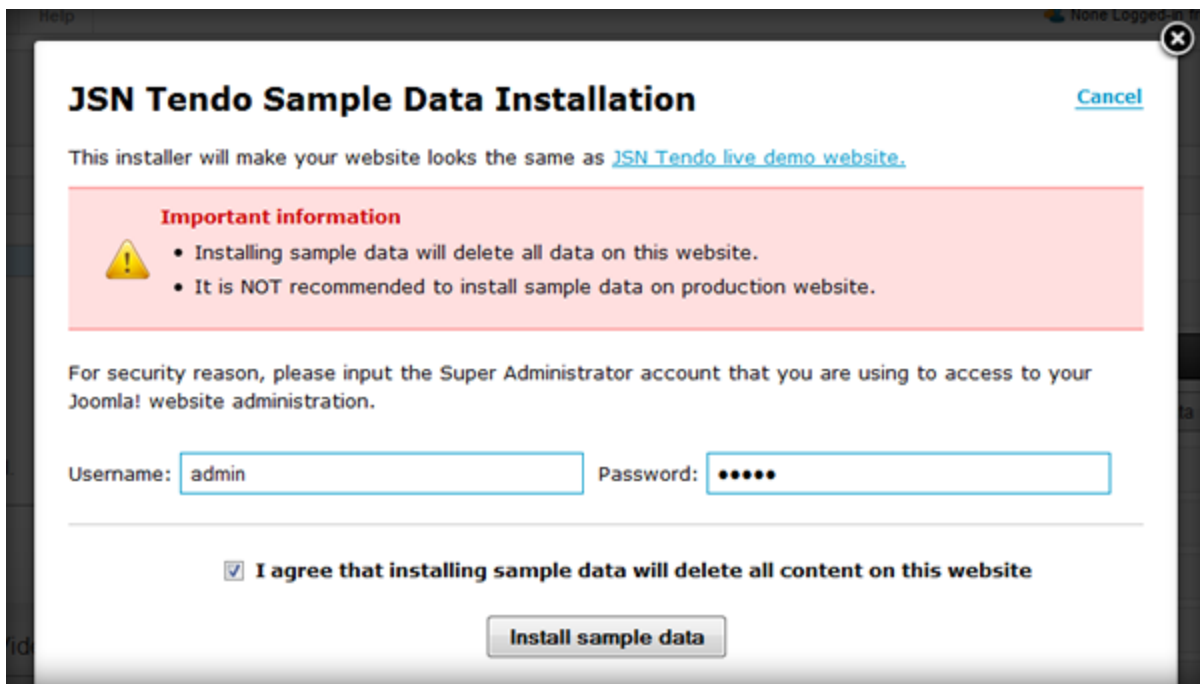

Sample Data Installation

All JoomlaShine templates have unique feature of installing sample data which makes your testing website look the same as on the template demo website. Unlike other template providers who provide a heavy package with all files and database of the demo website, we just give you one single link to install sample data right on your current website.

To install sample data, please take the following steps:

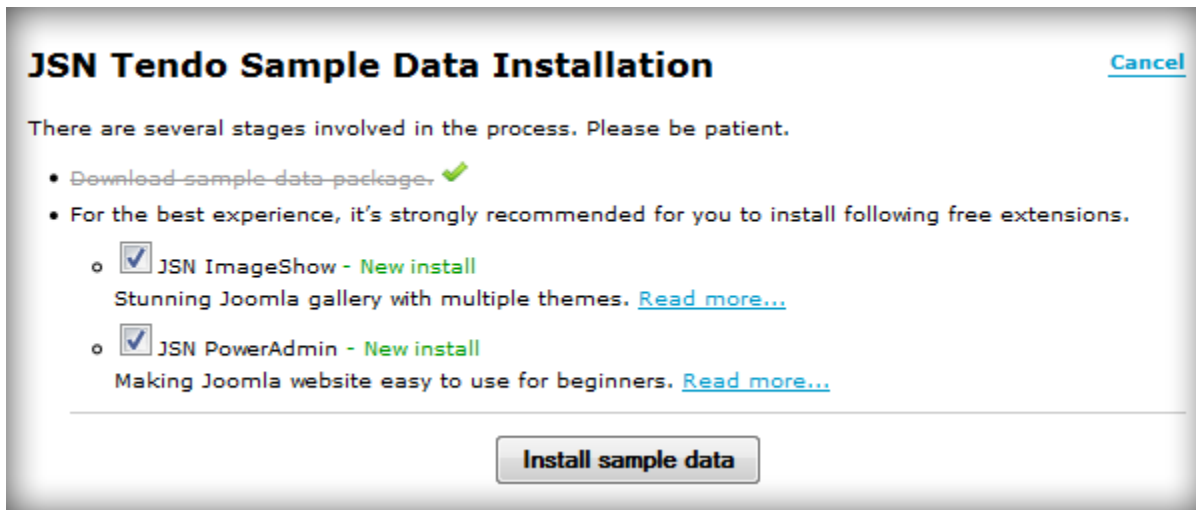

1. First, go to the template settings page, at the parameter **GETTING START**, click **Install sample data** button.
2. Next, on page **JSN Tendo Sample Data Installation** follow on-screen instruction to start the process.

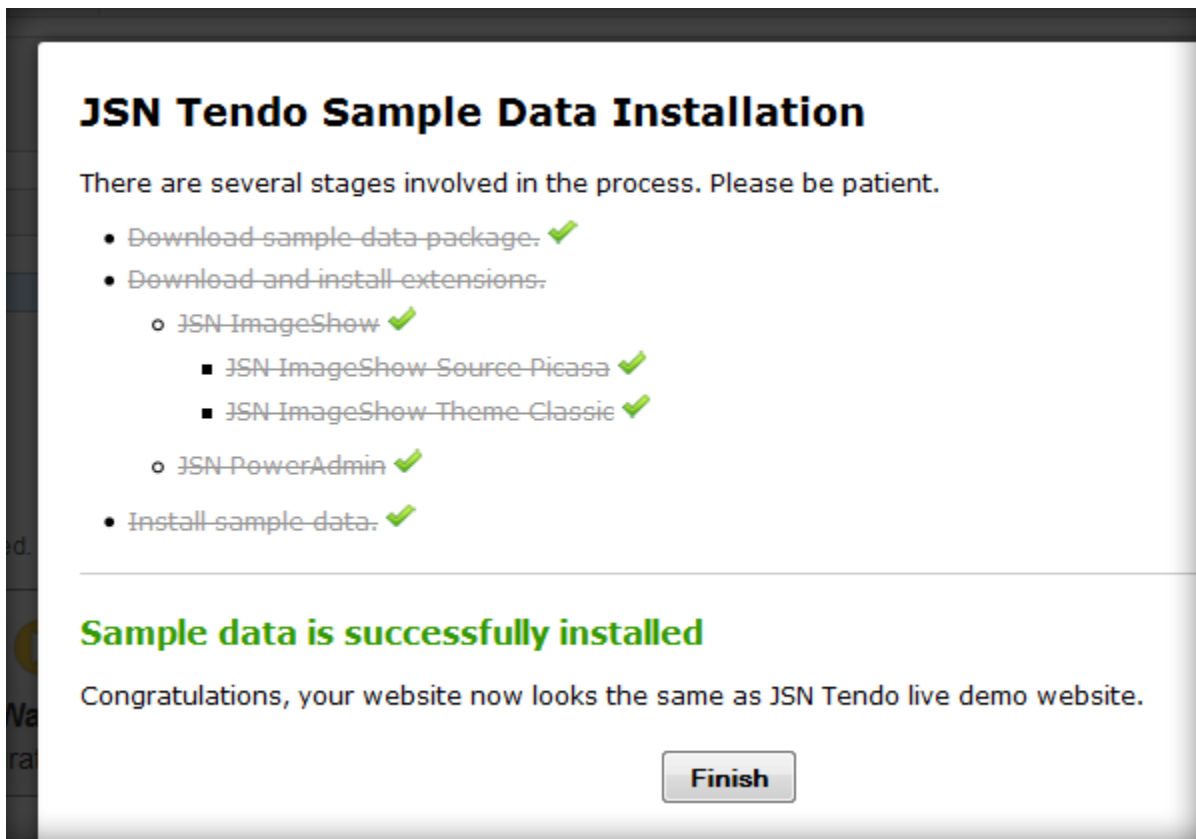

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

3. After that, the Install Sample Data process will work automatically that through two steps :

- **Download sample data package** of the demo website data such as: demo articles, demo menus, demo template settings, etc.
- **Install free extensions:** JSN ImageShow and JSN PowerAdmin. You can install them or not.
- **Install sample data:** this step will check the template version before installing the sample data.

4. Finally, you should click the **Finish** button to **Return to template settings page** for further configuration.

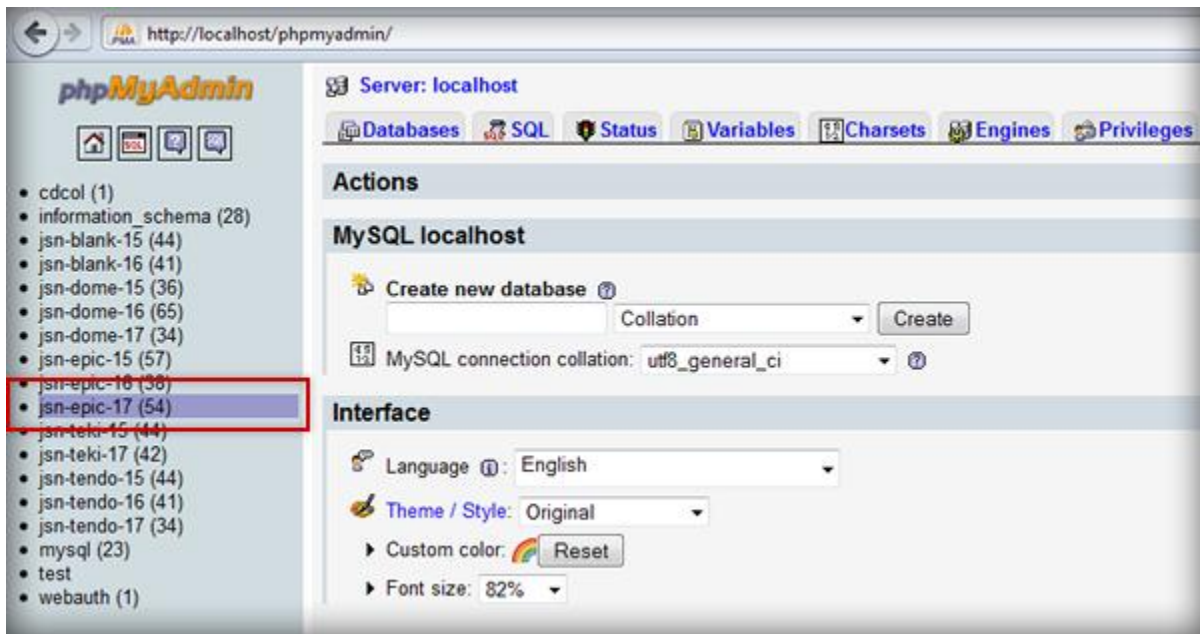

Original data restoration

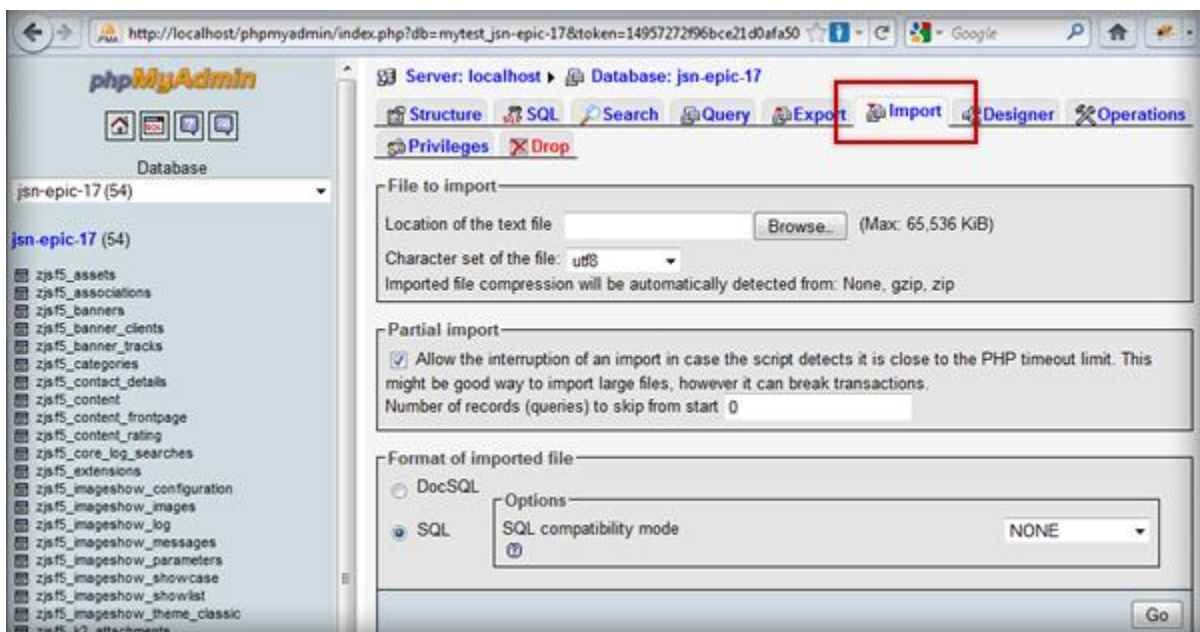

Before the sample data installation process, all original data of your website is automatically backed up into a backup file located in folder **/backup** inside the **joomla_root_folder/templates/jsn_tendo_XXX/**, where **XXX** is the template edition on your server. Technically, this is the zip file which contains a plain text file with SQL instructions that need to be executed on your Joomla! database.

Below are the instructions on how to do that by using software phpMyAdmin 3.2.1.

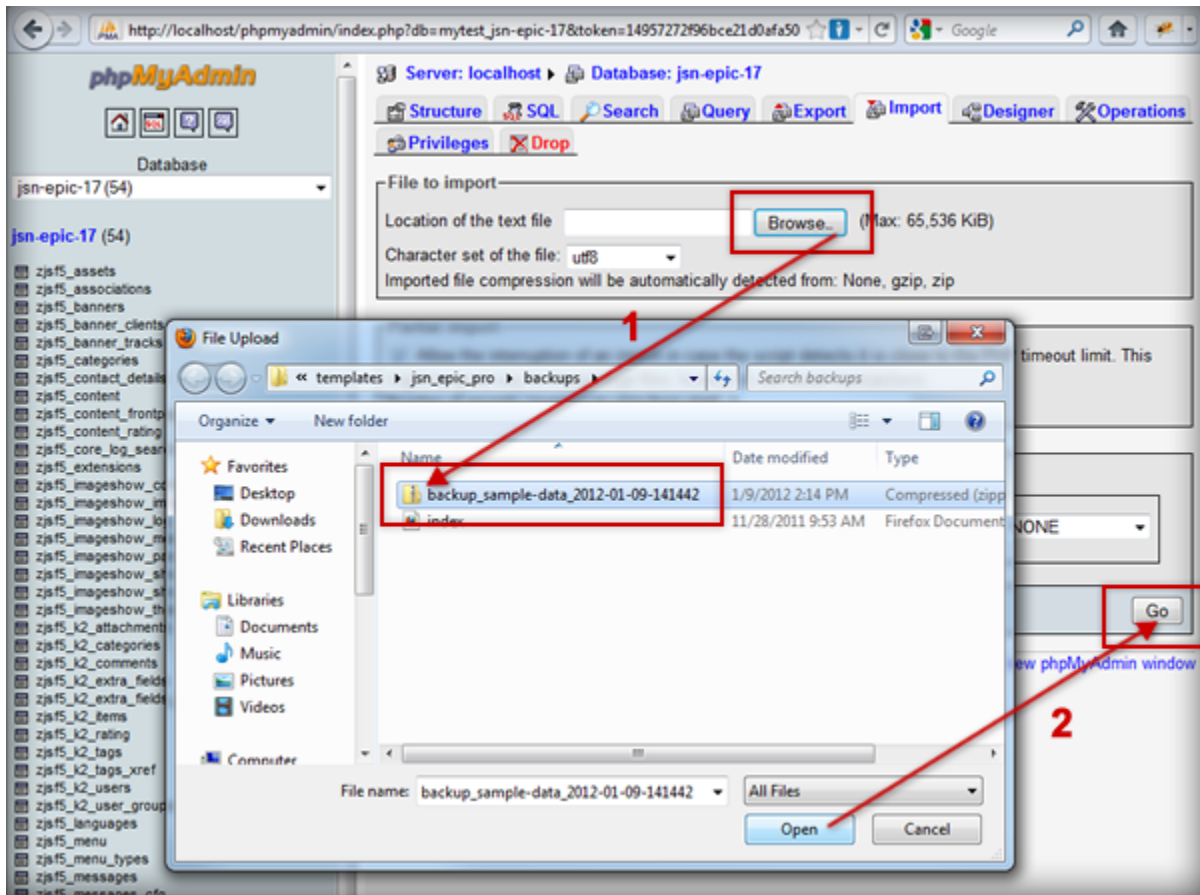

1. First, login to phpMyAdmin and select your Joomla! database on the left column

2. Next, select tab **Import** on the horizontal menu bar

3. Next, click button **Browse..**, then select the backup zip file and click button **Go** at the right corner of the page.

After script execution, you can get back to your website to check how the original data was restored.

Video tutorial

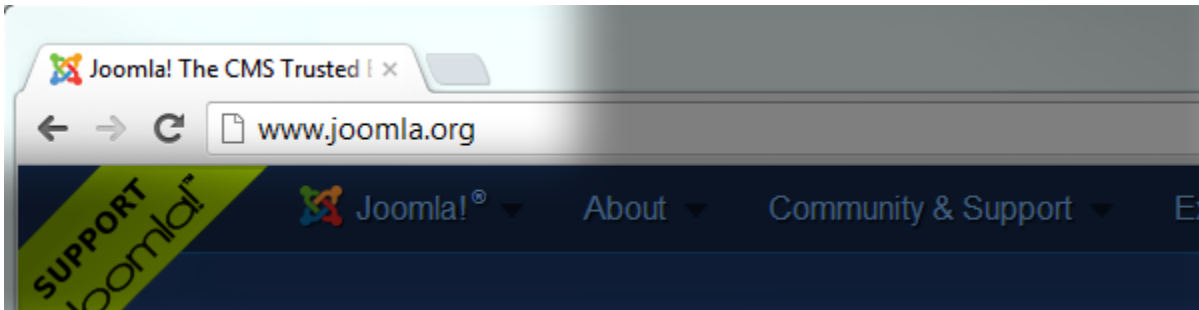

It guides you how to install a JSN template and sample data visually. Here is [video tutorial](#).

JSN Epic in the video is an example and these instructions can be applied to **JSN Tendo** template as well.

Favicon configuration

Favicon is a small icon positioned on the left of the address bar of your browser. By default, Joomla! has an icon as shown on the screenshot below.

Default Joomla! favicon

On your website, you might want to use your own icon, like the one we are using on our site joomlashine.com.

JoomlaShine favicon

Here are instructions on how to do that:

Step 1: Create your own favicon file

Technically, favicon is a regular **16px * 16px** icon file with exact name **favicon.ico**. In most cases, favicon is the sized-down version of the company logo saved in the icon format. In some cases, the logo is too specific and favicon needs to be built from scratch.

You can use some professional icon editor software like [Axialis IconWorkshop](#) and [Iconcool Editor](#) or to use [online favicon generators](#). The first method gives you better quality, but takes more effort. The second method is easier, but the quality is not the best.

Step 2: Upload favicon file to your server

After you got the favicon file, it's time to upload it to your server. You need to upload the icon file to template folder overwriting the default file. This is the folder **joomla_root_folder/templates/jsn_tendo_XXX/**, where **XXX** is the template edition.

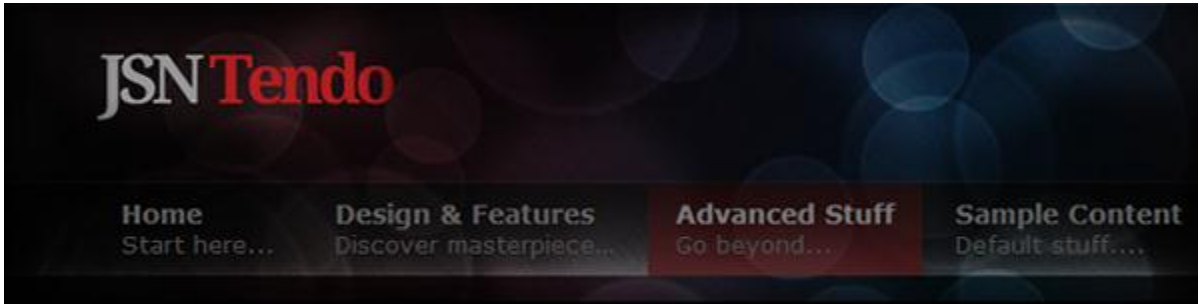

If you have permission problems while using FTP, then we strongly recommend you use a great Joomla! extension called [JoomlaXplorer](#). And you don't need to declare logo width/height anywhere. Template will automatically present it as it is.

If you don't see your new icon, that doesn't necessarily mean you did anything wrong. Browsers are designed to minimize data traffic, so they don't refresh the favicon every time they show a page. Even refreshing the page (**F5**) won't help. So you need to refresh more thoroughly:

- **Mozilla / Firefox / Safari**: hold down Shift while clicking Reload, or press Ctrl-Shift-R (Cmd-Shift-R on Apple Mac)
- **Internet Explorer**: hold Ctrl while clicking Refresh, or press Ctrl-F5
- **Konqueror**: simply click the Reload button, or press F5
- **Opera**: users may need to completely clear their cache in **Tools** -> **Preferences**
- **Chrome**: Shift-F5

If this doesn't work, you will need to delete the temporary internet files and history and then open your page again.

Logo

The logo **JSN Tendo** is the default sample logo and you should replace it with your own. Technically, logo is an image file called **logo.png** located in folder **joomla_root_folder/templates/jsn_tendo_XXX/images/**, where **XXX** the template edition you have.

You can manually choose your own logo file via template parameter **Logo File**. Additionally, you don't need to declare logo width/height anywhere. Template will automatically present it as it is.

When the logo file is ready, you can set up the following parameters:

- **Logo File** - Select the image file you want to use as logo.
- **Logo Link** – Set URL where the logo image should link to. You can set here:
 - Absolute link like **<http://www.joomlashine.com>**
 - Relative link starting from Joomla! root folder like **index.php**

Leave this parameter empty if you do NOT want your logo to be clickable at all.

- **Logo Slogan** – Set the slogan text to be inserted to the logo image attribute **alt**. Text in **alt** attribute is visible to screen readers (good for accessibility) and search engines (good for SEO).
- **Enable Colored Logo** – Define if you want to use special colored logo for each template color. Colored logo file is located under folder **images/colors/{color_name}/** inside the template folder.

Set up rich-media logo via module in position “logo”

JSN Tendo provides a module position called **logo**, where you can put any Custom HTML module with rich-media logo. Another advantage is that you can create multiple modules with different logos and display them in various pages using the menu-module assignment feature in Joomla!.

Attention!

If template detects that there are some module presented in position **logo**, then it will disable default logo with all logo parameters: **Enable Colored Logo**, **Logo Link** and **Logo Slogan**.

Video tutorial

It guides you how to configure logo visually. Here is [video tutorial](#).

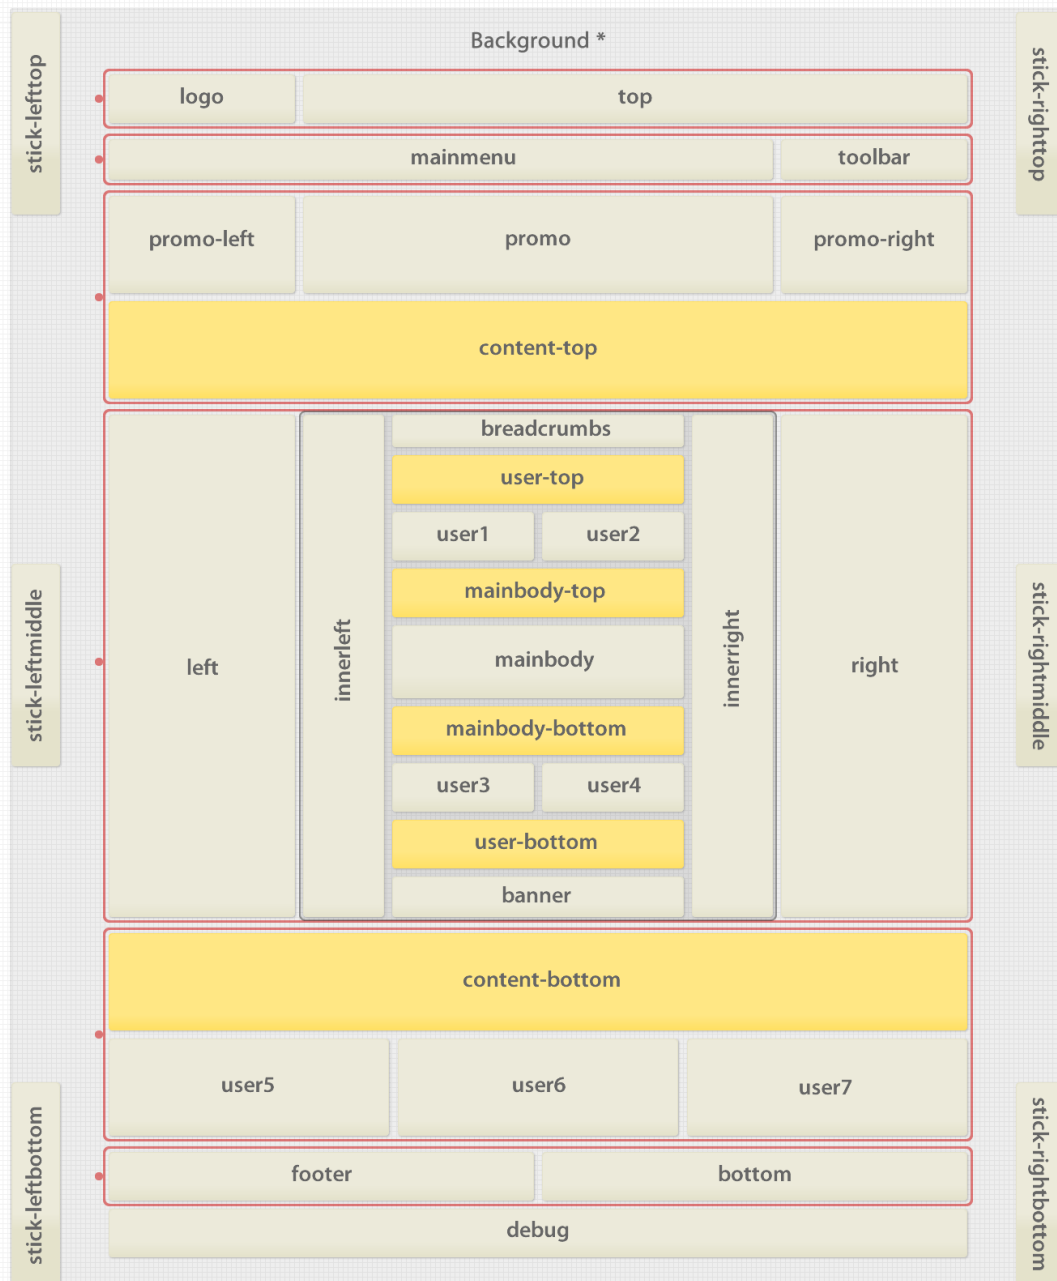

JSN Epic in the video is an example and these instructions can be applied to **JSN Tendo** template as well.

Layout

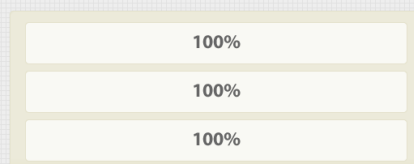

Module positions

JSN Tendo provides **37+ module positions** allowing you to have multiple layout configurations. All module positions are collapsible which means if you don't use all the positions they will be left as blank for neighboring modules.

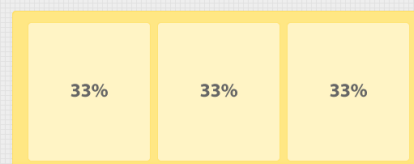

JOOMLASHINE TEMPLATE FULL LAYOUT

Position with modules arranged in **vertical** layout

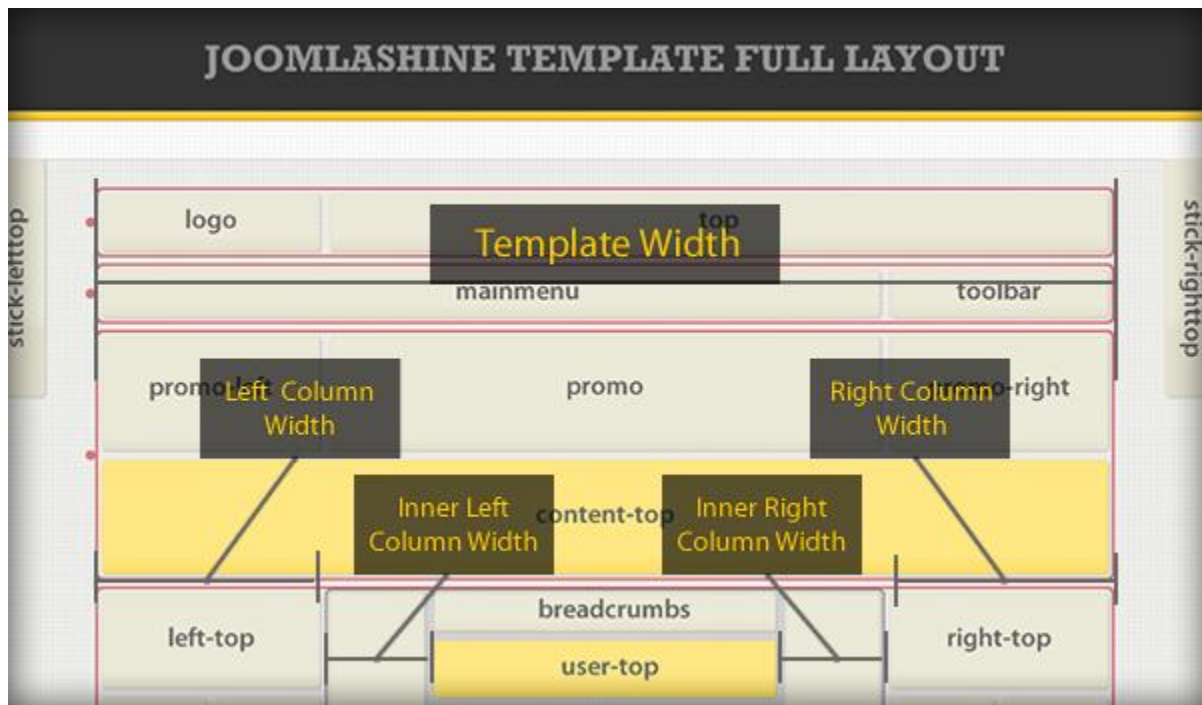

Position with modules arranged in **horizontal** layout

(*) The background is set as a module position for easy customization

Layout dimensions

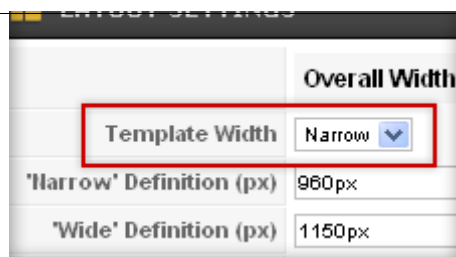

JSN Tendo allows you to change the width size of several critical layout elements. All settings can be done via template parameters in the section **LAYOUT SETTINGS**.

Template Width

Template width can be configured in three different ways.

Configuration by template parameter (lowest priority)

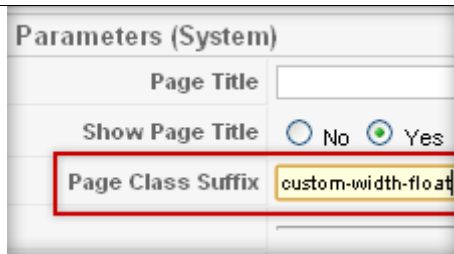

Template width can be set by template parameter **Template Width**. There are three options for you to choose:

- **Narrow** – Template width is fixed in pixels defined in parameter **'Narrow' Definition (px)**.
- **Wide** - Template width is fixed in pixels defined in parameter **'Wide' Definition (px)**.
- **Float** - Template width is floated with percentage defined in parameter **'Float' Definition (%)**.

This is the default setting and has the lowest priority.

Configuration by "Page Class" (higher priority)

Template width can be set by **Page Class** of a menu item with syntax **custom-width-xxx**, where **xxx** is the width value you choose.

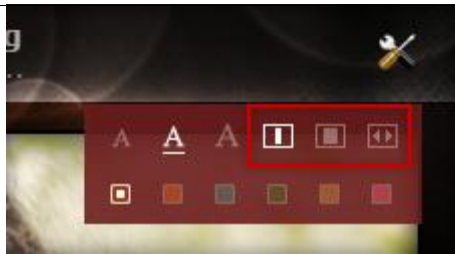

There are the following possible values: **narrow**, **wide** and **float**.

For example:

- **custom-width-float**

This setting will override the default settings by template parameter *Template Width*.

Configuration by Site tools panel (top priority)

Template color can be selected by **Width Selector** from **Site tools**.

This setting is considered as the visitor's preference and has top priority. It will overwrite both *Page Class* and default settings of parameter *Template Width*.

Promo Left Width

You can configure the width of module position **promo-left** in the following two ways:

1. By template parameter **Promo Left Width**. This is the default setting and has the lowest priority.
2. By **Page Class** of menu item with syntax **custom-promoleftwidth-xx**, where **xx** is the width value you want to have. For example: **custom-promoleftwidth-30**

Parameter value can be specified only in integer, for example **25%** is correct, but **25.5%** is incorrect.

Promo Right Width

You can configure the width of module position **promo-right** in the following two ways:

1. By template parameter **Promo Right Width**. This is the default setting and has the lowest priority.
2. By **Page Class** of menu item with syntax **custom-promorightwidth-xx**, where **xx** is the width value you want to have. For example: **custom-promorightwidth-30**

Parameter value can be specified only in integer, for example **25%** is correct, but **25.5%** is incorrect.

Left Column Width

You can configure the left column width in the following two ways:

1. By template parameter **Left Column Width**. This is the default setting and has the lowest priority.
2. By **Page Class** of a menu item with syntax **custom-leftwidth-xx**, where **xx** is the width value you want to have. For example: **custom-leftwidth-30**

Parameter value can be specified only in integer, for example **25%** is correct, but **25.5%** is incorrect.

Right Column Width

You can configure the left column width in the following two ways:

1. By template parameter **Right Column Width**. This is the default setting and has the lowest priority.
2. By **Page Class** of a menu item with syntax **custom-rightwidth-xx**, where **xx** is the width value you want to have. For example: **custom-rightwidth-30**

Parameter value can be specified only in integer, for example **25%** is correct, but **25.5%** is incorrect.

Inner Left Column Width

You can configure the inner left column width in the following two ways:

1. By template parameter **Inner Left Column Width**. This is the default setting and has the lowest priority.
2. By **Page Class** of a menu item with syntax **custom-innerleftwidth-xx**, where **xx** is the width value you want to have. For example: **custom-innerleftwidth-30**

Parameter value can be specified only in integer, for example **25%** is correct, but **25.5%** is incorrect.

Inner Right Column Width

You can configure the inner right column width in the following two ways:

3. By template parameter **Inner Right Column Width**. This is the default setting and has the lowest priority.
4. By **Page Class** of a menu item with syntax **custom-innerrightwidth-xx**, where **xx** is the width value you want to have. For example: **custom-innerrightwidth-30**

Parameter value can be specified only in integer, for example **25%** is correct, but **25.5%** is incorrect.

Main Body on Frontpage

Some websites do not use the **main body** content area in the **Frontpage**, just modules. So JSN Tendo creates this parameter for you can control the display of main body flexibly.

Select **No** if you want to hide the main body only in home page. And select **Yes** to show it in all pages normally.

Stick Positions

The template layout includes 6 stick positions: **stick-lefttop**, **stick-leftmiddle**, **stick-leftbottom**, **stick-righttop**, **stick-rightmiddle**, and **stick-rightbottom**. You can assign any modules or create custom HTML module into mentioned positions for better website presentation. The module “sticks” into your layout, so when you scroll mouse up and down, the assigned module is moved in appropriate direction.

Let's see how we can create a custom HTML module then place it in the stick-lefttop position.

1. In Joomla Administration you go to **Extensions -> Module Manager**
2. Click on a button **New** then choose **Custom HTML**
3. Fill the settings:
 - **Title:** My stick module
 - **Show Title:** No
 - **Published:** Published
 - **Position:** stick-lefttop
 - **Customer Output:** Type HTML code into this field

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Above, we created a new module then assigned to the position stick-lefttop. You can assign a module to the rest 5 stick positions: **stick-leftmiddle, stick-leftbottom, stick-righttop, stick-rightmiddle, stick-rightbottom**.

Video tutorial

It guides you how to configure layout visually. Here is [video tutorial](#).

JSN Epic in the video is an example and these instructions can be applied to **JSN Tendo** template as well.

Mobile settings

All JoomlaShine templates are equipped with responsive design feature making your website look beautiful in both smartphones and tablets.

Enable Mobile Support **PRO**

To enable responsive design feature just set the parameter **Enable Mobile Support** to **Yes**.

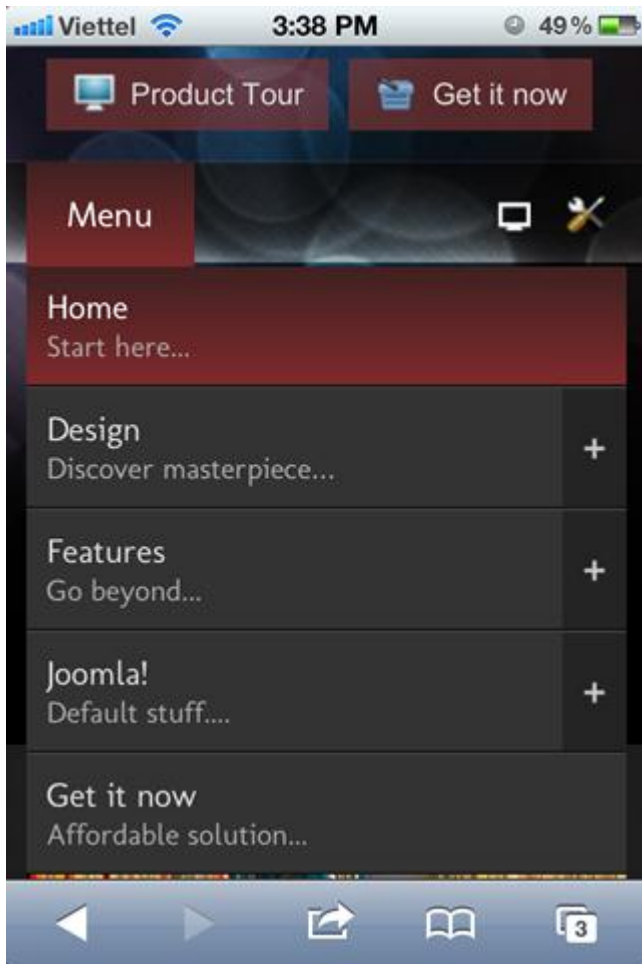

The image shows a Joomla! configuration window titled "MOBILE SETTINGS" with a mobile phone icon. It contains four settings: "Enable Mobile Support" (radio buttons for No and Yes, with Yes selected), "Enable Mobile Menu Sticky" (radio buttons for No and Yes, with Yes selected), "Show Desktop Switcher" (radio buttons for No and Yes, with Yes selected), and "Mobile Logo File" (a text input field containing "templates/jsn_tendo_pro/images/logo-m.png" and "Select" and "Default" buttons).

Mobile settings

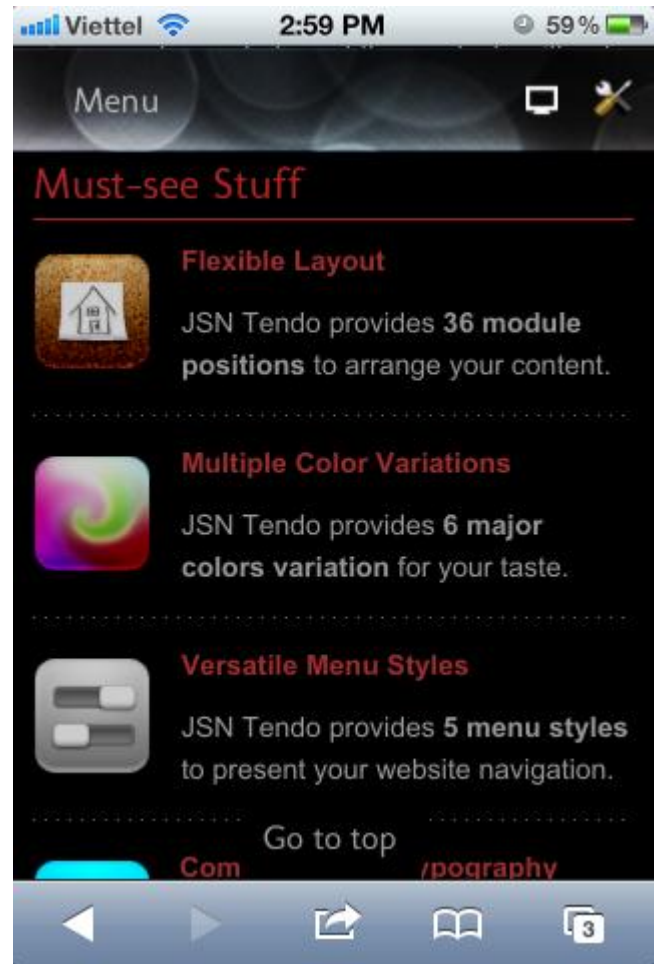

After that all modules will be automatically rearranged to fit client device screen.

- If the client device is a smartphone like iPhone or Android-based phone, all content will be arranged in 1 column.
- If the client device is a tablet like iPad, Kindle Fire, etc, all content will be arranged in 2 columns.

Also, main menu will be transformed into compact dropdown menu.

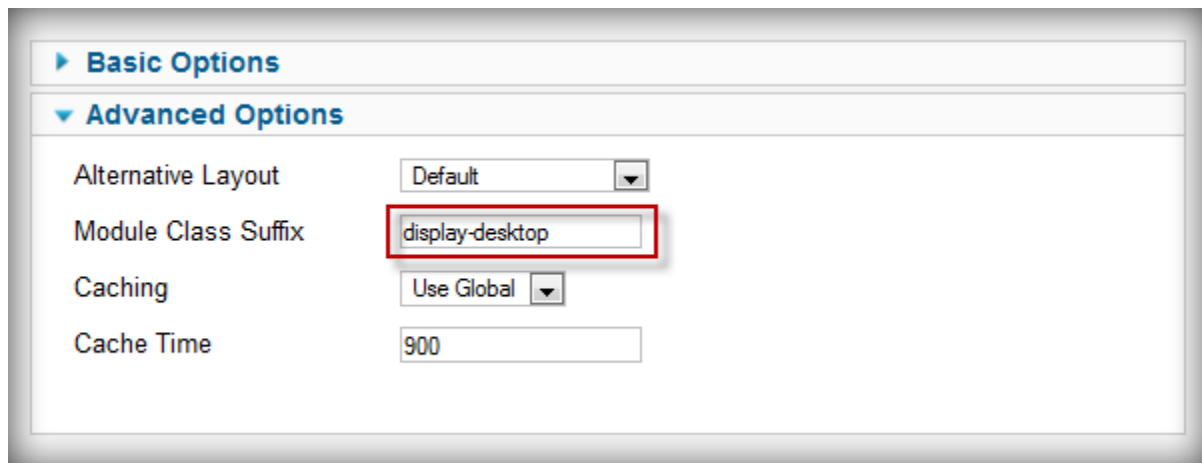

Opened mobile menu

1-column module

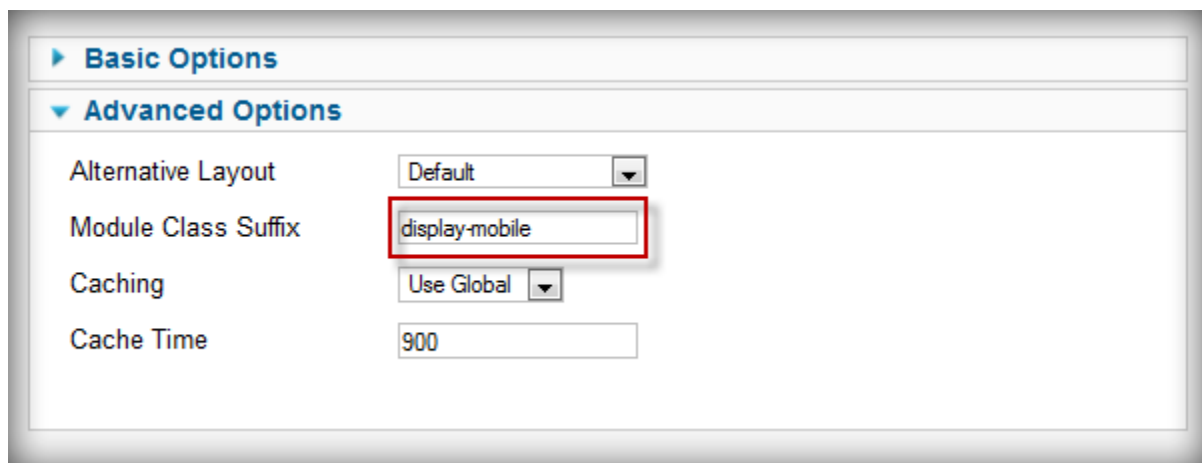

As default, all modules will be displayed on both desktop and mobile. To display a module on only desktop or on only mobile, add **Module Class Suffix** parameter as following:

- Display a module on only desktop: **display-desktop**

The screenshot shows the Joomla! configuration interface. At the top, there are two tabs: 'Basic Options' and 'Advanced Options'. The 'Advanced Options' tab is selected. Below the tabs, there are four configuration options: 'Alternative Layout' (set to 'Default'), 'Module Class Suffix' (set to 'display-desktop'), 'Caching' (set to 'Use Global'), and 'Cache Time' (set to '900'). The 'Module Class Suffix' field is highlighted with a red rectangular box.

- Display a module on only mobile: **display-mobile**

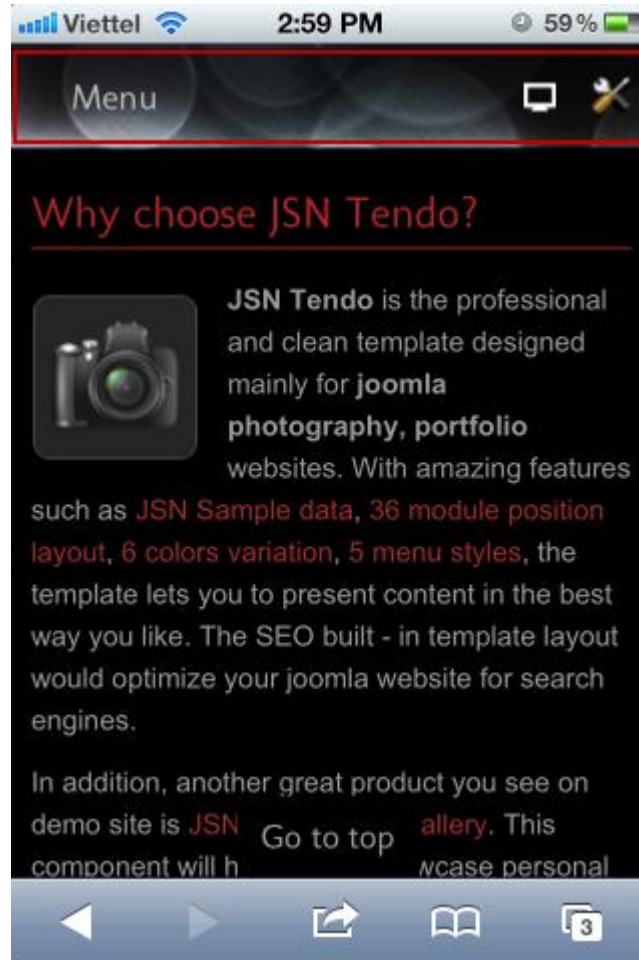

The screenshot shows the Joomla! configuration interface, similar to the one above. The 'Advanced Options' tab is selected. The 'Module Class Suffix' field is now set to 'display-mobile' and is highlighted with a red rectangular box. The other options remain the same: 'Alternative Layout' (Default), 'Caching' (Use Global), and 'Cache Time' (900).

Enable Mobile Menu Sticky

With **Mobile Menu Sticky**, the menu will appear anytime. This will help you control all menus easily.

To enable this feature, just set the parameter **Enable Mobile Menu Sticky** to **Yes**.

Enable Mobile Menu Sticky

Show Desktop Switcher **PRO**

By using parameter **Show Desktop Switcher** you can configure to show button to allow your website visitor to jump back to desktop layout.

Desktop Switcher

Mobile Logo File **PRO**

Normally, the default logo will be automatically resized and displayed nicely in mobile layout. But if you want to have specifically designed logo, then you can select it thru parameter **Mobile Logo File**.

Mobile Logo File

Colors Variation

Template Color **PRO**

JSN Tendo provides **six major color variations** for you to choose from. Each color variation covers not only the main background, but also fills drop-down menu, links, table's header and some others.

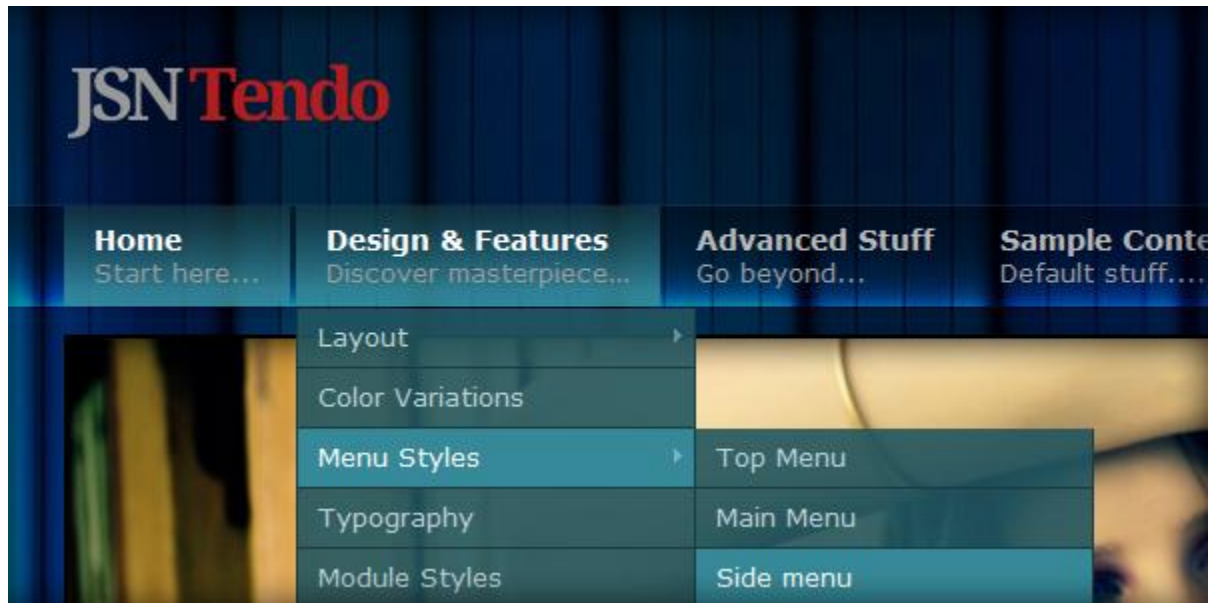

All available colors are described below.

Red

Orange

Cyan

Green

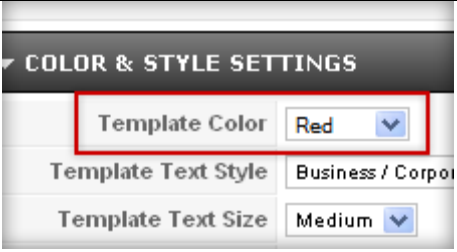

Yellow

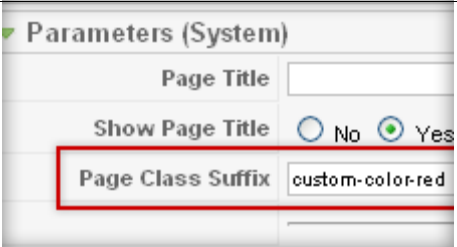

Pink

Template color can be configured in three different ways.

Configuration by template parameter (lowest priority)

 A screenshot of the Joomla! template configuration interface. The 'COLOR & STYLE SETTINGS' section is visible. The 'Template Color' dropdown menu is highlighted with a red box and is set to 'Red'. Other settings like 'Template Text Style' (Business / Corporate) and 'Template Text Size' (Medium) are also visible.	<p>Template color can be set by template parameter Template Color.</p> <p>This is the default setting and has the lowest priority.</p>
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------

Configuration by "Page Class" (higher priority)

 A screenshot of the Joomla! template configuration interface. The 'Parameters (System)' section is visible. The 'Page Class Suffix' field is highlighted with a red box and contains the text 'custom-color-red'. Other settings like 'Page Title' and 'Show Page Title' are also visible.	<p>Template color can be set by Page Class of a menu item with syntax custom-color-xxx, where xxx is the color you want to have.</p> <p>There are the following possible values: orange, red, cyan, green, yellow and pink.</p> <p>For example:</p> <ul style="list-style-type: none">• custom-color-red <p>This setting will override the default settings by template parameter <i>Template Color</i>.</p>
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Configuration by Site tools panel (top priority)

 A screenshot of the Joomla! Site tools panel. The 'Color Selector' is highlighted with a red box. It shows a row of color swatches: white, orange, red, cyan, green, yellow, and pink. The red swatch is currently selected.	<p>Template color can be selected by Color Selector from Site tools.</p> <p>This setting is considered as the visitor's preference and has top priority. It will overwrite both <i>Page Class</i> and default settings of parameter <i>Template Color</i>.</p>
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Video tutorial

It guides you how to configure colors visually. Here is [video tutorial](#).

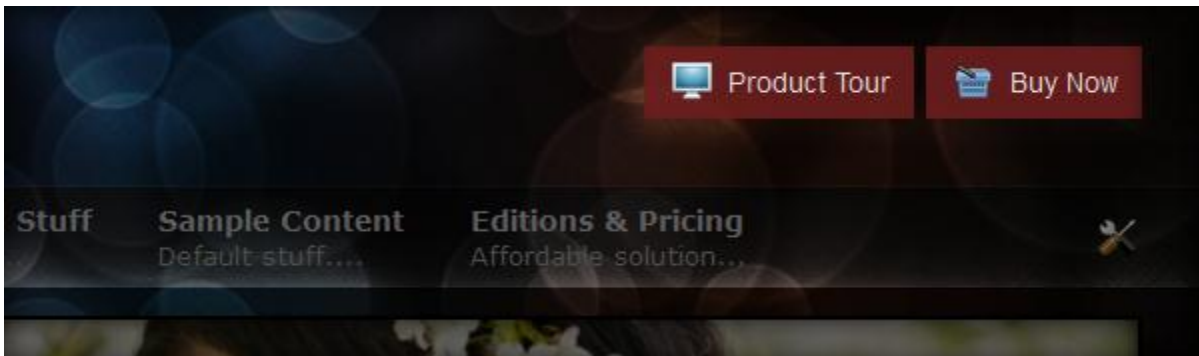

JSN Epic in the video is an example and these instructions can be applied to **JSN Tendo** template as well.

Menu Styles

JSN Tendo provides **five menu styles** to present your website navigation. The default Joomla! built-in menu module (**mod_mainmenu**) is utilized, so you don't need to install any external menu modules.

Top Menu

Top Menu allows you to arrange menu items in horizontal lines and assign icons to them. All icons are configured directly in the menu item settings page which is very convenient.

To set up Top Menu please select the menu module you want to use and set up parameters as follows:

- Title: **Top Menu** (*or any other you like*)
- Show title: **Hide**
- Position: **top**
- Access: **public**
- Language: **All**
- Select Menu: **Top Menu** (*you might want to use another sources here*)
- Start Level: **1**
- End Level: **2**
- Show sub-menu items: **No**
- Menu Class Suffix: **menu-topmenu menu-iconmenu**

Attention!

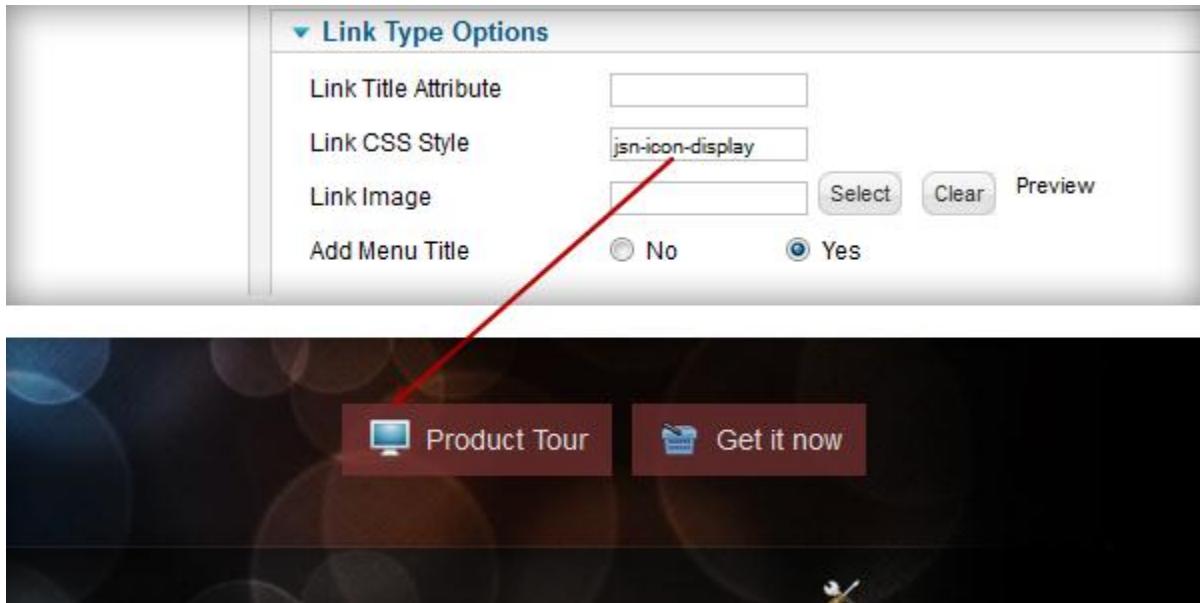

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

Top Menu icons **PRO**

You can attach any of the **UniIcons** to top menu items to make them more appealing. **UniIcons** is the set of **20 predefined icons** that can be used for multiple purposes. For more information about the available icons and their names, please read section **UniIcons** of this document.

To set up icons, you need to go to menu item settings and do take the following steps:

Add symbol combination **jsn-icon-xxx** to menu item's parameter **Link CSS Style**, where **xxx** is the icon name.

Main Menu

Main Menu is very a powerful menu built with clean accessible XHTML code structure and effective drop-down submenu panels.

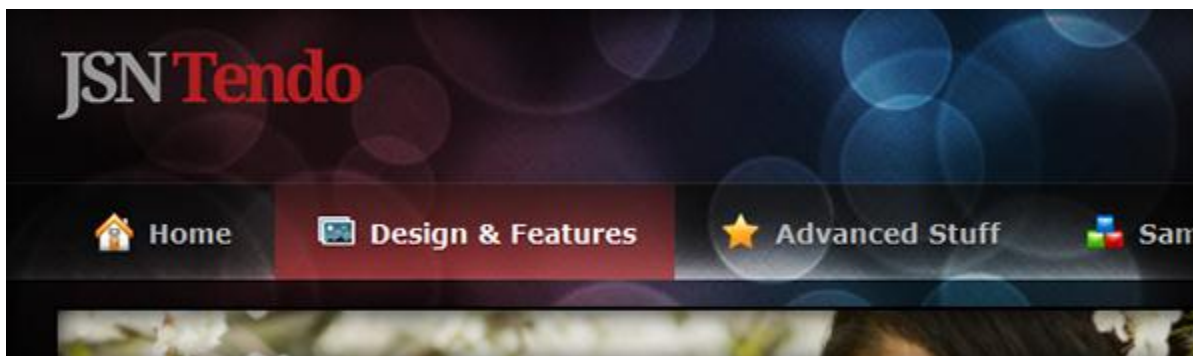

To set up Main Menu please select the menu module you want to use and set up parameters as follows:

- Title: **Main Menu** (or any other you like)
- Show title: **Hide**
- Position: **mainmenu**
- Access: **public**
- Language: **All**
- Select Menu: **Main Menu** (you might want to use another menu source here)
- Start Level: **1**
- End Level: **All**
- Show Sub-menu Items: **Yes**
- Menu Class Suffix: **menu-mainmenu menu-iconmenu menu-richmenu**

Attention!

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

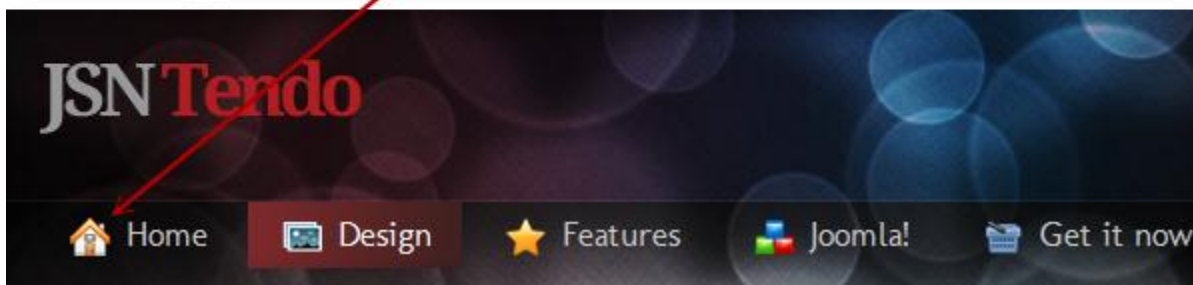

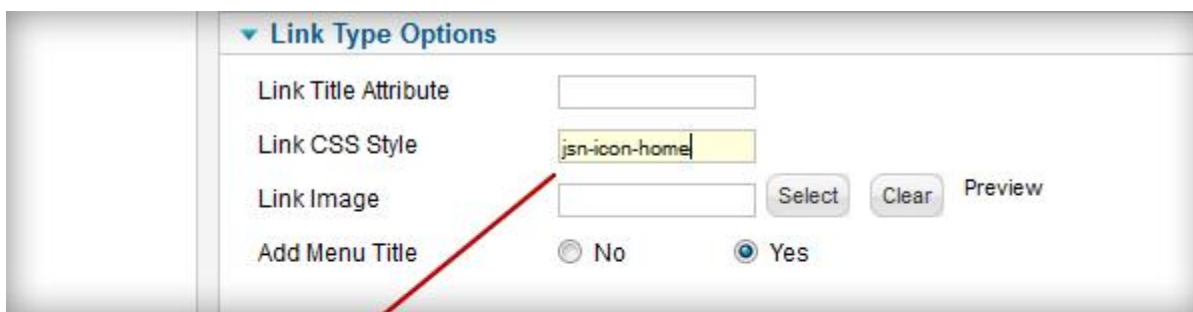

Main Menu Icons **PRO**

You can attach any of the **UniIcons** to menu items to make them more appealing.

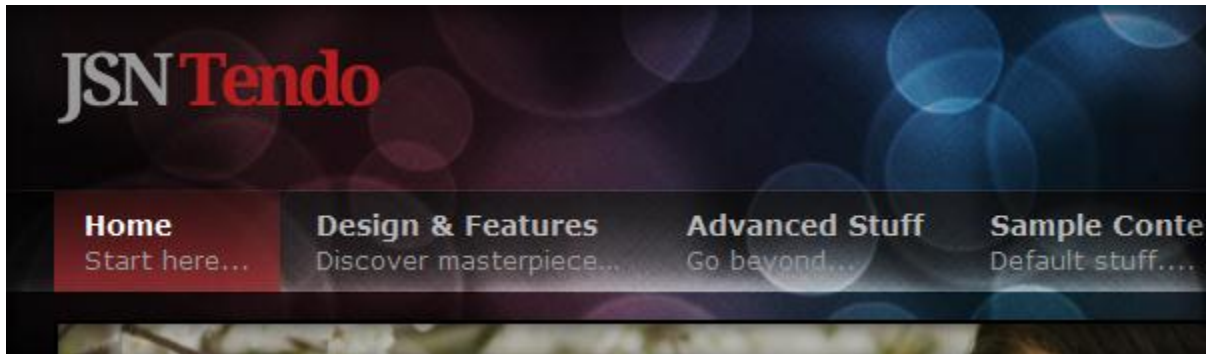

To set up icons, you need to go to menu item settings and take the following steps:

Add symbol combination **jsn-icon-xxx** to menu item's parameter **Link CSS Style**, where **xxx** is the icon name.

UniIcons is the set of **20 predefined icons** that can be used for multiple purposes. For more information about available icons and their names, please read section **UniIcons** of this document.

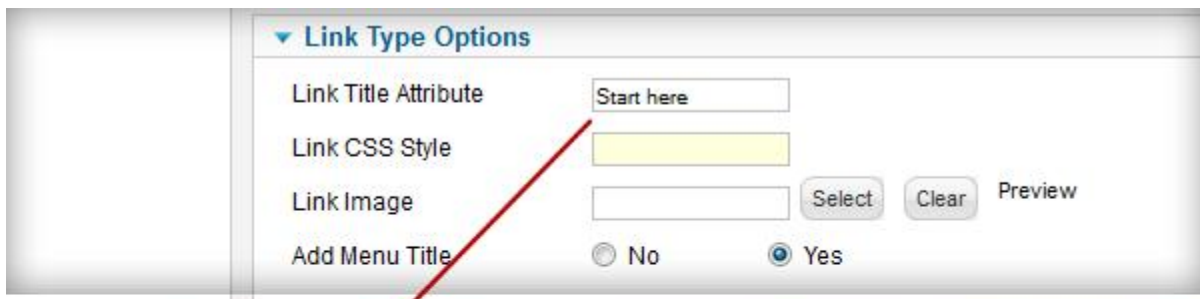

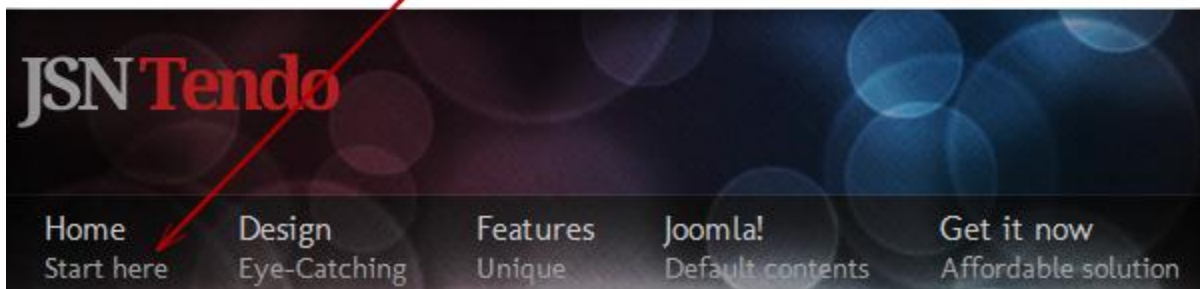

Main Menu Rich Text **PRO**

You can add descriptive text to menu items to make them much clearer.

To set up descriptive text, you need to go to menu item settings and do take the following steps:

Add descriptive text to menu item's parameter **Link Title Attribute**.

This is a screenshot of the Joomla! administrator interface for editing a menu item. The 'Link Type Options' section is expanded. It contains four fields: 'Link Title Attribute' with the value 'Start here', 'Link CSS Style' with an empty yellow field, 'Link Image' with an empty field and 'Select', 'Clear', and 'Preview' buttons, and 'Add Menu Title' with radio buttons for 'No' and 'Yes' (which is selected). A red arrow points from the 'Link Title Attribute' field to the 'Home' menu item in the screenshot below.

Main Menu Icons and Rich Text in combination **PRO**

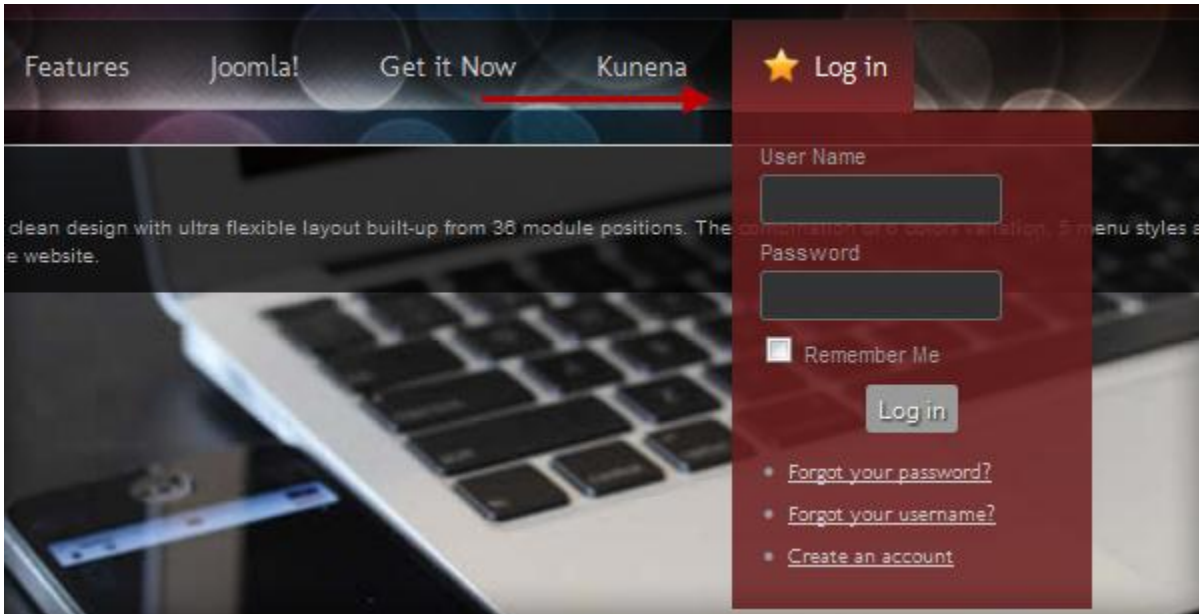

You can set up menu items to utilize both icons and rich text in combination.

Presenting Main Menu with modules **PRO**

You can present Main Menu with modules in in position **mainmenu**.

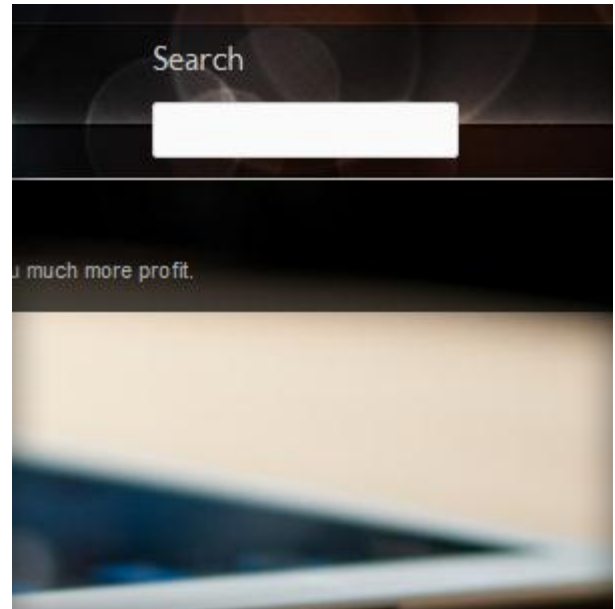

To do it, please set up parameters of the chosen module as following:

- Title: **Login** (or any other you like)
- Show title: **Show**
- Position: **mainmenu**
- Module Class Suffix:
 - **display-dropdown**: The module will be elegantly arranged in the submenu panel.
 - **display-inline**: The module will be located directly on the main menu bar.

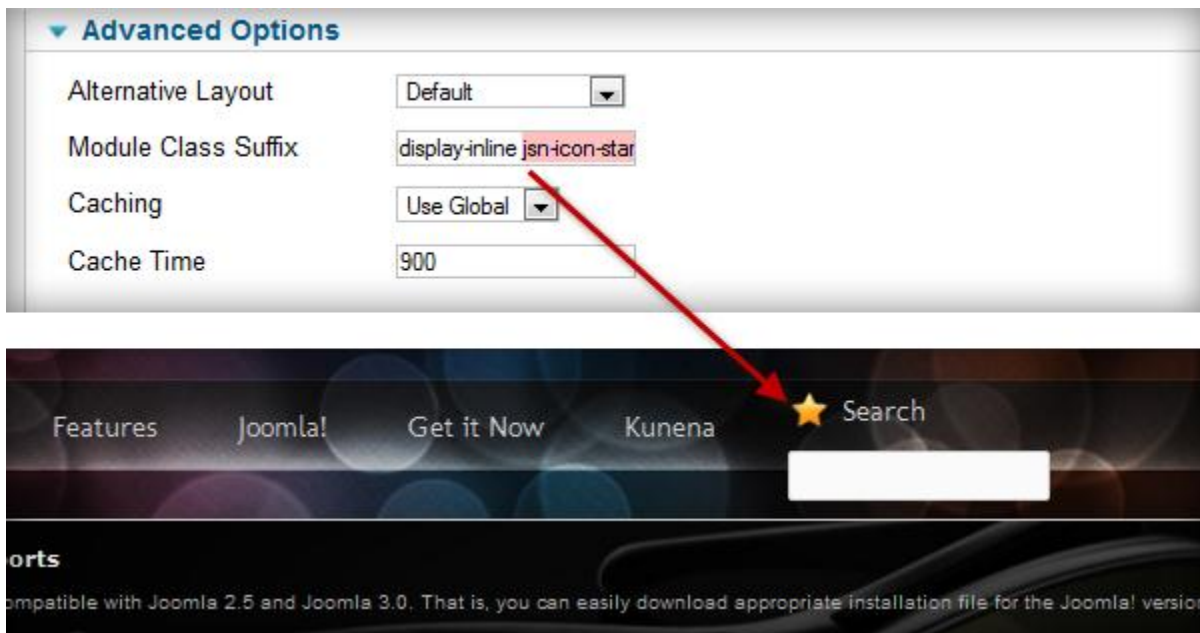

*Login module with **dropdown** type*

*Search module with **inline** type*

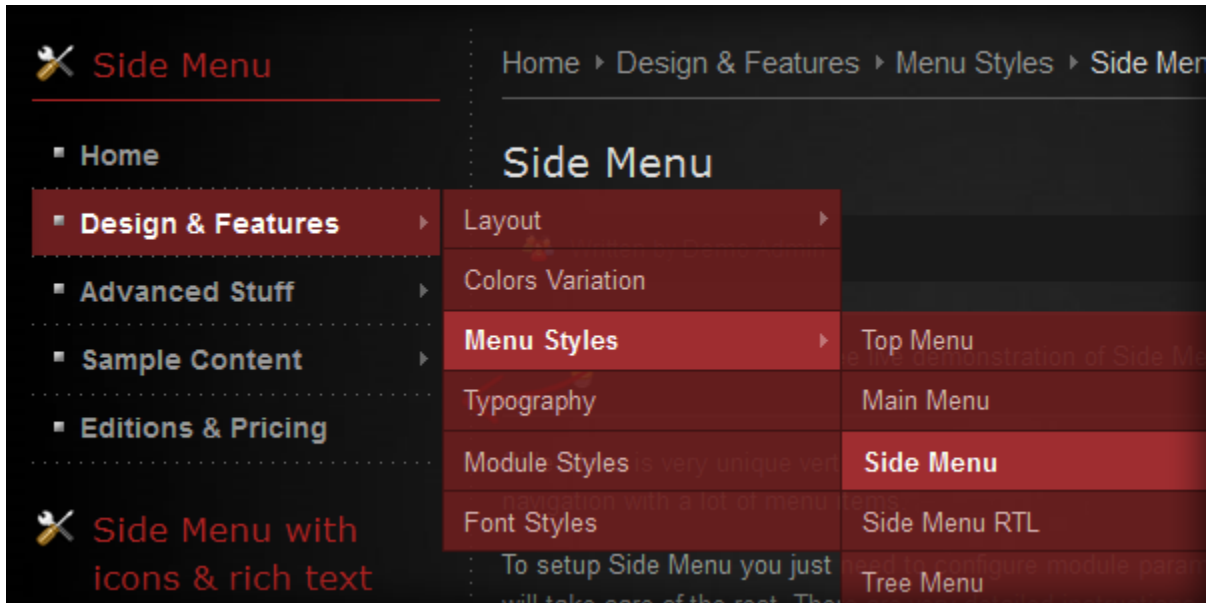

If you want to add an icon to this item, you add **jsn-icon-xxx** to the Module Class Suffix, with **xxx** is the icon name.

Attention!

You are not allowed to insert Rich text to this Main menu item with Module.

Side Menu **PRO**

Side Menu is a unique vertical menu with slide-out panels. This menu is extremely efficient when you have complex navigation with a lot of menu items.

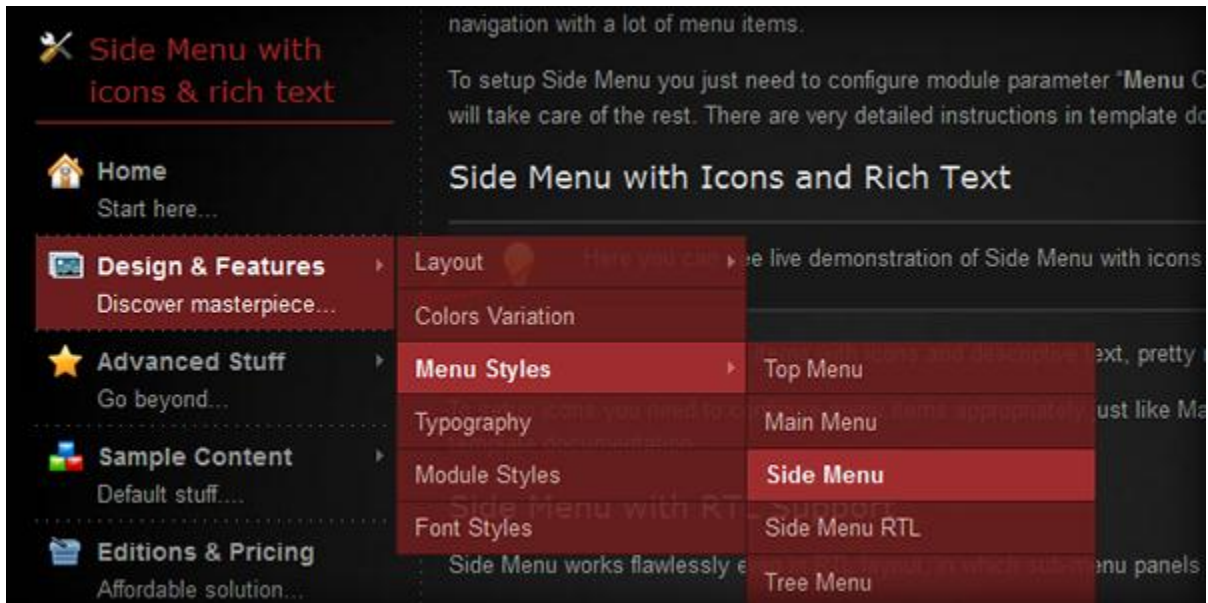

To set up Side Menu please select the menu module you want to use and set up parameters as following:

- Title: **Side Menu** (or any other you like)
- Show Title: **Show**
- Position: **left**
- Access: **Public**
- Language: **All**
- Select Menu: **Main Menu** (you might want to use another menu source here)
- Start Level: **1**
- End Level: **All**
- Show sub-menu items: **Yes**
- Menu Class Suffix: **menu-sidemenu menu-iconmenu menu-richmenu**

Attention!

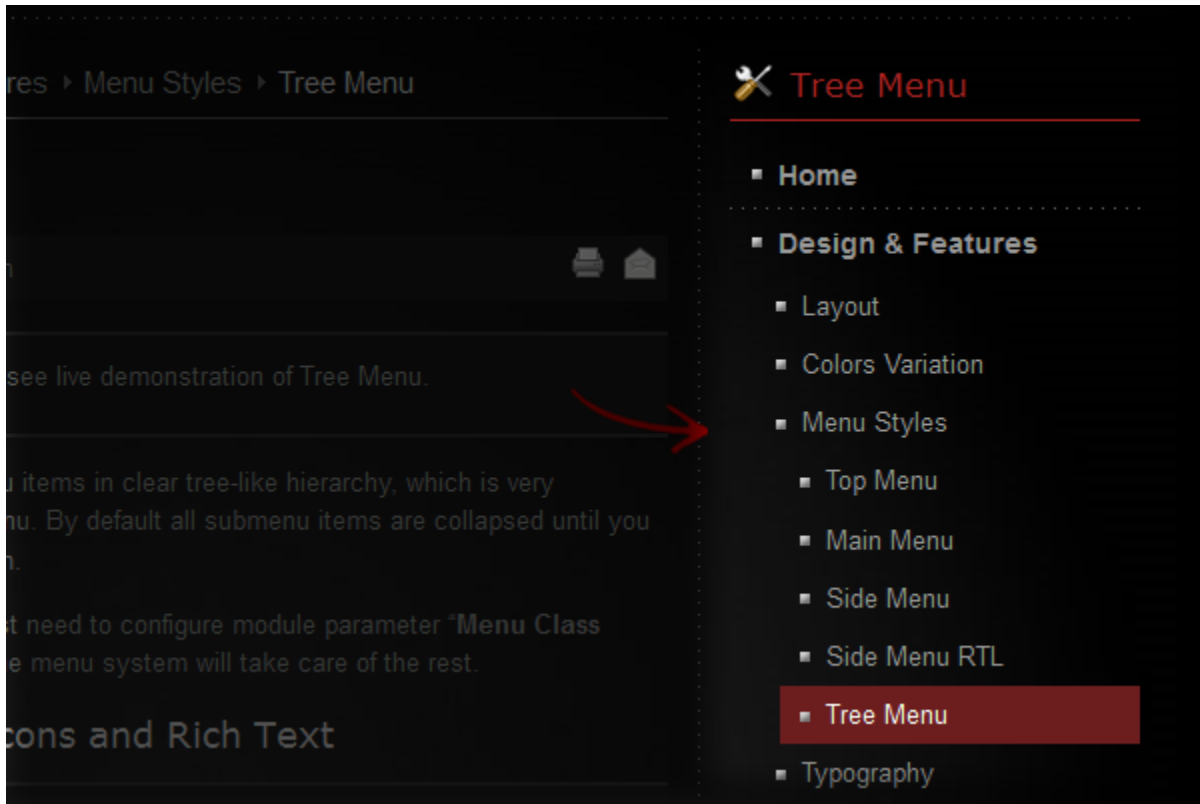

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

Side Menu Icons and Rich Text **PRO**

You can set up menu items to utilize both icons and rich text just as you can with Main Menu.

Tree Menu

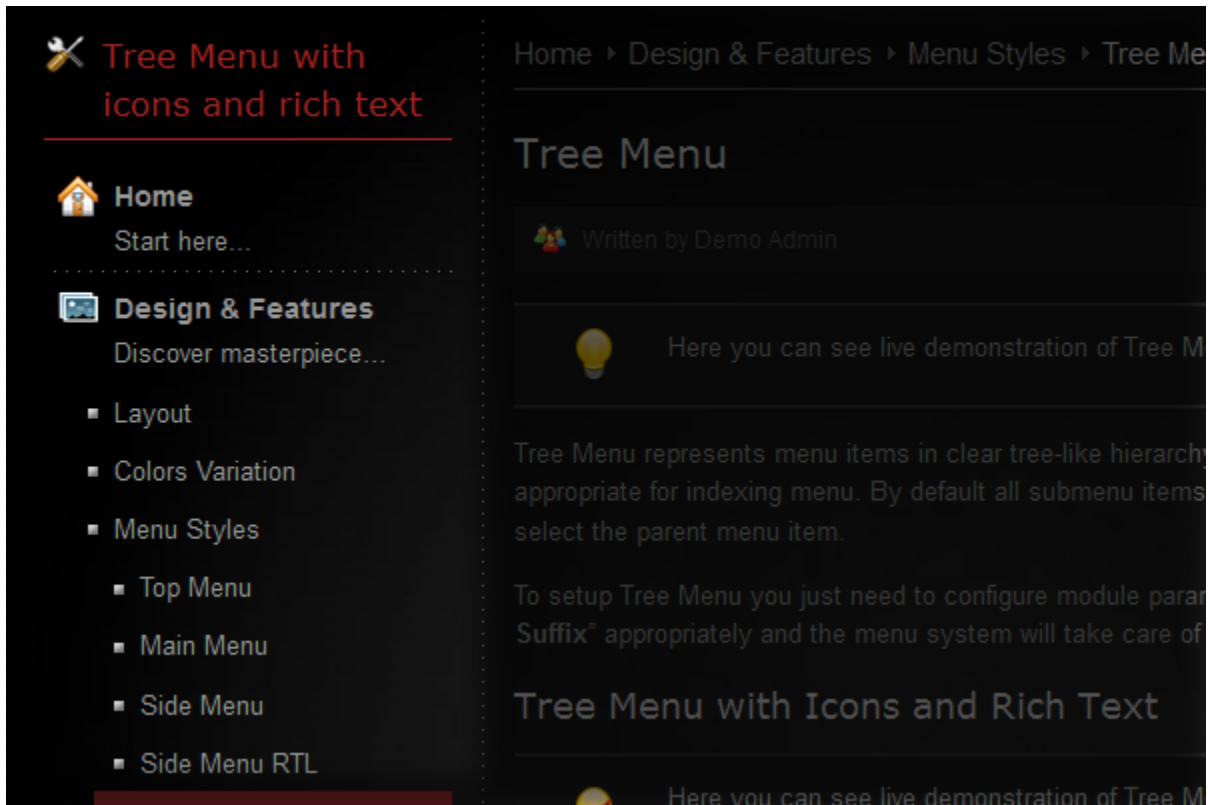

Tree Menu represents menu items in a clear tree-like hierarchy which is very appropriate for indexing menu. By default all sub-menu items are collapsed until you select the parent menu item.

To set up Tree Menu please select the menu module you want to use and set up parameters as following:

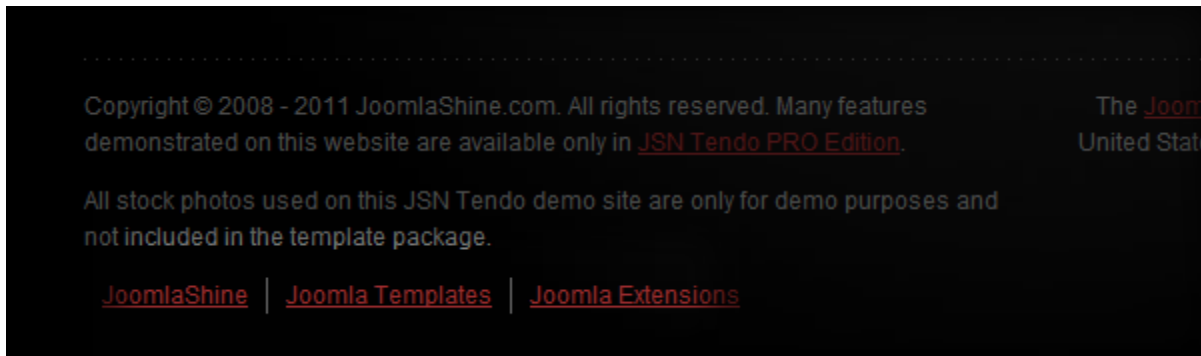

- Title: **Tree Menu** (or any other you like)
- Show Title: **Show**
- Position: **right**
- Access: **Public**
- Language: **All**
- Select Menu: **Main Menu** (you might want to use another menu source here)
- Start Level: **1**
- End Level: **All**
- Show sub-menu items: **No**
- Menu Class Suffix: **menu-treemenu menu-iconmenu menu-richmenu**

Tree Menu Icons and Rich Text **PRO**

You can set up menu items to utilize both icons and rich text just as you can with Main Menu.

Div Menu

Div Menu is a simple yet nice menu bar with items separated by barely visible dashes. This menu is very suitable for footer navigation presentation.

To set up Div Menu please select the menu module you want to use and set up parameters as following:

- Title: **Div Menu** (*or any other you like*)
- Show title: **Hide**
- Position: **footer**
- Access: **Public**
- Language: **All**
- Menu Name: **othermenu** (*you might want to use another menu source here*)
- Start Level: **1**
- End Level: **1**
- Show sub-menu items: **No**
- Menu Class Suffix: **menu-divmenu**

Attention!

There is a common misconception about **Menu Class Suffix** and **Module Class Suffix**. They are absolutely different parameters, so please pay attention to their settings.

Video tutorial

It guides you how to configure menus visually. Here is [video tutorial](#).

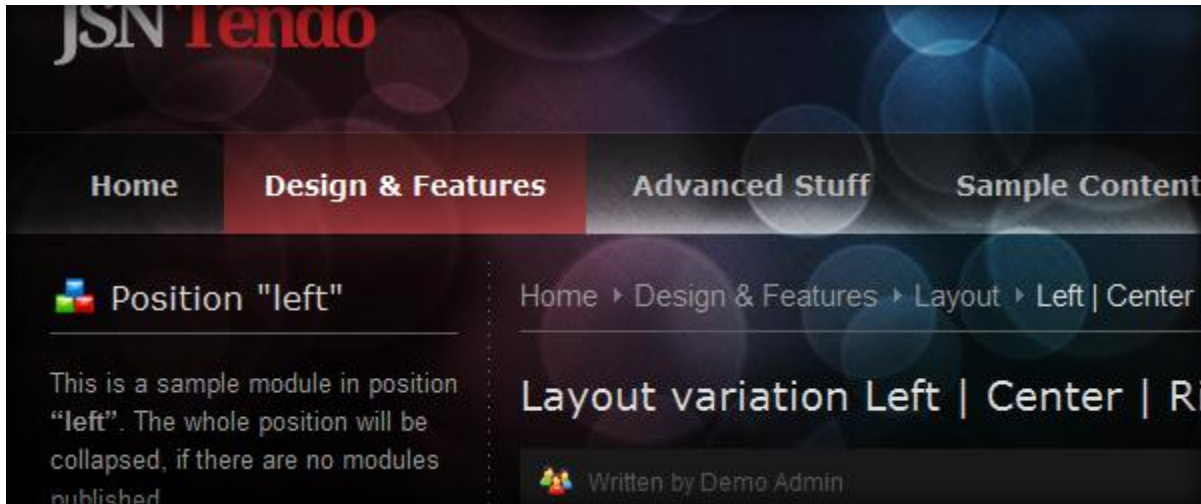

JSN Epic in the video is an example and these instructions can be applied to **JSN Tendo** template as well.

Font Styles

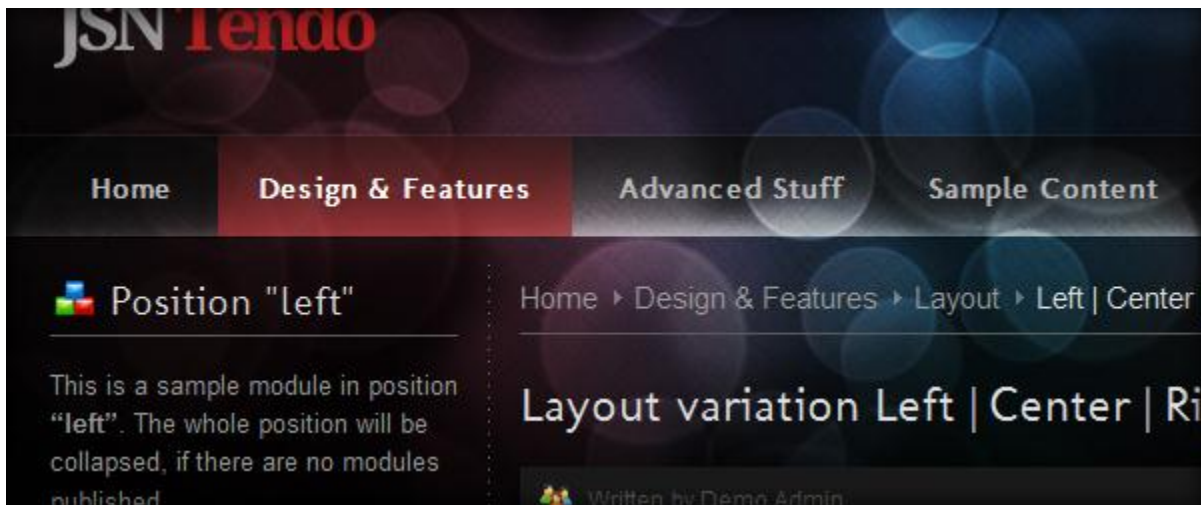

Font Face

JSN Tendo provides **three font face** options for major website types. Each font face option is actually a combination of two font types: one for content text, another for heading text and main navigation text. Additionally, for each font face, JSN Tendo provides special font powered by **Google Font Directory**.

Business / Corporation Website (default)

Normal font face

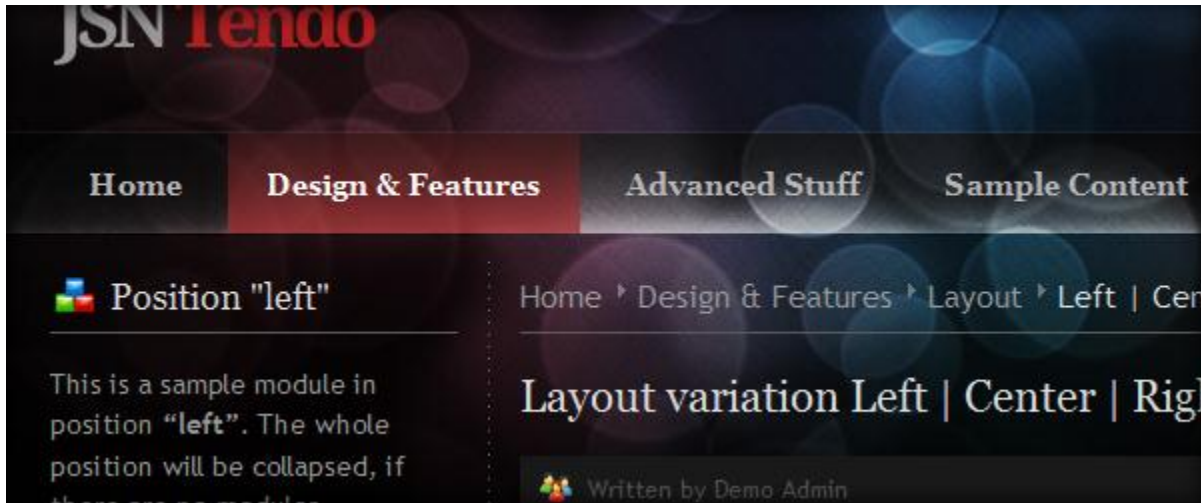

Special font face

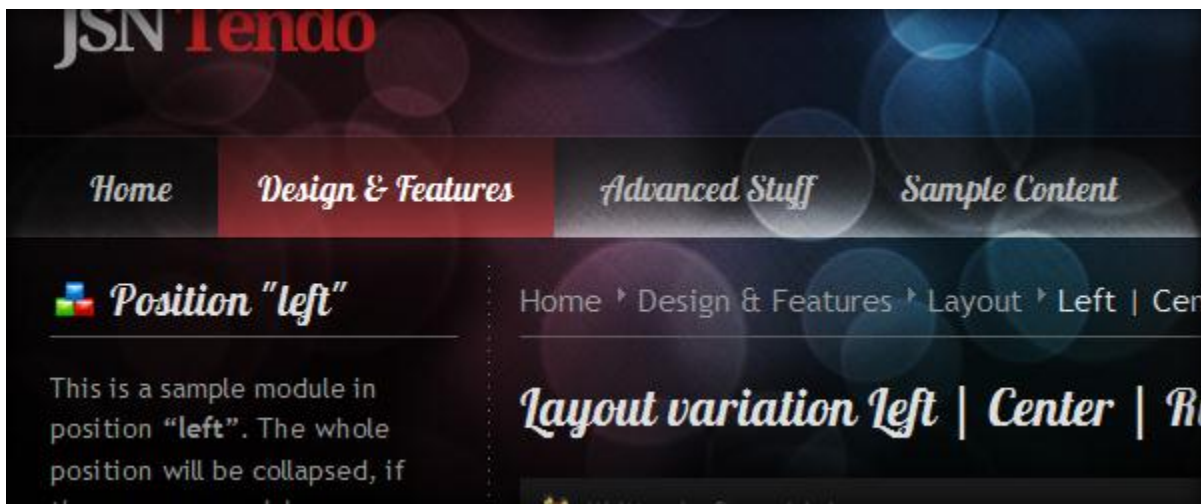

This compact neat text style is an excellent choice for business oriented websites as well as corporate websites. The combination of Verdana and Arial font type looks very natural and common for most of users since they are most popular font types used on the Internet. Below is the description of each font face:

	Normal font for PC	Normal font for Mac	Special font
Heading/menu text	Verdana	Geneva	Nobile
Content text	Arial	Helvetica	N/A

Personal / Blog Website

Normal font face

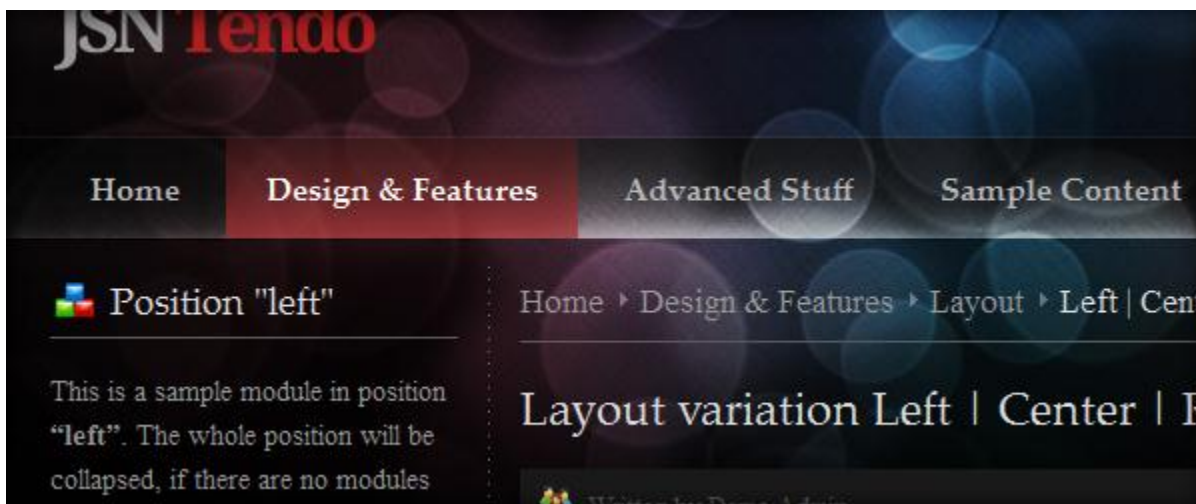

Special font face

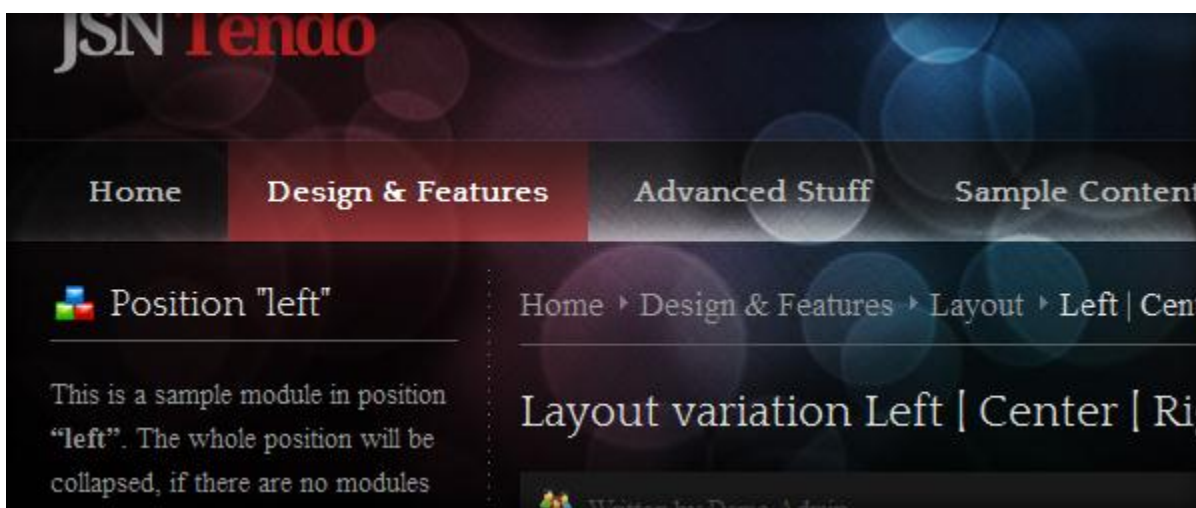

This text style is a little bigger than normal, which makes it a perfect choice for small websites like personal or blog websites. The combination of Georgia and Trebuchet MS makes content very easy to read and the look's impressive. Below is the description of each font face:

	Normal font for PC	Normal font for Mac	Special font
Heading/menu text	Georgia	serif	Lobster
Content text	Trebuchet MS	Helvetica	N/A

Online News / Magazines

Normal font face

Special font face

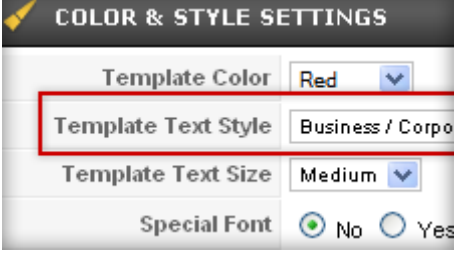

This text style utilizes another very popular font called Times New Roman. This font is widely used in the printing industry and in some of the extremely popular online news websites like [The New York Times](http://www.nytimes.com). If you want to run an online news / magazine website, it's worth trying this font combination. Below is the description of each font face:

	Normal font for PC	Normal font for Mac	Special font
Heading/menu text	Palatino Linotype	Palatino	Droid Serif
Content text	Times New Romam	Times	N/A

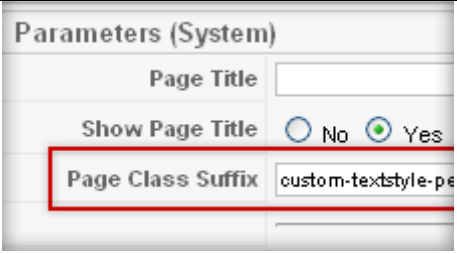

Text style configuration

You can configure template text style by in the two following ways:

Configuration by template parameter (lowest priority)

	<p>Template text style can be set by template parameter Template Text Style. This is the default setting and has the lowest priority.</p>
----------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------

Configuration by "Page Class" (higher priority)

	<p>Template text style can be set by Page Class of a menu item with syntax custom-textstyle-xxx, where xxx is the style you want to have.</p> <p>There are the following possible values: business, personal and news.</p> <p>For example:</p> <ul style="list-style-type: none">• custom-textstyle-personal <p>This setting will override the default settings by template parameter <i>Template Text Style</i>.</p>
-----------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Font Size **PRO**

JSN Tendo provides **three text size** options for major website audience types.

Small font size

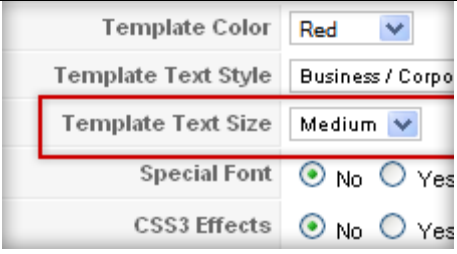

Medium font size

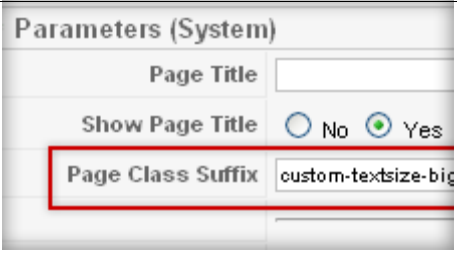

Large font size

You can configure template text size by three following ways:

Configuration by template parameter (lowest priority)

	<p>Template text size can be set by template parameter Template Text Size.</p> <p>This is the default setting and has the lowest priority.</p>
----------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------

Configuration by "Page Class" (higher priority)

	<p>Template text size can be set by Page Class of a menu item with syntax custom-textsize-xxx, where xxx is the size you want to have.</p> <p>There are the following possible values: small, medium and big.</p> <p>For example:</p> <ul style="list-style-type: none">• custom-textsize- big <p>This setting will override the default settings by template parameter <i>Template Text Size</i>.</p>
----------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Configuration by Site tools panel (top priority)

	<p>Template text size can be selected by Text Size Selector from Site tools.</p> <p>This setting is considered as the visitor's preference and has top priority. It will overwrite both <i>Page Class</i> and default settings of parameter <i>Template Text Size</i>.</p>
------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

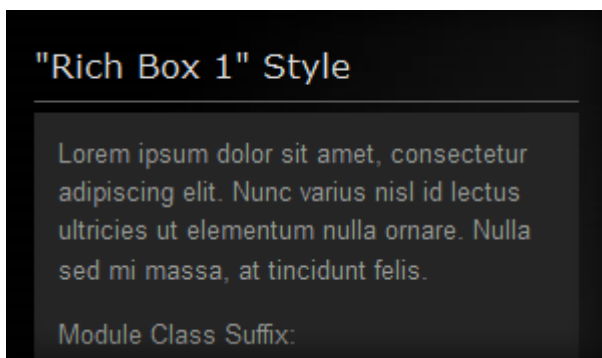

Module Styles

JSN Tendo provides **six box designs** for module background styling which can be combined with **Unicons** for module title styling.

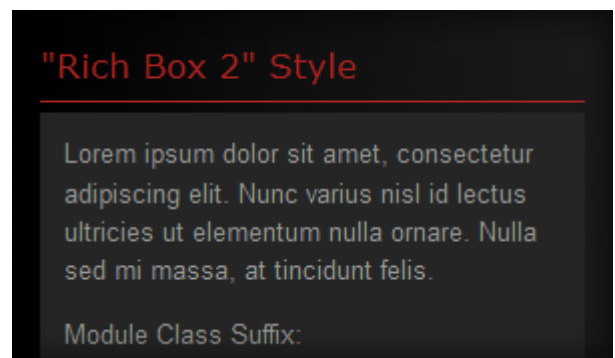

Module styles are configured by module's parameter **Module Class Suffix**. All available values are described below and need to be applied **without double quotes**.

Module Box Designs

Box designs to be applied to modules.

“richbox-1”

“richbox-2”

Box designs available in PRO edition only **PRO**

"Light Box 1" Style

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc varius nisl id lectus ultricies ut elementum nulla ornare. Nulla sed mi massa, at tincidunt felis.

Module Class Suffix:

"lightbox-1"

"Light Box 2" Style

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc varius nisl id lectus ultricies ut elementum nulla ornare. Nulla sed mi massa, at tincidunt felis.

Module Class Suffix:

"lightbox-2"

"Solid Box 1" Style

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc varius nisl id lectus ultricies ut elementum nulla ornare. Nulla sed mi massa, at tincidunt felis.

Module Class Suffix:

"solid-1"

"Solid Box 2" Style

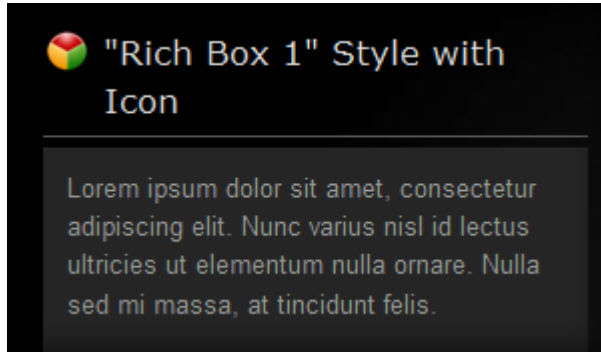

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nunc varius nisl id lectus ultricies ut elementum nulla ornare. Nulla sed mi massa, at tincidunt felis.

Module Class Suffix:

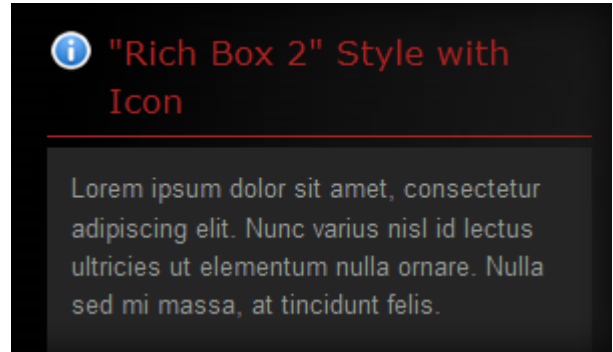

"solid-2"

Module Icon Designs **PRO**

You can attach any of the **UniIcons** to the module's title. To set up icons, you need to add the string **jsn-icon-xxx** to the module class suffix, where **xxx** is the icon name.

“richbox-1 jsn-icon-statistics”

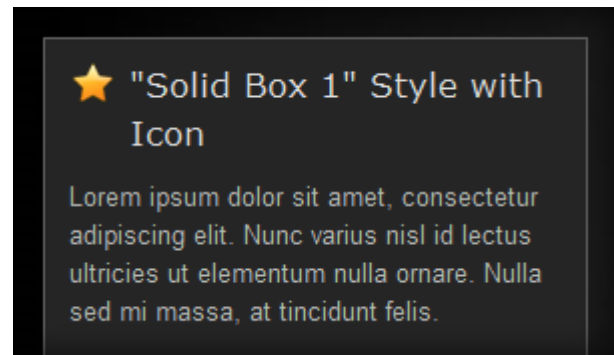

“richbox-2 jsn-icon-info”

All icon designs can be used in **combination with a module box design** like examples below:

“lightbox-2 jsn-icon-folder”

“solid-1 jsn-icon-star”

For more information about available icons and their names, please read section **UniIcons** of this document.

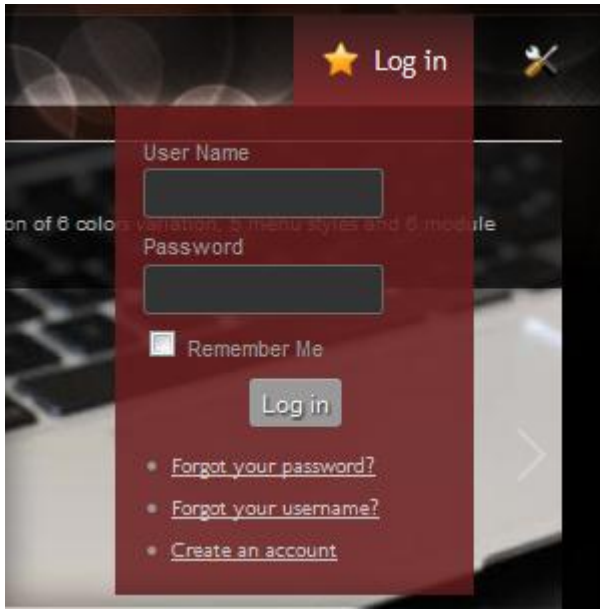

Presenting Modules in Toolbar position

You can present Modules in Toolbar position.

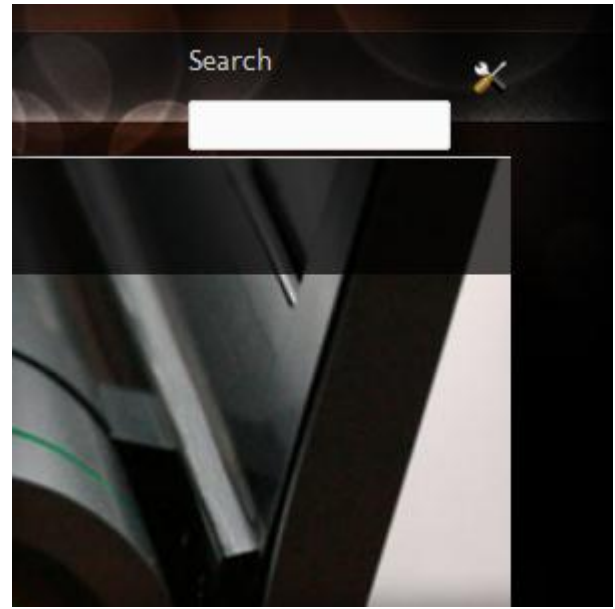

To do it, please set up parameters of the chosen module as following:

- Title: **Login** (or any other you like)
- Show title: **Show**
- Position: **toolbar**
- Module Class Suffix:
 - **display-dropdown**: The module will be elegantly arranged in the submenu panel.
 - **display-inline**: The module will be located directly on the main menu bar.

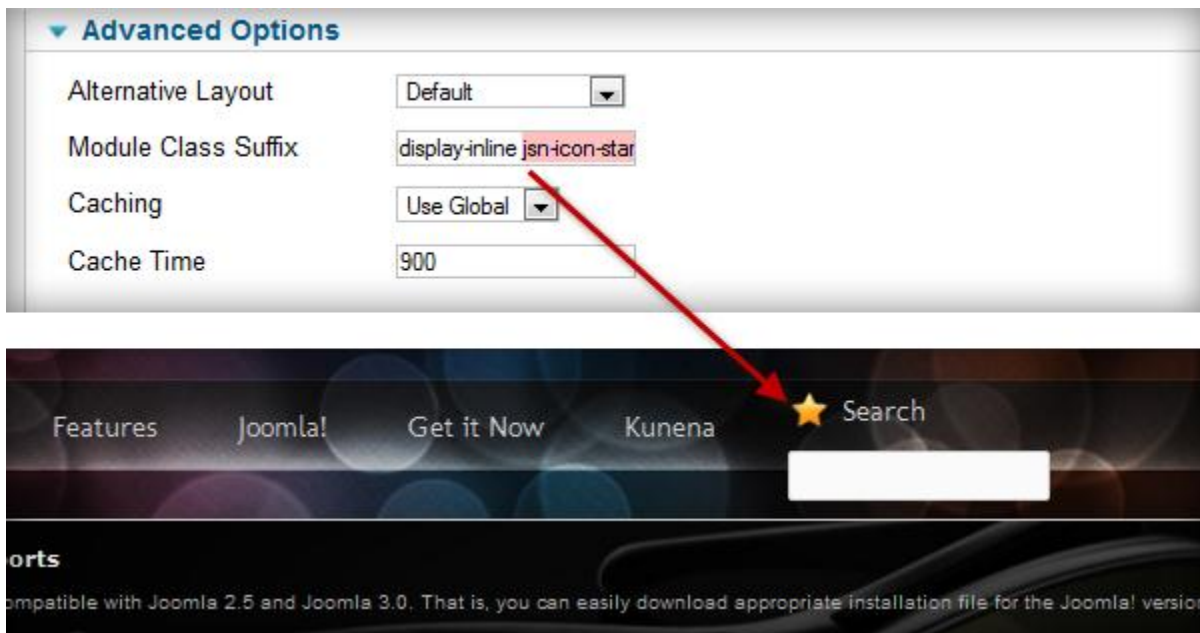

*Login module with **dropdown** type*

*Search module with **inline** type*

If you want to add an icon to this item, you add **jsn-icon-xxx** to the Module Class Suffix, with **xxx** is the icon name.

Typography

JSN Tendo was created with **a strong focus on typography** and we believe it contains the most comprehensive content presentation capability. Headings, text, links, tables, images, everything was designed with high level of refinement. Let's take a look.

Content columns **PRO**

It's a pretty common situation when you need to arrange your content in multiple columns. JSN Tendo offers you very a convenient and accessible method to create **multiple column content**. This is a real step forward removing table tags from your content and leaving them only for showing tabular data.

You can arrange your content in **as many columns as you like**. JSN Tendo will detect the number of columns you have and automatically arrange them. The only thing you need to do is to set class **grid-layout** to parent DIV tag.

Below are screenshots of how this feature looks and example how to use it.

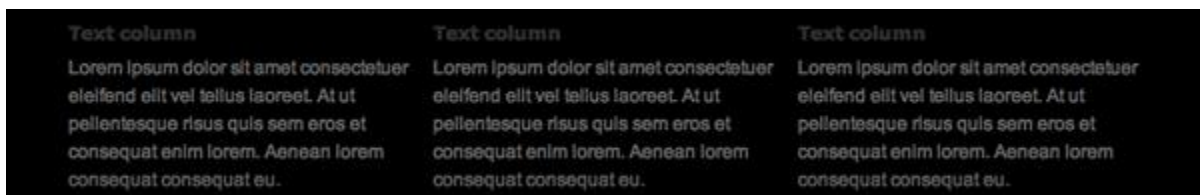

Content arranged in two columns

Usage:

```
<div class="grid-layout">  
  <div>Text in column 1</div>  
  <div>Text in column 2</div>  
</div>
```

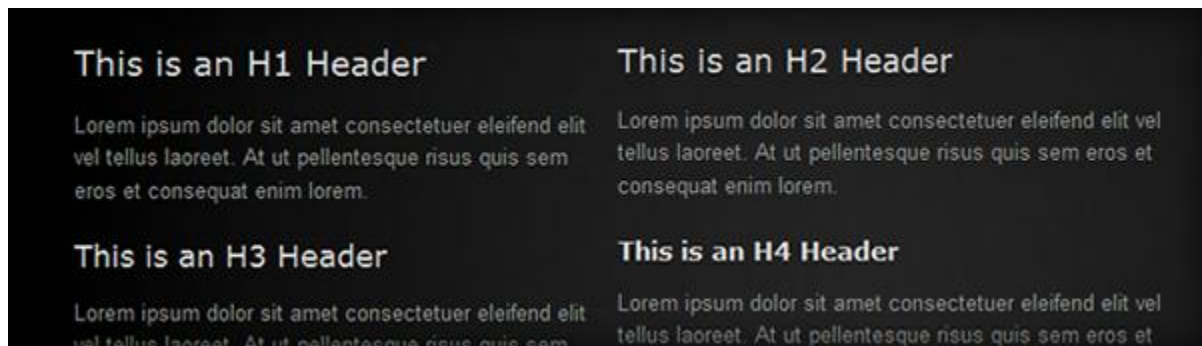

Content arranged in three columns

Usage:

```
<div class="grid-layout">  
  <div>Text in column 1</div>  
  <div>Text in column 2</div>  
  <div>Text in column 3</div>  
</div>
```

Heading styles

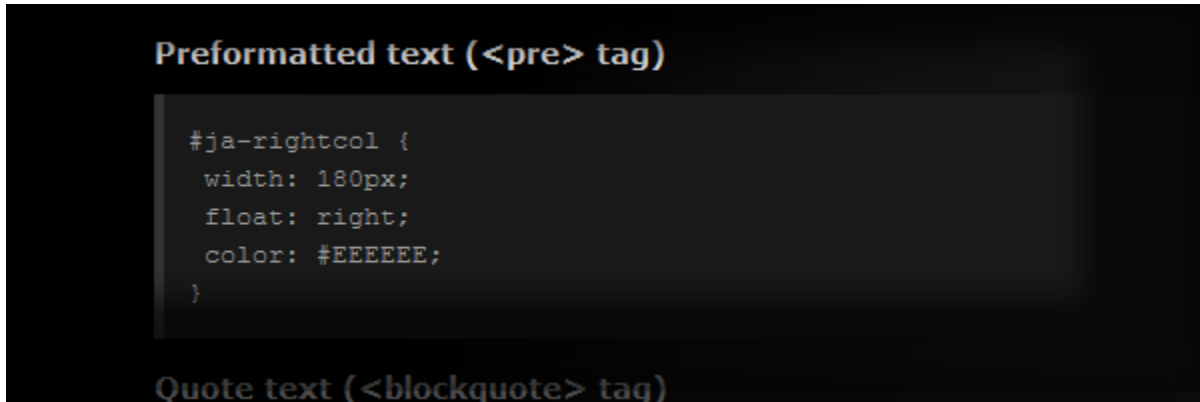

As we all know, headings are “title” of undergoing text blocks, so it must have a distinguish look. JSN Tendo provides styling for five main headings. To apply them you just need to wrap your heading text in regular heading tags like **<h1>...</h1>**, **<h2>...</h2>**, **<h3>...</h3>**, etc.

Text styles

JSN Tendo provides **12 text styles** for making your content easier to scan and read. Below are screenshots of text styles and usage examples.

Preformatted text

You can use this style to present text with preserved spaces like text block of CSS code or other programming language.

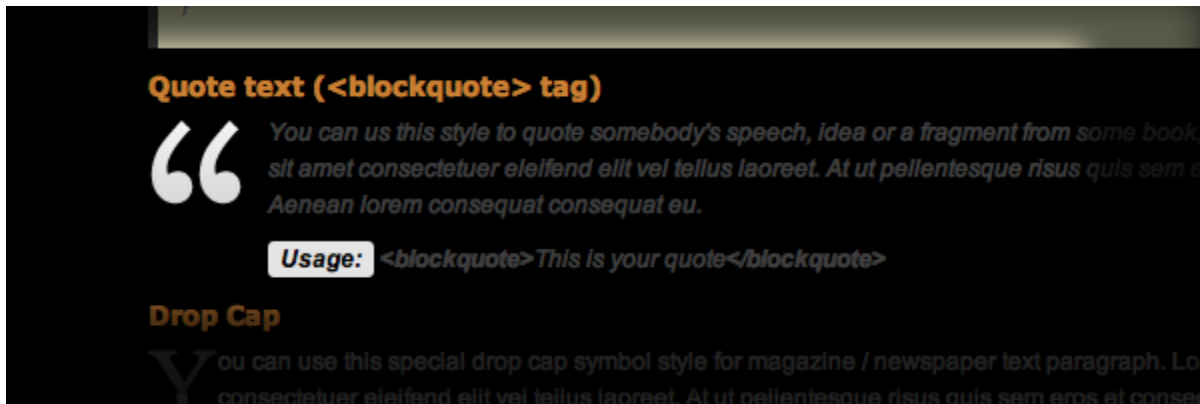

Usage:

<pre>Your preformatted text**</pre>**

Quote text

You can use this style to quote somebody's speech, idea or a fragment from books, articles, etc.

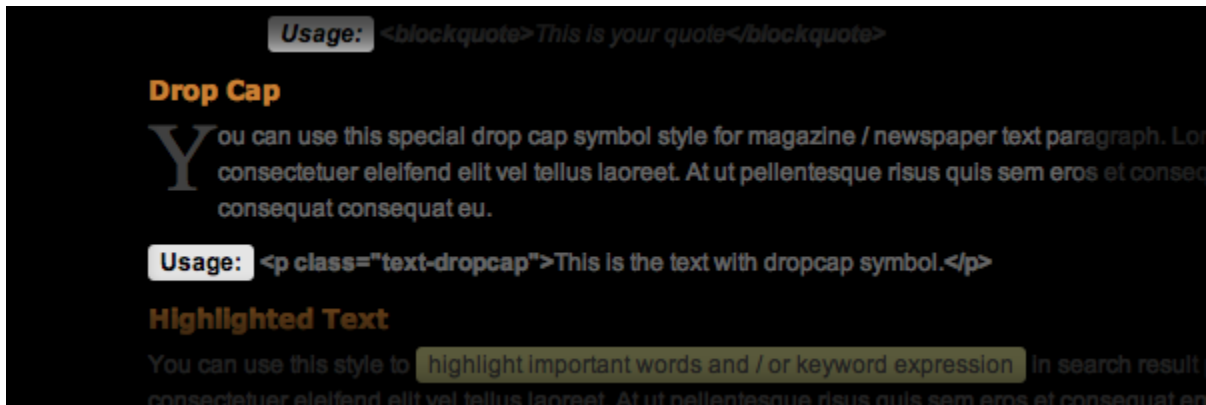

Usage:

<blockquote>Your quote text**</blockquote>**

Drop cap symbol

You can use this special drop cap symbol style for magazine / newspaper text paragraph.

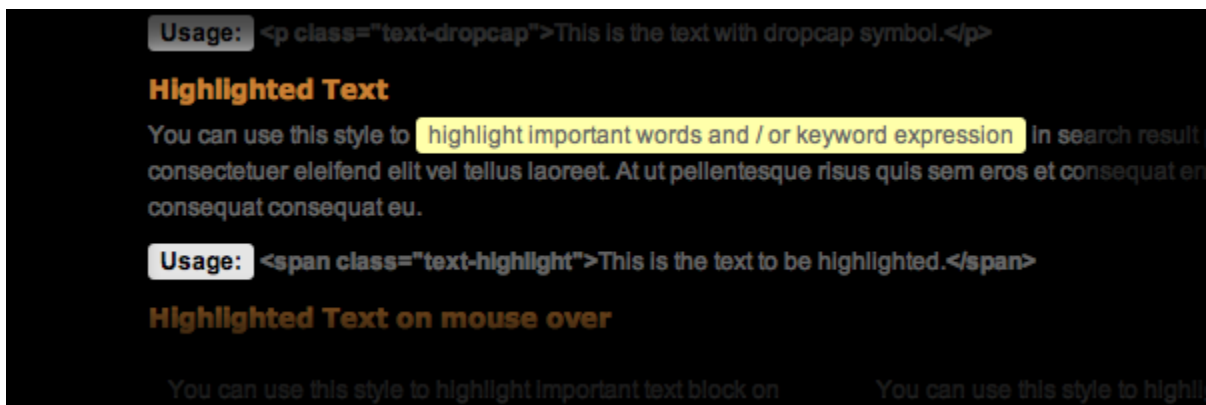

Usage:

`<div class="text-dropcap"><p>Your magazine text paragraph.</p></div>`

Highlighted text

You can use this style to highlight important words and / or keyword expression in search result page.

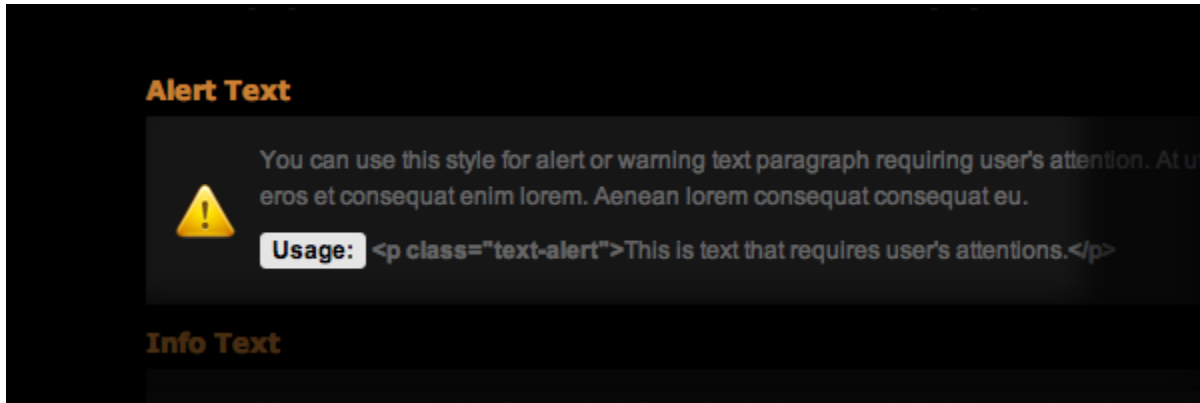

Usage:

`Text to be highlighted.`

Alert text **PRO**

You can use this style for alert or warning text paragraphs which require user's attention.

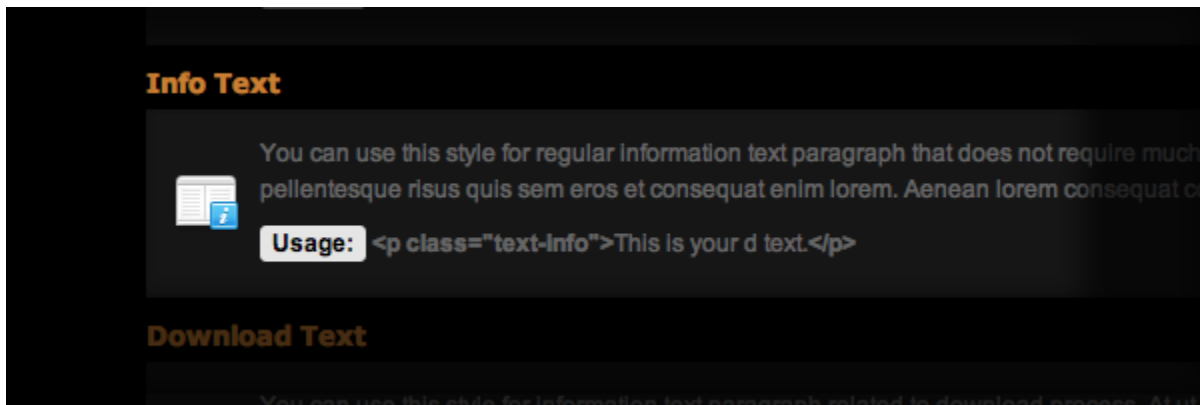

Usage:

`<p class="text-alert">Your alert text that requires user's attentions.</p>.`

`<div class="text-alert">Your alert text that requires user's attentions.</div>.`

Info text **PRO**

You can use this style for regular information text paragraphs that do not require much user's attention.

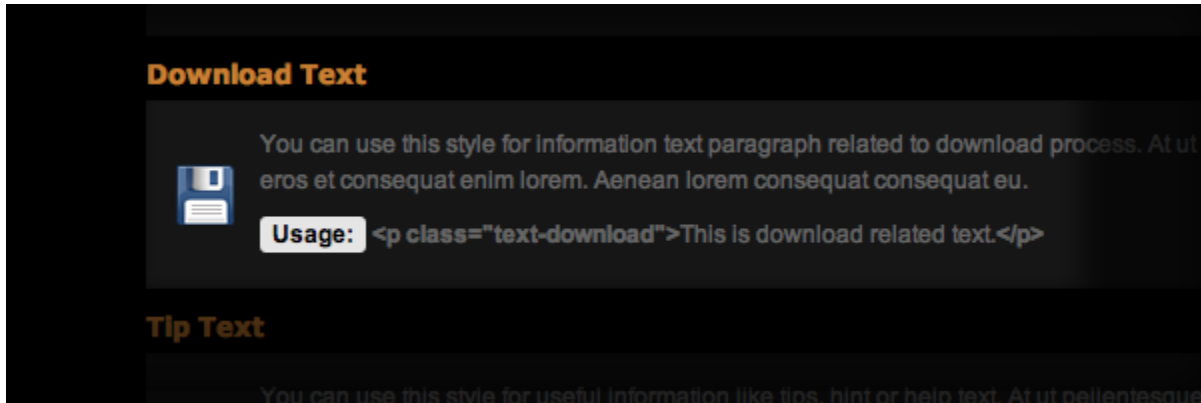

Usage:

`<p class="text-info">Your information text.</p>.`

`<div class="text-info">Your information text.</div>.`

Download text **PRO**

You can use this style for information text paragraph related to the download process.

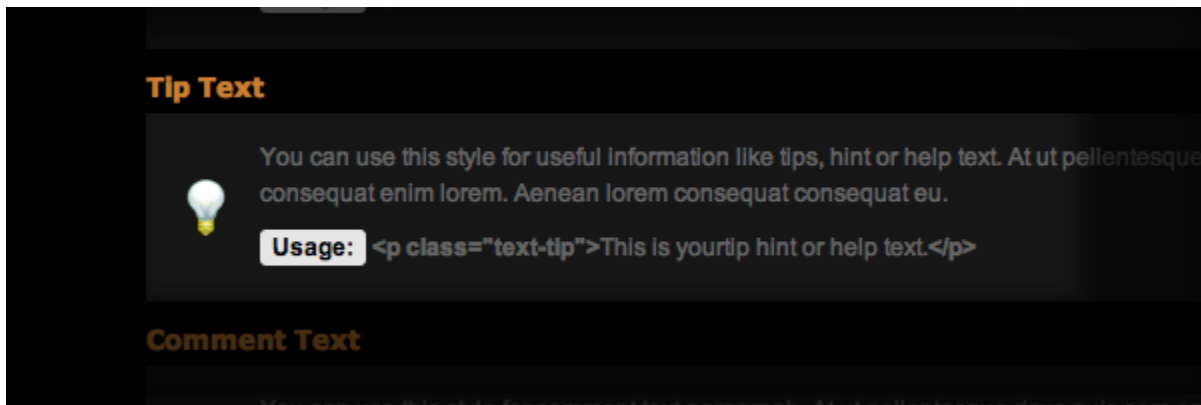

Usage:

`<p class="text-download">Your download text.</p>`.

`<div class="text-download">Your download text.</div>`.

Tip text **PRO**

You can use this style for useful information like tips, hints or help text.

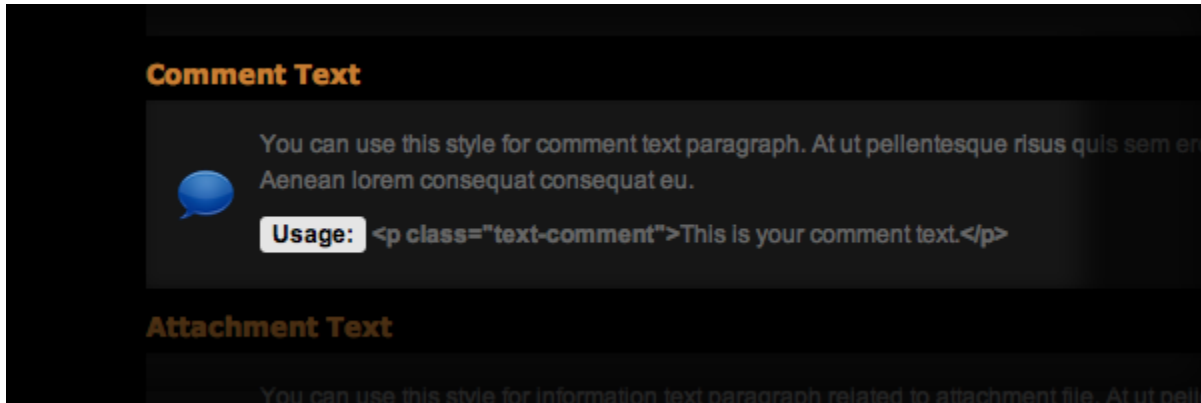

Usage:

`<p class="text-tip">Your tip, hint or help text.</p>`

`<div class="text-tip">Your tip, hint or help text.</div>`

Comment text **PRO**

You can use this style for comment text paragraphs.

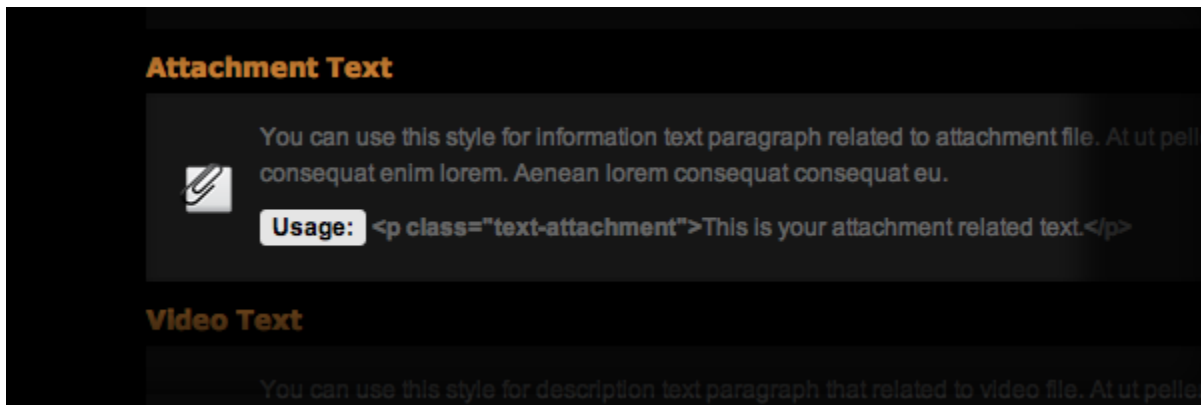

Usage:

<p class="text-comment">Your comment text.**</p>**

<div class="text-comment">Your comment text.**</div>**

Attachment text **PRO**

You can use this style for information text paragraphs related to attachment file.

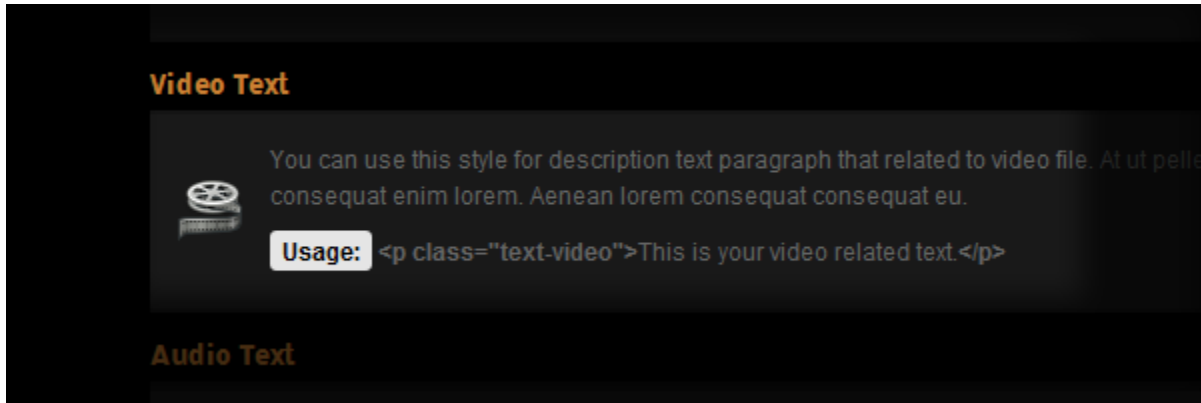

Usage:

<p class="text-attachment">Your attachment text.**</p>**.

Video text **PRO**

You can use this style for description text paragraphs that related to video file.

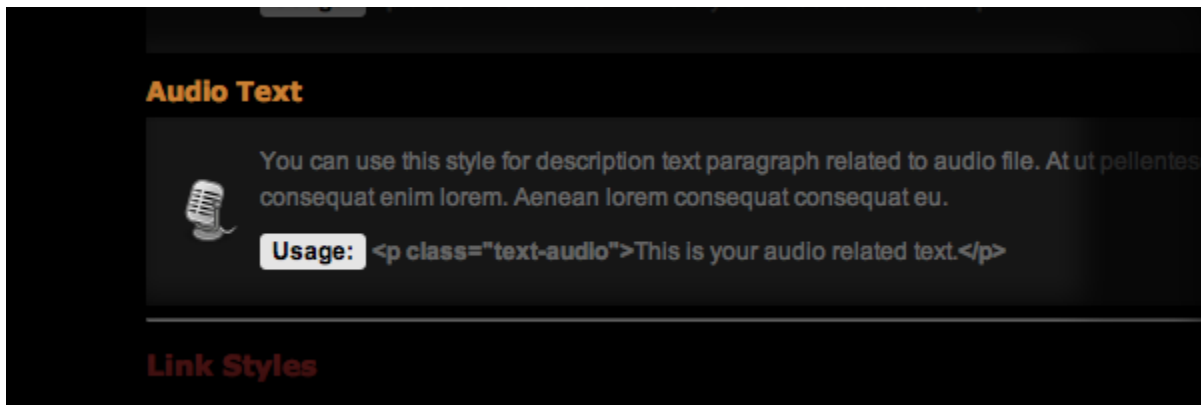

Usage:

`<p class="text-video">Your video text.</p>`

`<div class="text-video">Your video text.</div>`.

Audio text **PRO**

You can use this style for description text paragraph related to audio file.

Usage:

`<p class="text-audio">Your attachment text.</p>`

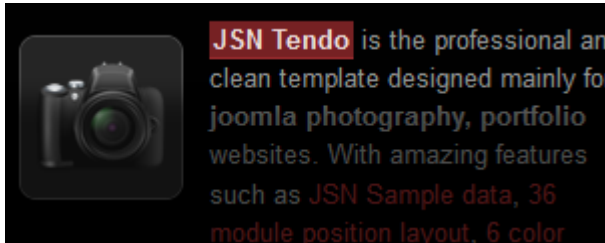

`<div class="text-audio">Your attachment text.</div>`.

Link styles **PRO**

Action link styles

With action link styles, website hyperlink's color will be changed when you hover mouse over website hyperlink.

Action link styles

Usage:

```
<a class="link-action" href="url">This is link text.</a>
```

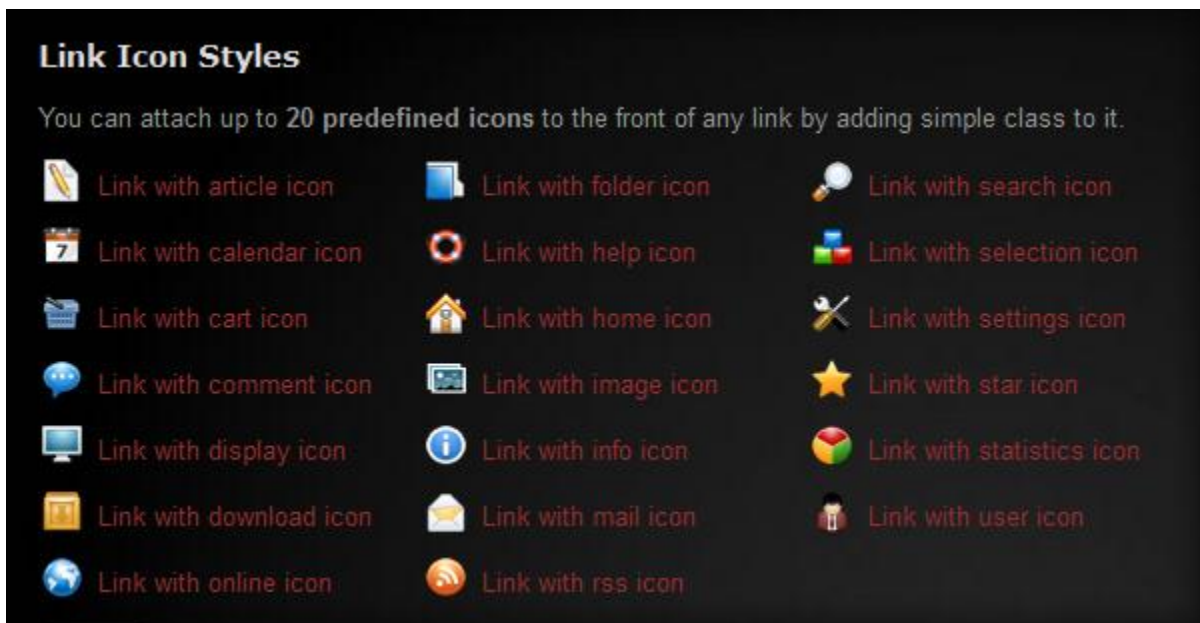

Where **url** is the website hyperlink.

Example:

```
<a class="link-action" href="http://www.joomlashine.com">Joomlashine.</a>
```

Icon link styles

You can attach any of **UniIcons** to the front of any link by adding simple class to it.

Usage:

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

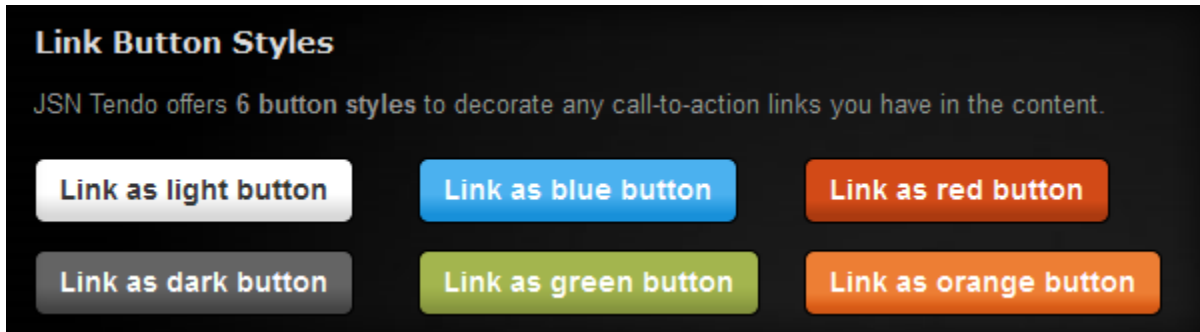

``This is link text.``, where **xxx** is the name of icon to be applied.

Example:

``This is link to download something.``

Button link styles

JSN Tendo offers **six button styles** to decorate any call-to-action links you have in the content.

Usage:

``This is link text.``

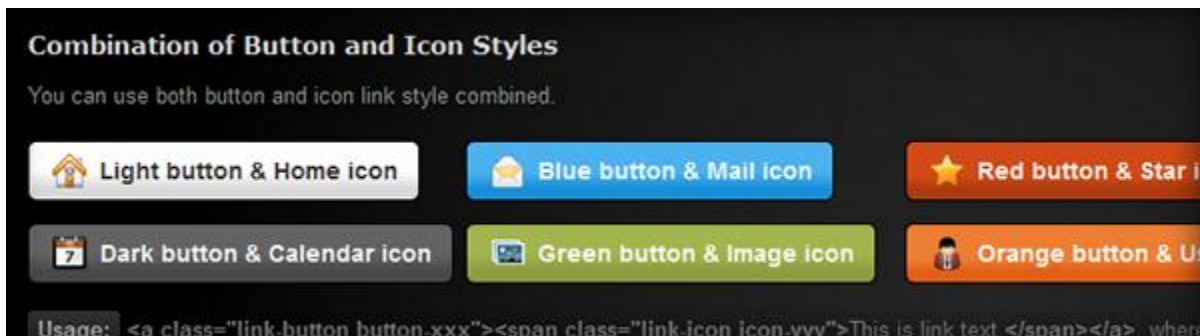

where **xxx** is the button color name selected from: **light**, **dark**, **green**, **orange**, **blue** and **red**.

Example:

``See plans & pricing.``

Button and Icon link styles combined

You can use both button and icon link style combined.

Usage:

``This is link text.``

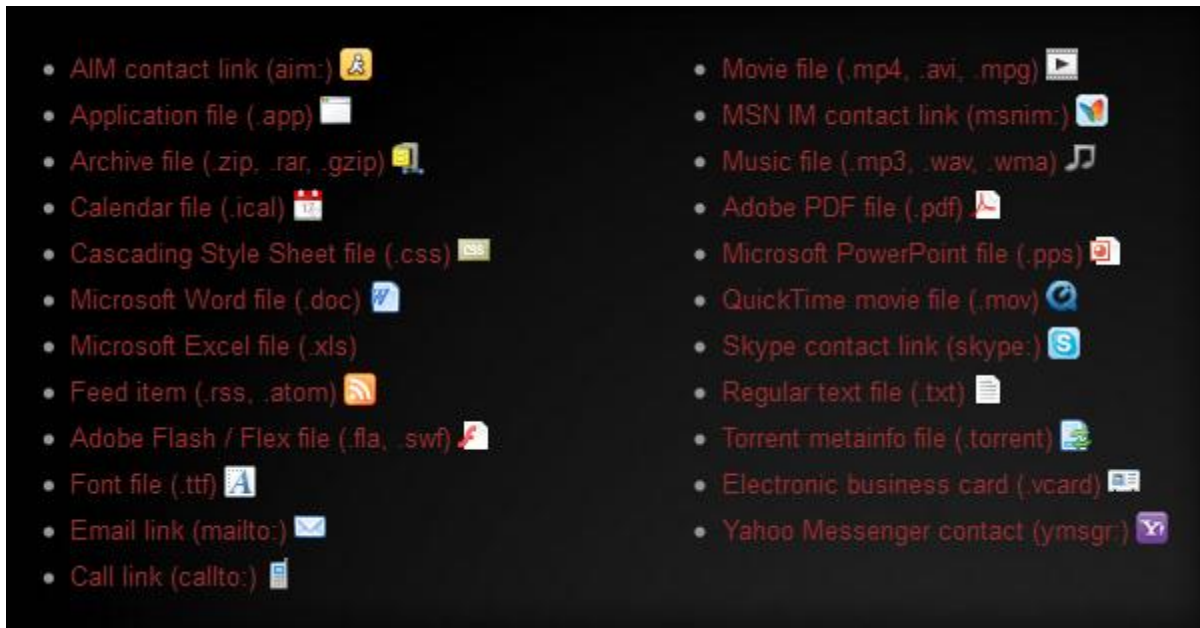

where **xxx** and **yyy** are button color and icon names respectively.

Example:

Add to cart.

Extension link styles

JSN Tendo is able to attach not only descriptive icon to the front of link as described in the above section, but also **24 extension icons** to the end of the link.

There are two ways of utilization extension icons.

Automatic assignment

JSN Tendo is able to detect links to various popular file extensions and assign icons accordingly. This feature utilizes the modern CSS2 specification allowing and you to have links with meaningful icons assigned without any modification in XHTML code. Moreover, it can detect the protocol type to assign icons to links to instant messengers, email, etc.

Manual assignment

As stated before, most browsers' icons will be automatically assigned thanks to the modern CSS2 specification. Unfortunately IE6 does not support this specification and you have manually set an appropriate class for links. Also, this can help if, for some reason, you turned off the auto icon link template parameter but still want to manually apply icons to links.

Usage: ****This is link text.****, where **xxx** is the icon name described below.

 - "aim"

 - "excel"

 - "movie"

 - "skype"

 - "application"

 - "feed"

 - "msn"

 - "text"

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

JSN Tendo utilizes the CSS sprite technique to reduce the number of HTTP requests to server in order to get icons. Technically, all icons are merged in one single image file and visitors will need to make **one single request/download** to get that file with all icons. If you have extra time, please read [more about CSS sprites](#).

Table styles **PRO**

Tabular data is a very common type of information to be presented on the web. By default, tables look ugly and not much readable. With JSN Tendo you have **three table styles** to present virtually any kind of tabular data you have.

Color Header table style

Plain Rows table style

Table header	Column header 1	Column header 2	Column header 3
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Table footer	Footer data		

Usage:

`<table class="table-style style-colorheader">...</table>`

Color Stripes table style

Color Stripes table style

Table header	Column header 1	Column header 2	Column header 3
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Table footer	Footer data		

Usage:

`<table class="table-style style-colorstripes">...</table>`

Grey Stripes table style

Grey Stripes table style

Table header	Column header 1	Column header 2	Column header 3
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Row header 1	Lorem ipsum	Dolor sit amet	Lorem ipsum
Table footer	Footer data		

Usage:

`<table class="table-style style-greystripes">...</table>`

Attention!

In order to get table styles shown correctly, you need to create solid XHTML code as show bellow.

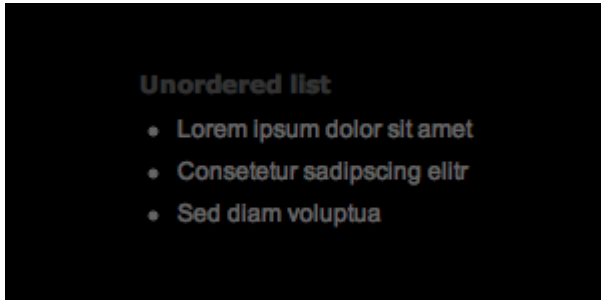

```
<table width="100%" class="table-style style-colorheader">
  <thead>
    <tr>
      <th>Table header</th>
      <th>Column header 1</th>
      <th class="highlight">Column header 2</th>
      <th>Column header 3</th>
    </tr>
  </thead>
  <tfoot>
    <tr>
      <th>Table footer</th>
      <td colspan="3">Footer data</td>
    </tr>
  </tfoot>
  <tbody>
    <tr class="odd">
      <th>Row header 1</th>
      <td>Lorem ipsum</td>
      <td class="highlight">Dolor sit amet</td>
      <td>Lorem ipsum</td>
    </tr>
  </tbody>
</table>
```

List styles

List is the crucial element in every content, not only online websites. List can really help readers to scan the content and catch important pieces by just a glance.

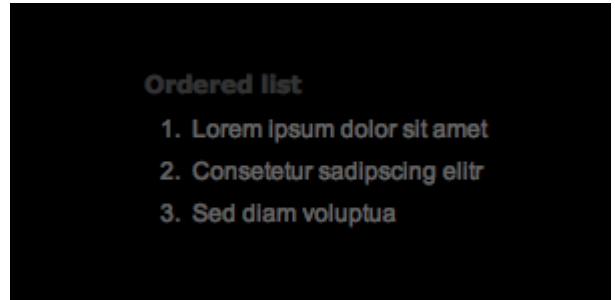

Standard list styles

Unordered list

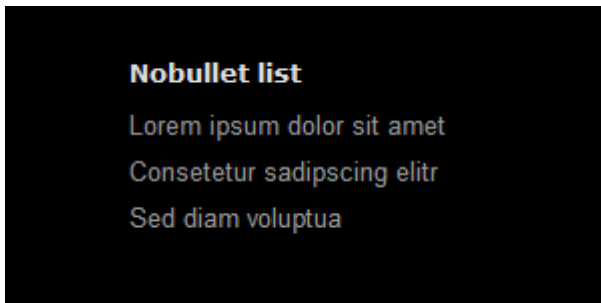

Usage: `...`

Ordered list

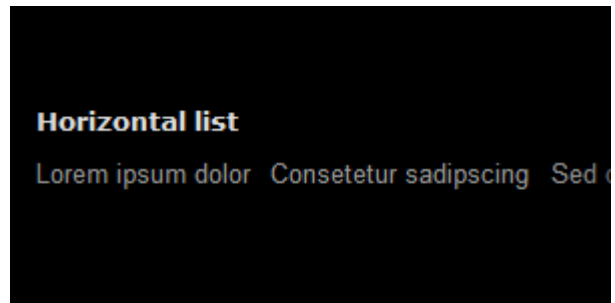

Usage: `...`

Nobullet list

Usage: `<ul class="list-nobullet">...`

Horizontal list

Usage: `<ul class="list-horizontal">...`

Arrow list styles

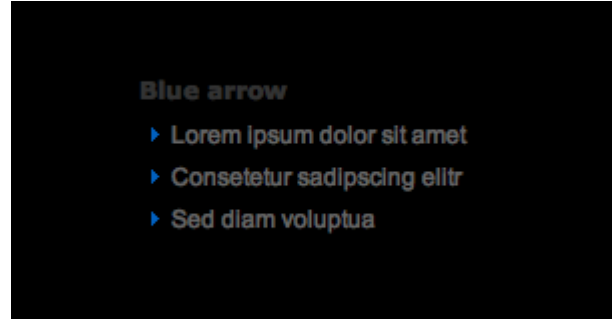

Red arrow

Usage:

```
<ul class="list-arrow arrow-red"><li>...</li></ul>
```

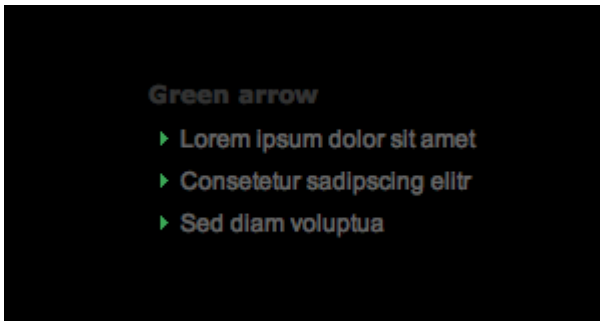

Blue arrow

Usage:

```
<ul class="list-arrow arrow-blue"><li>...</li></ul>
```

Green arrow

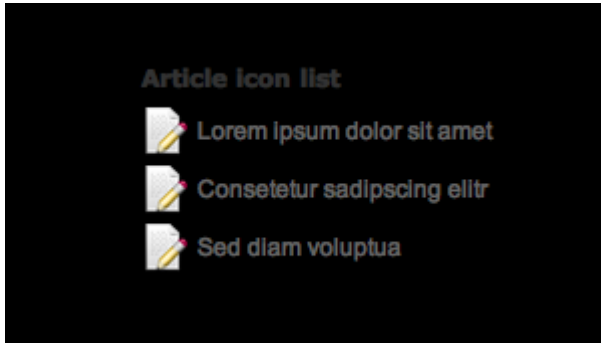

Usage:

```
<ul class="list-arrow arrow-green"><li>...</li></ul>
```

Icon list styles **PRO**

You can attach any of **UniIcons** to items in the list. To set up icons, you need to add string **jsn-icon-xxx** to **** class, where **xxx** is the icon name.

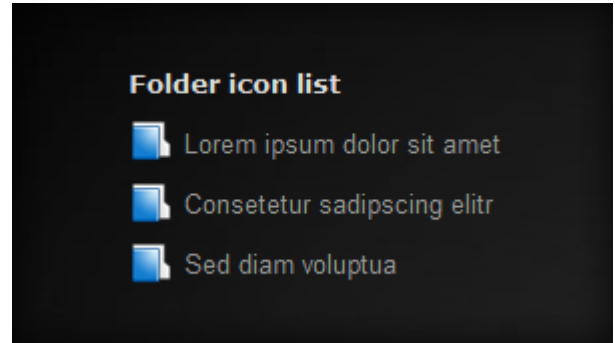

Article icon list

Usage:

```
<ul class="list-icon jsn-icon-  
article"><li>...</li></ul>
```

Folder icon list

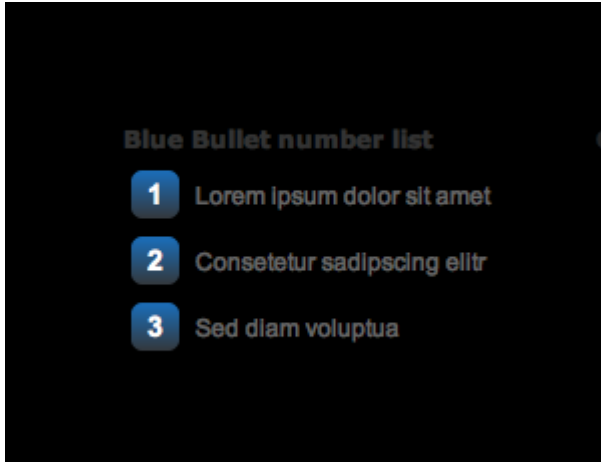

Usage:

```
<ul class="list-icon jsn-icon-  
folder"><li>...</li></ul>
```

For more information about available icons and their names, please read section **UniIcons** of this document.

Number list style **PRO**

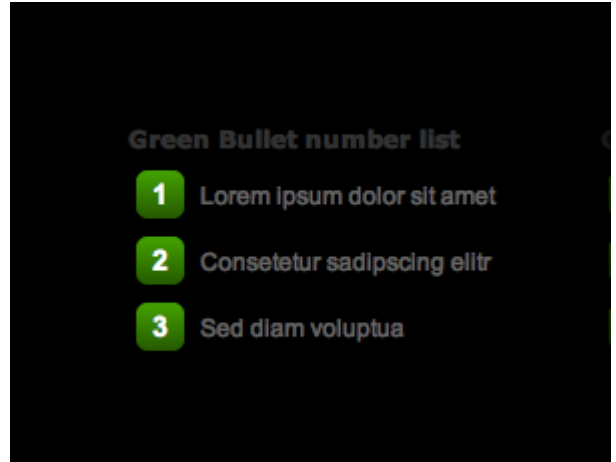

Blue Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-blue"><li>...
```

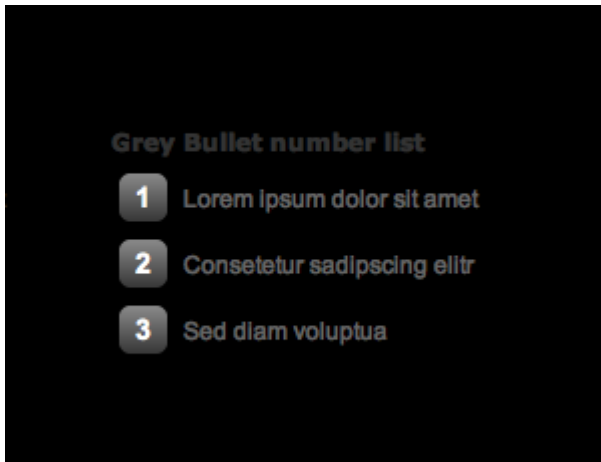

Green Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-green"><li>...
```

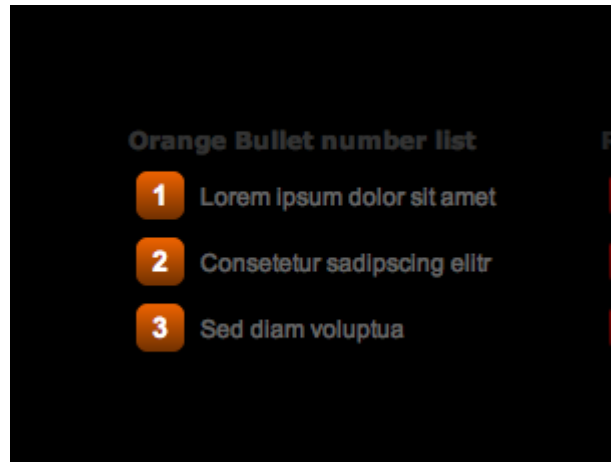

Grey Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-grey"><li>...
```

Orange Bullet number list

Usage:

```
<ul class="list-number-bullet bullet-orange"><li>...
```

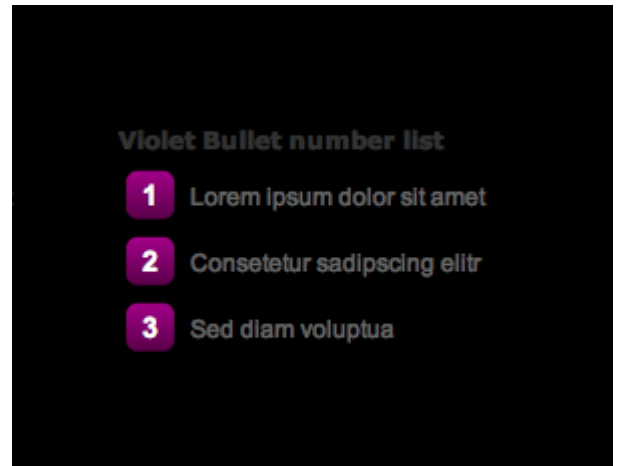

Red Bullet number list

Usage:

`<ul class="list-number-bullet bullet-red">...`

Violet Bullet number list

Usage:

`<ul class="list-number-bullet bullet-violet">...`

Blue Digit number list

Usage:

`<ul class="list-number-digit digit-blue">...`

Green Digit number list

Usage:

`<ul class="list-number-digit digit-green">...`

Grey Digit number list

Usage:

`<ul class="list-number-digit digit-grey">...`

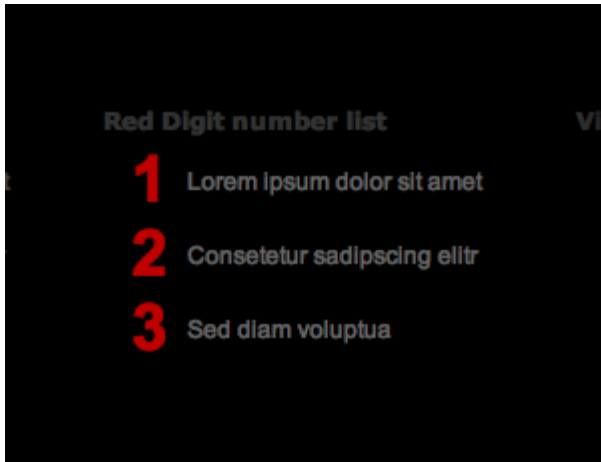

Orange Digit number list

Usage:

`<ul class="list-number-digit digit-orange">...`

Red Digit number list

Usage:

`<ul class="list-number-digit digit-red">...`

Violet Digit number list

Usage:

`<ul class="list-number-digit digit-violet">...`

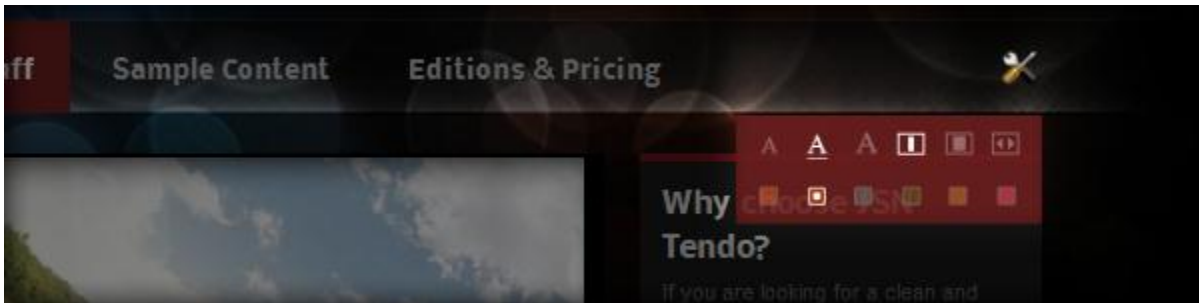

Site Tools

JSN Tendo provides three brand new features to enhance website user experience: **Width Selector**, **Text Size Selector** and **Color Selector**. By enabling these selectors, you will certainly be giving visitors the best user experience on your website. All settings from Site tools will be stored as visitor's browser cookies for further usage. If all selectors are disabled nothing from Site Tools will be shown.

Site tools Presentation **PRO**

You have two options to present Site tools.

Dropdown Menu

With this option, all selectors are elegantly arranged in the submenu panel. The drop-down animation, transparency and background color settings will be inherited from the Main Menu settings.

Inline Row

With this option, all selectors are located directly on the main menu bar. If you want to enable only some selectors, this option is the best.

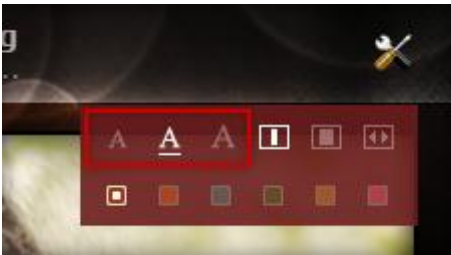

Width Selector **PRO**

Width Selector allows your website visitors to select the optimal template width for them. More information about template width can be found in section **Layout Dimensions** in this document.

You can disable this selector by setting template parameter **Enable Width Selector** to **No**.

Text Size Selector **PRO**

Text Size Selector allows your website visitors to select the optimal text size for them. For example, poor vision can select a big text size. More information about template width can be found in section **Font Size** in this document.

You can disable this selector by setting template parameter **Enable Text Size Selector** to **No**.

Color Selector **PRO**

Color Selector allows your website visitors to choose the color theme they like. This is a very cool feature for social websites where visitors' preferences are the most important. You can set up what color to include in the selector by defining them in template parameter **Colors in Selector**. For example: **cyan,red,green**.

If your website has a strong identity color and you don't want visitors to select any other color, just turn this selector off by setting template parameter **Enable Color Selector** to **No**.

Video tutorial

It guides you how to configure sitetools visually. Here is [video tutorial](#).

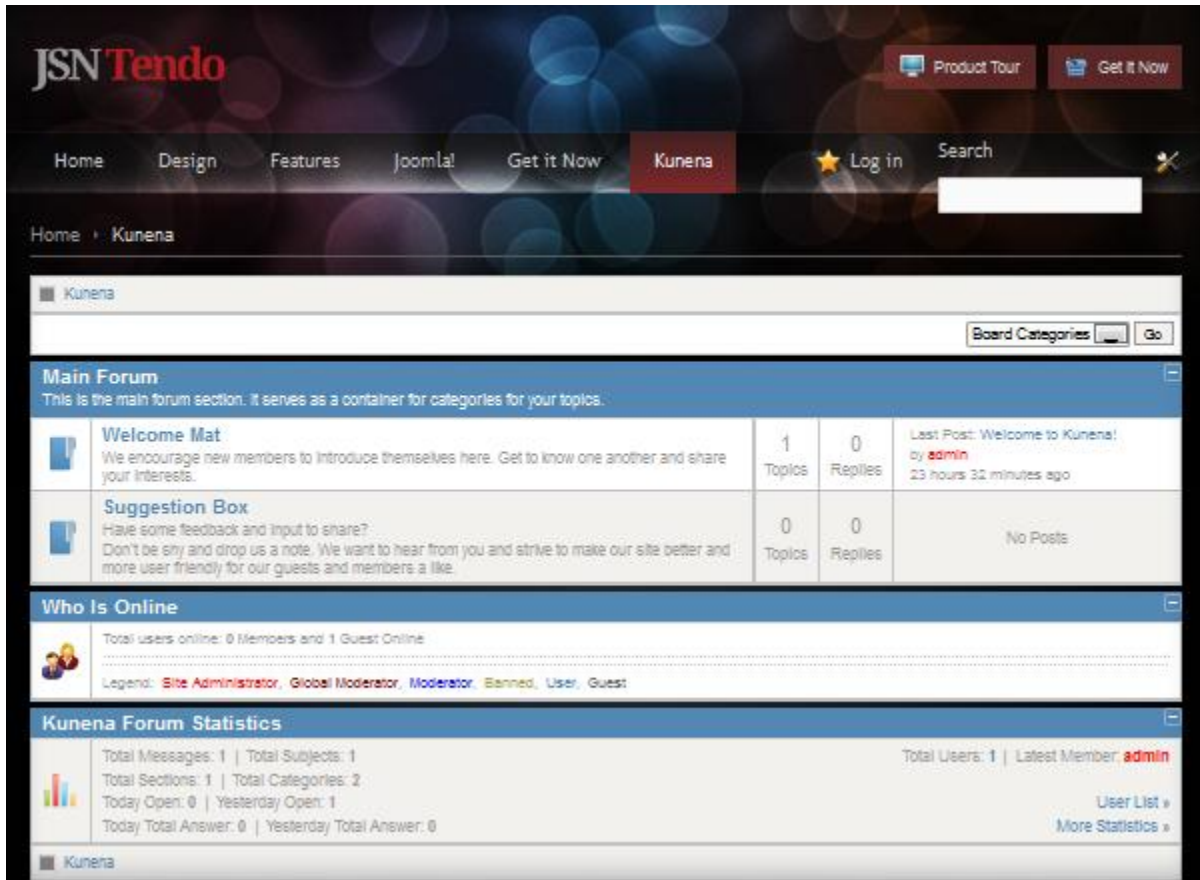

JSN Epic in the video is an example and these instructions can be applied to **JSN Tendo** template as well.

Extended styles

One of the hottest features of JSN Tendo is that it supports 2 popular Joomla extensions: **Kunena & K2**.

Kunena **PRO**

Thanks to Kunena, you can create a forum easily. Now JSN Tendo supports Kunena with a Kunena Theme. You can create a forum with enhanced designs, 6 color variations, RTL support and 4 modules styled.

Kunena without JSN Tendo theme

The screenshot displays the JSN Tendo Joomla! template with the Kunena forum extension installed. The header features the JSN Tendo logo, navigation links (Home, Design, Features, Joomla!, Get it Now, Kunena), and user options (Product Tour, Get it Now, Log in). The main content area shows the Kunena forum interface with a search bar, a 'Main Forum' section containing 'Welcome Mat' and 'Suggestion Box' topics, a 'Who Is Online' section showing 0 members and 1 guest, and a 'Kunena Forum Statistics' section with various counts and links for user list and more statistics.

Kunena with JSN Tendo theme

Styled modules

You can set 4 module designs - Latest module, Search module, Login module and Statistics module as Right-to-left layout.

The screenshot displays the Joomla! search module interface in a Right-to-left layout. The interface is divided into two main sections: **Advanced Search** and **Search Options**.

Advanced Search section:

- Search by User Name:** Includes a text input field, a label `:User Name`, and a checkbox labeled `:Exact Name`.
- Search by Keyword:** Includes a text input field, a label `:Keywords`, and a dropdown menu labeled `Search entire posts`.

Search Options section:

- Search in Categories:** A dropdown menu showing `All Categories`, `Main Forum`, `Welcome Mat -`, and `Suggestion Box -`. Below it is a checkbox labeled `Also search in sub-categories` which is checked.
- Find Posts from:** Includes two dropdown menus labeled `And newer` and `A year ago`.
- Sort Results by:** Includes two dropdown menus labeled `Decreasing order` and `Posting date`.
- Jump to Result Number:** Includes a dropdown menu labeled `Show 15 Search Results` and a text input field with the value `0`.

At the bottom of the interface are **Cancel** and **Search** buttons.

Search module in Right-to-left layout

Installation

1. You install [Kunena](#) via Joomla! administration.
2. Log in the [Customer Area](#), download JSN Tendo theme for Kunena.
3. Unzip file **jsn_tendo_kunena_unzip_me_first.zip**, then copy the folder **jsn_tendo** to the path **joomla_root\components\com_kunena\template**
4. Go to **joomla_root\components\com_kunena\template\jsn_tendo\language** and copy the file **en-GB.com_kunena.tpl_jsn_tendo** to **joomla_root\components\com_kunena\language\en-GB**
5. Go to the website backend -> **Component -> Kunena Forum -> Template Manager -> Set JSN Tendo** as default.

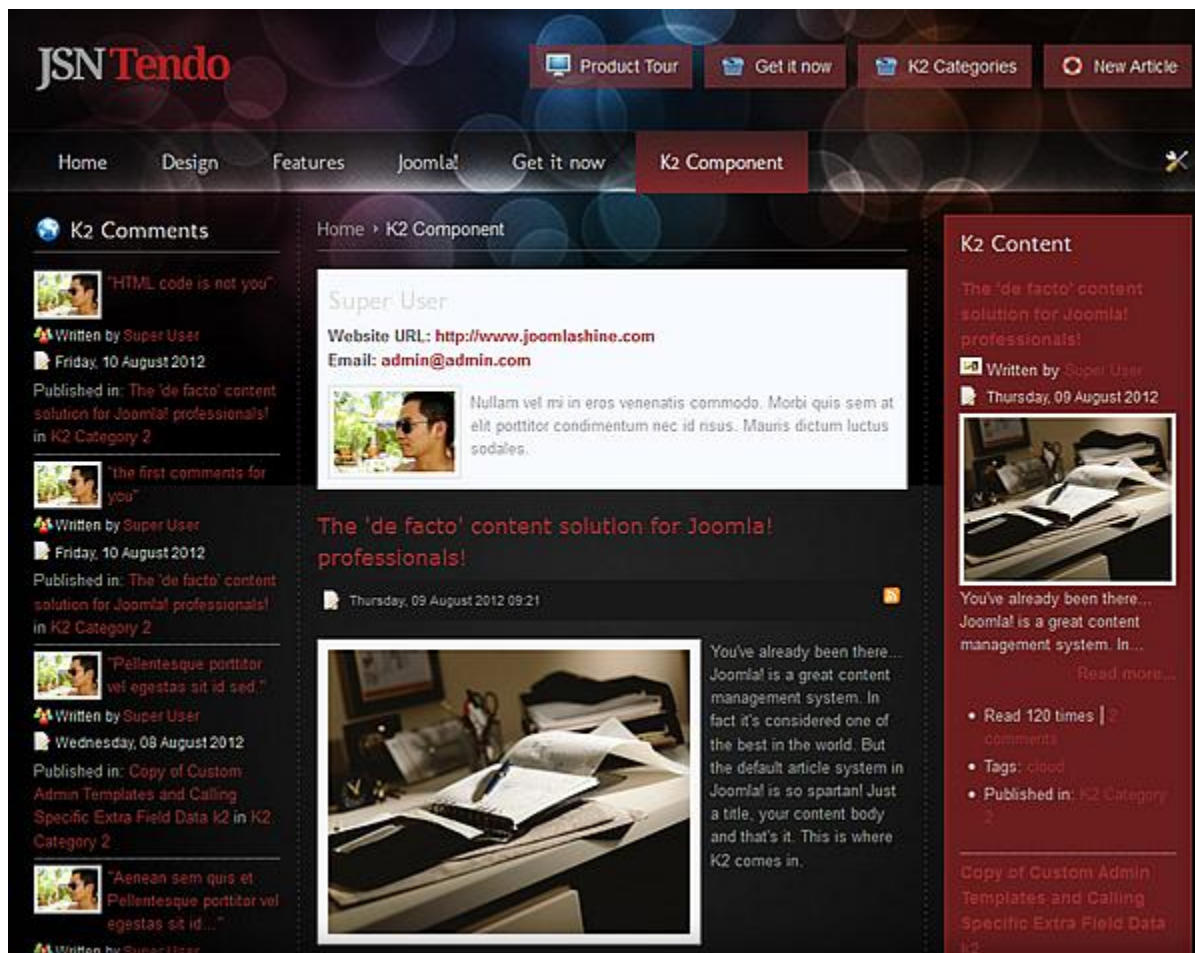

Now you have the JSN Tendo theme on your website.

Attention!

Kunena is not included in the JSN Tendo template package. You can download Kunena freely at <http://www.kunena.org/>

K2 Support

Here is how K2 and JSN Tendo combination looks like. You can see all **K2 components** such as K2 Comment, K2 Content, K2 Users, TagCloud, Article, etc work well with JSN Tendo.

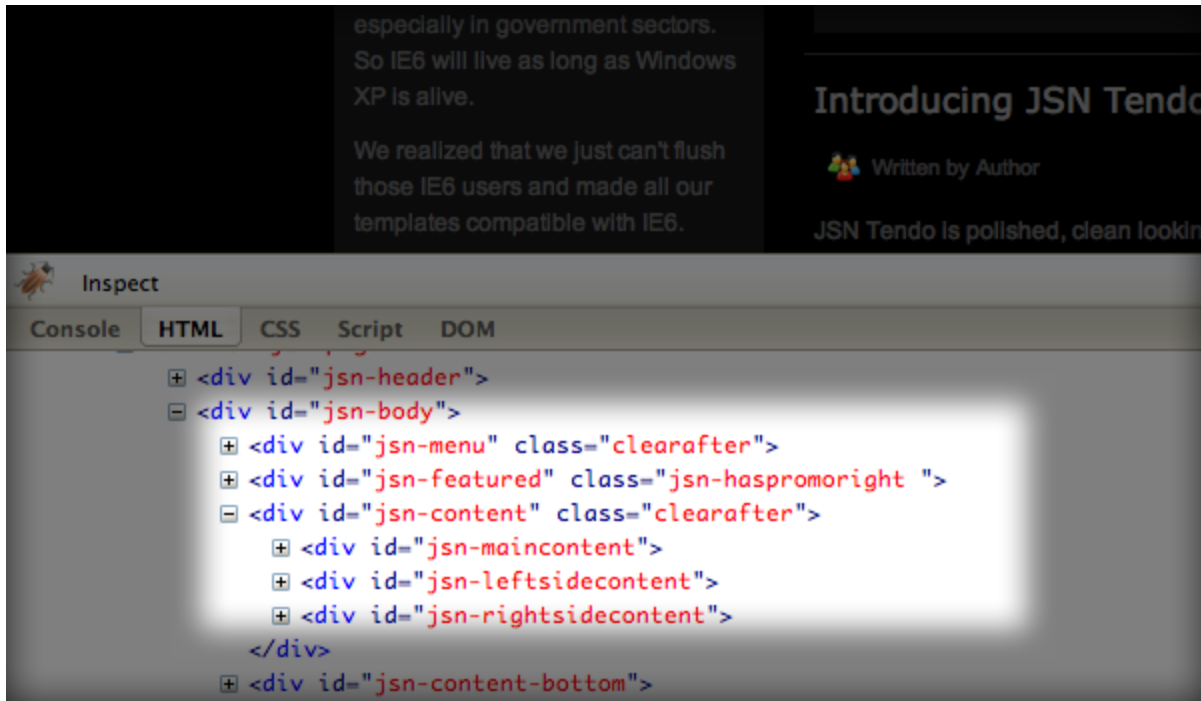

JSN Tendo is fully supported K2 style

Attention!

K2 is not included in the JSN Tendo template package. You can download K2 freely at <http://getk2.org/>

SEO & System

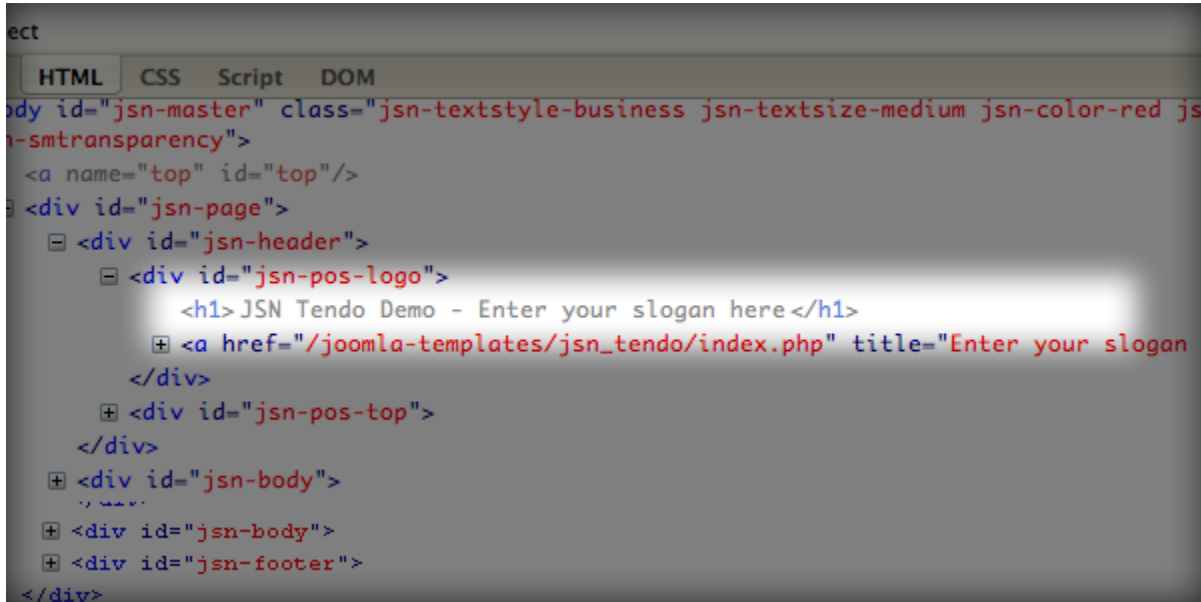

Source ordering

One of the most important SEO techniques is to make sure that search engines can find your critical content before others. To make this possible, in our template code structure we generate the **“center”** part first and only after that **“left”** and **“right”** columns.

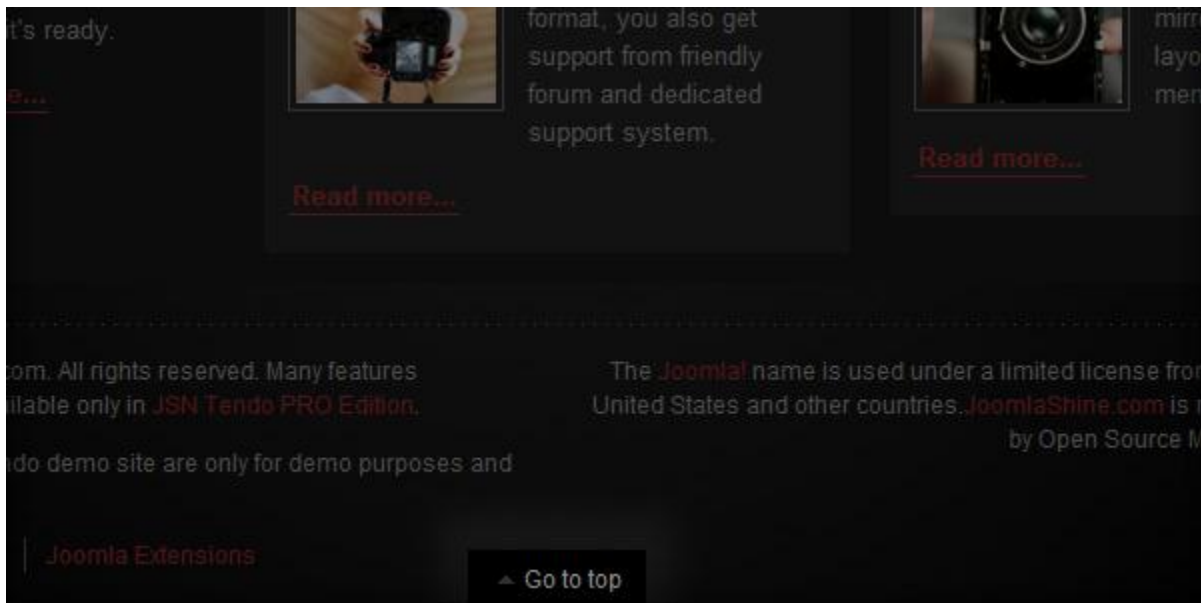

In this way, you can be sure that search engines will see your critical content first. You can use Lynx browser both [online](#) or [offline](#) to make sure of that.

Top H1 tag **PRO**

This feature allows you to wrap the website slogan to **<h1>** tag, which is good for both **SEO** and **accessibility**. As we all know, **<h1>** is the most important content tag and search engines normally pay special attention to the content in that tag. Once you've configured your keyword-powered website title and slogan, you can include them in the first h1 tag to increase SEO ranking.

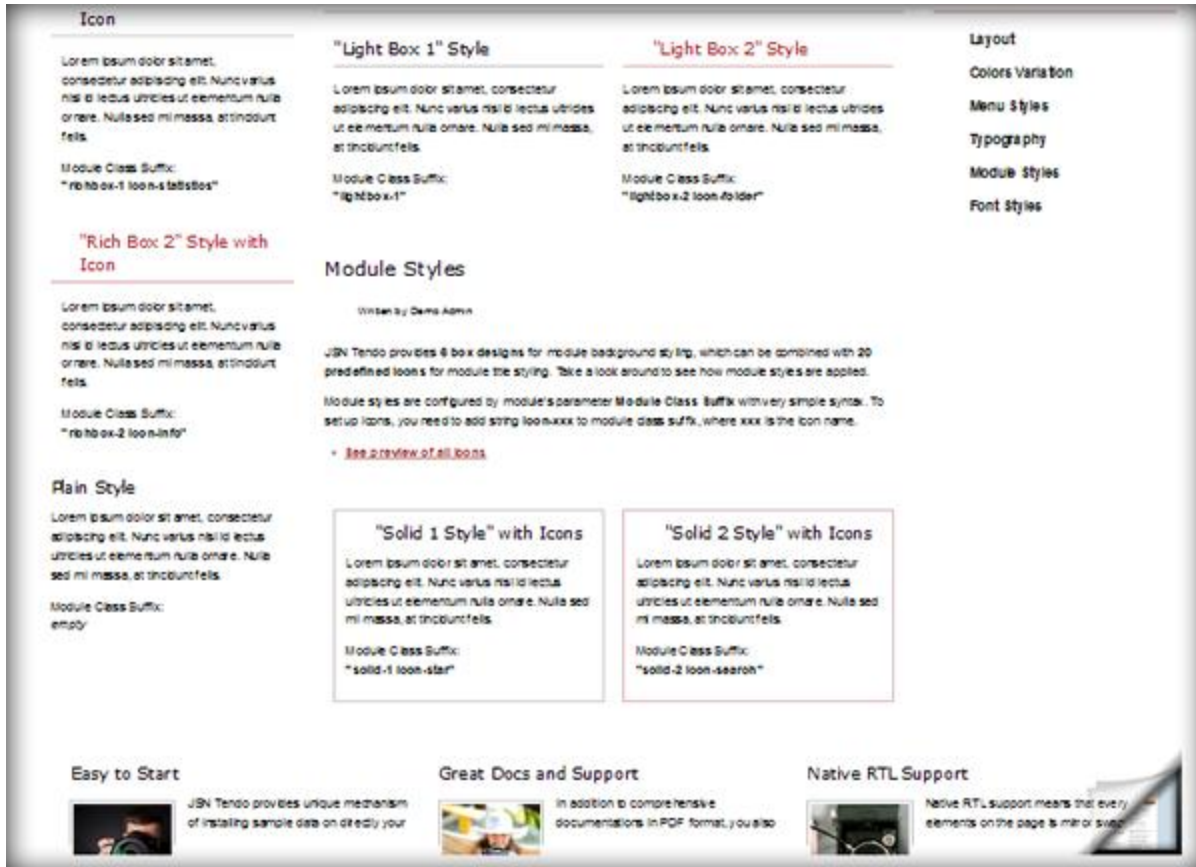

“Go to top” Link **PRO**

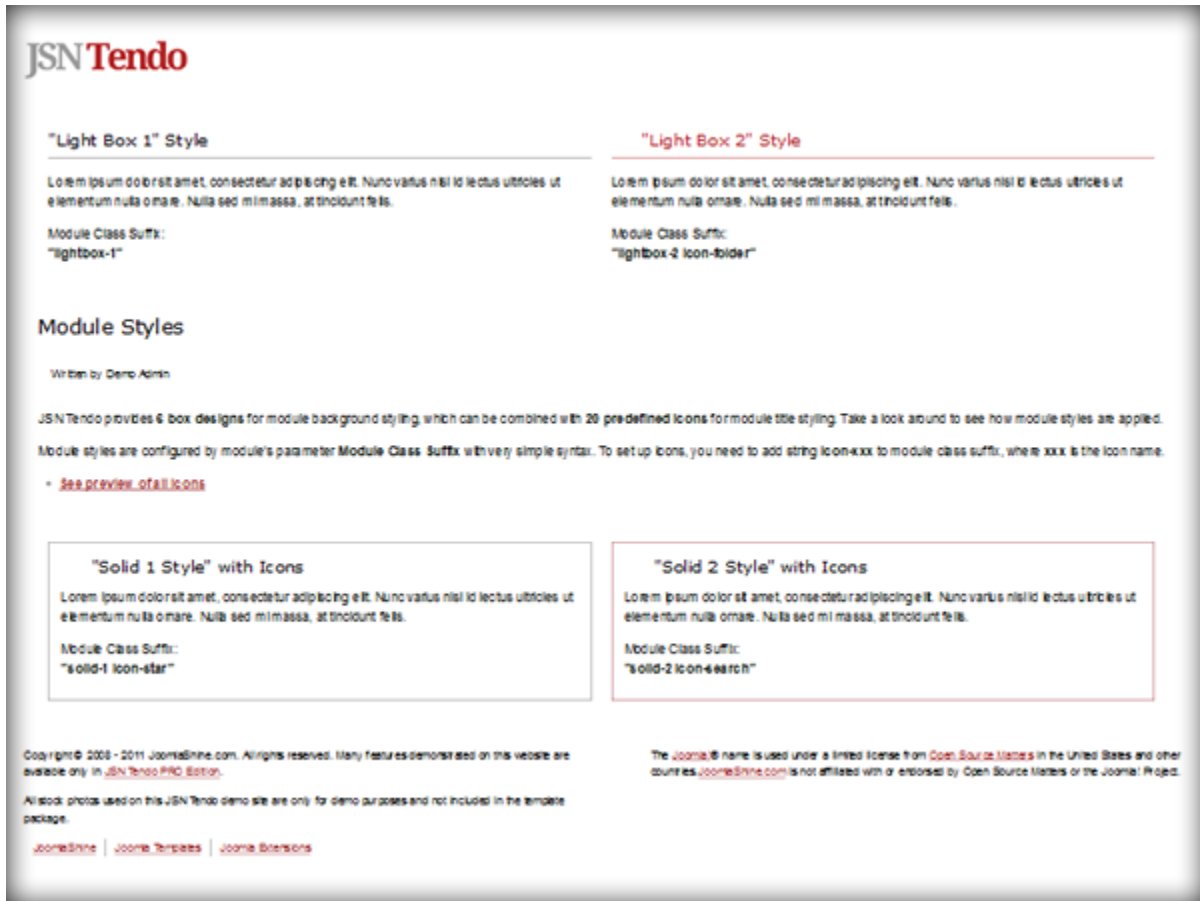

This feature allows you to put 'Go to top' link at the bottom of page. It will smoothly scroll your page to the top, which is nice and good for website usability.

Printing Optimization **PRO**

This feature will give your website visitors a totally optimized page for a printer with only the important content included. This is very useful when you want your website visitors to be able to print only the main content of the page and nothing else like the side-column content, etc.

Before printing optimization

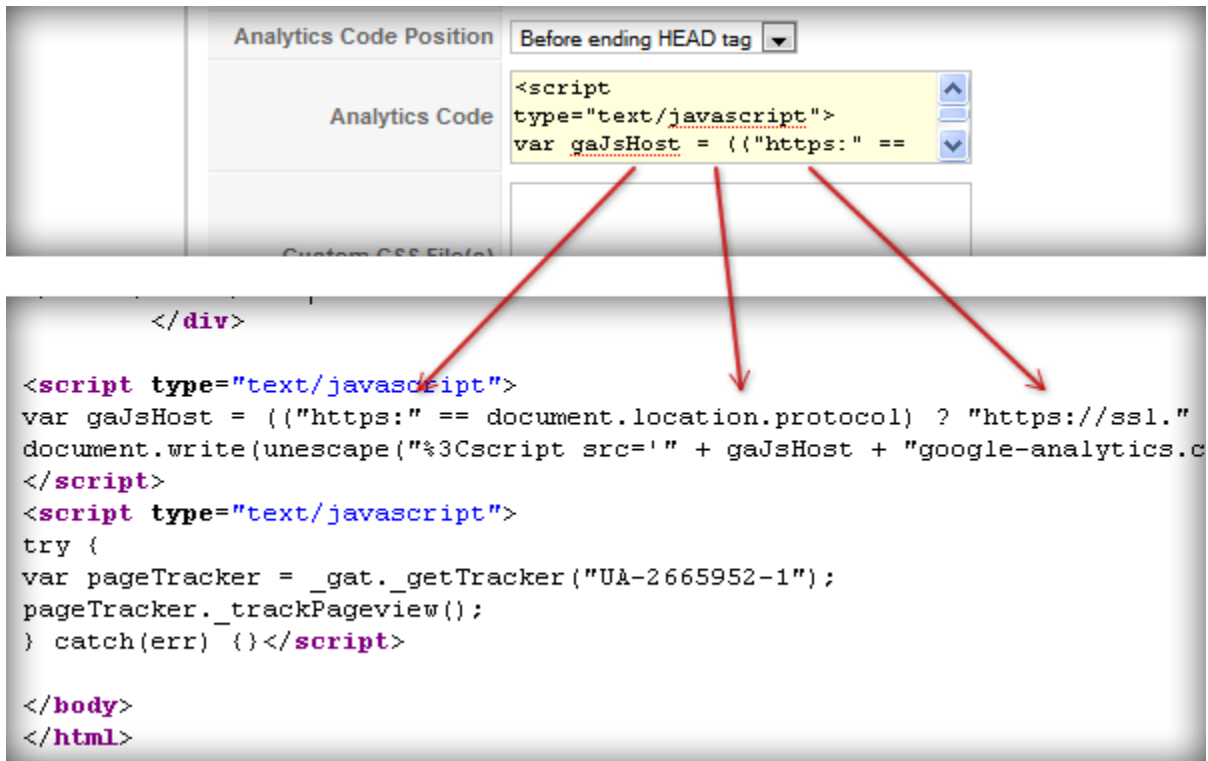

After printing optimization

As you can see on screenshots, not only the content is simplified, but also the styling is optimized to get pure black on white ready for printing page.

At anytime, you can turn this feature off so the whole page will be output to a printer.

Analytics Code **PRO**

This feature allows you to present any analytical code on your website HTML code by template parameter without having to edit **index.php** file.

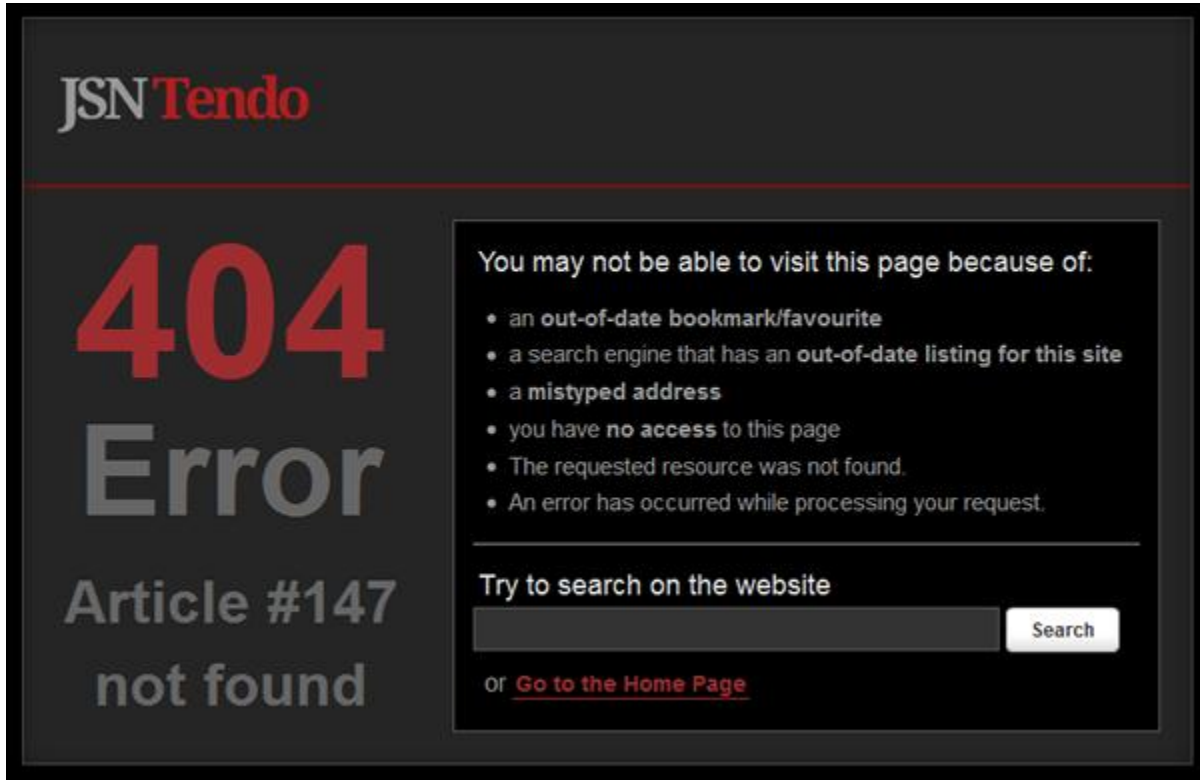

Analytics Code Position

You can define where to insert the code by template parameter **Analytics Code Position**. There are 2 options to choose from:

- Before ending ...**</head>** tag
- Before ending ...**</body>** tag

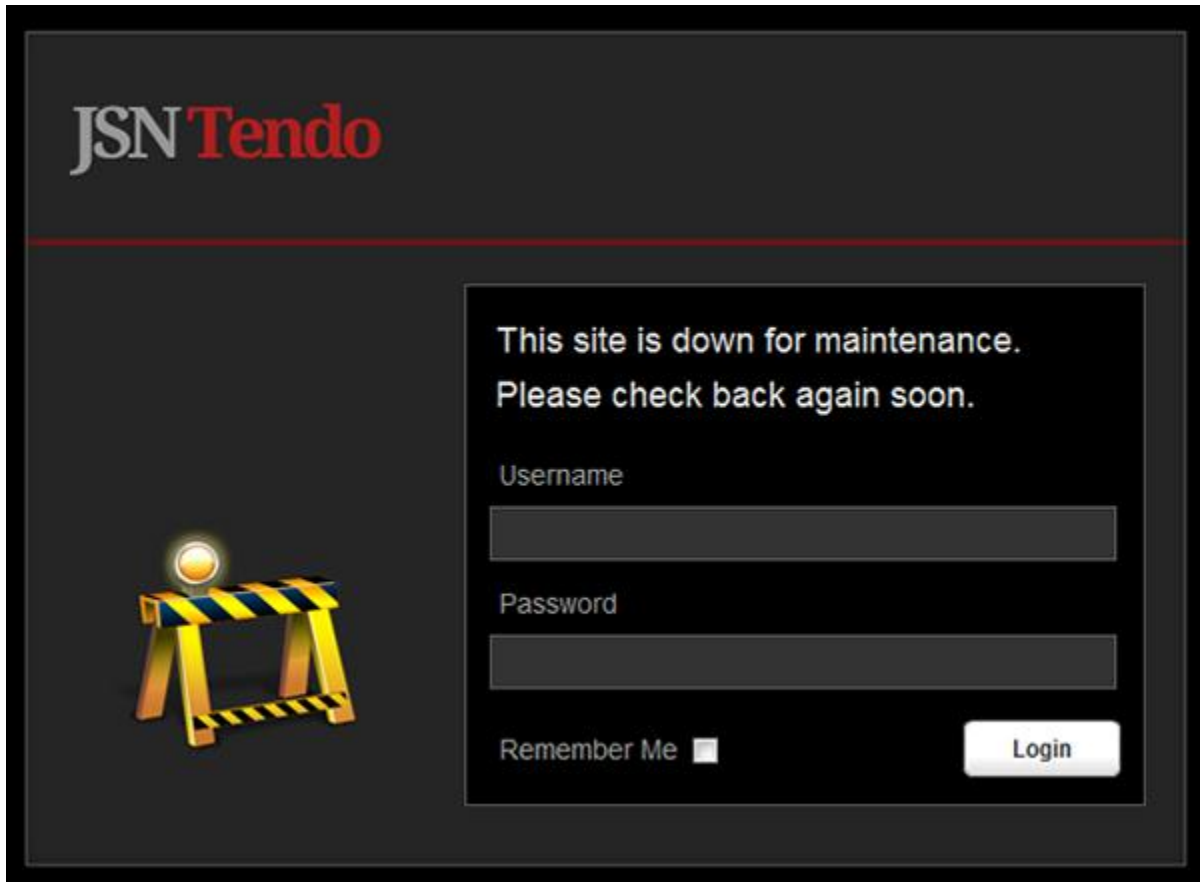

Custom 404 Error Page **PRO**

The default error page comes from Joomla! is super ugly and sure to scare people away from your site at first glance, so in JSN Tendo we provide a clean and good looking **Custom 404 Error** page for your need.

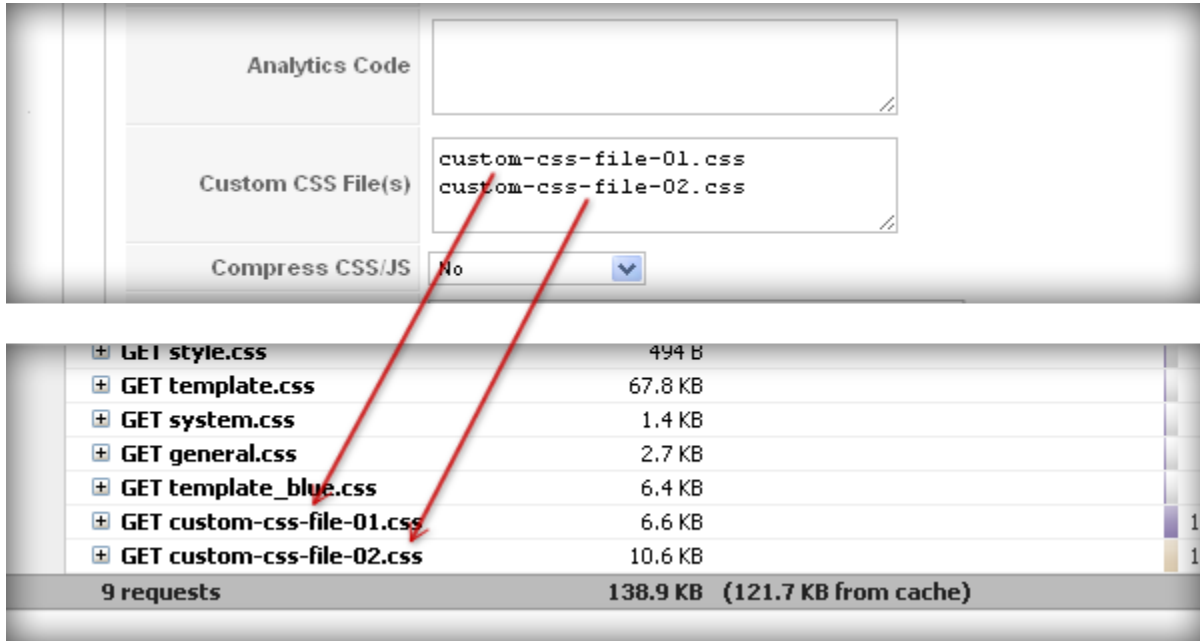

Custom Offline Page **PRO**

The default Joomla! offline page hasn't changed much since the old days and doesn't really look good. Therefore, we provide a **Custom Offline** page with professional and easy to customize your own way.

Custom CSS File(s) PRO

This feature allows you to load multiple custom CSS files among with template default files. If you enable **CSS/JS Compression** feature, all custom CSS files will be compressed as well. This feature is very useful, when you have special dedicated CSS file for content styling.

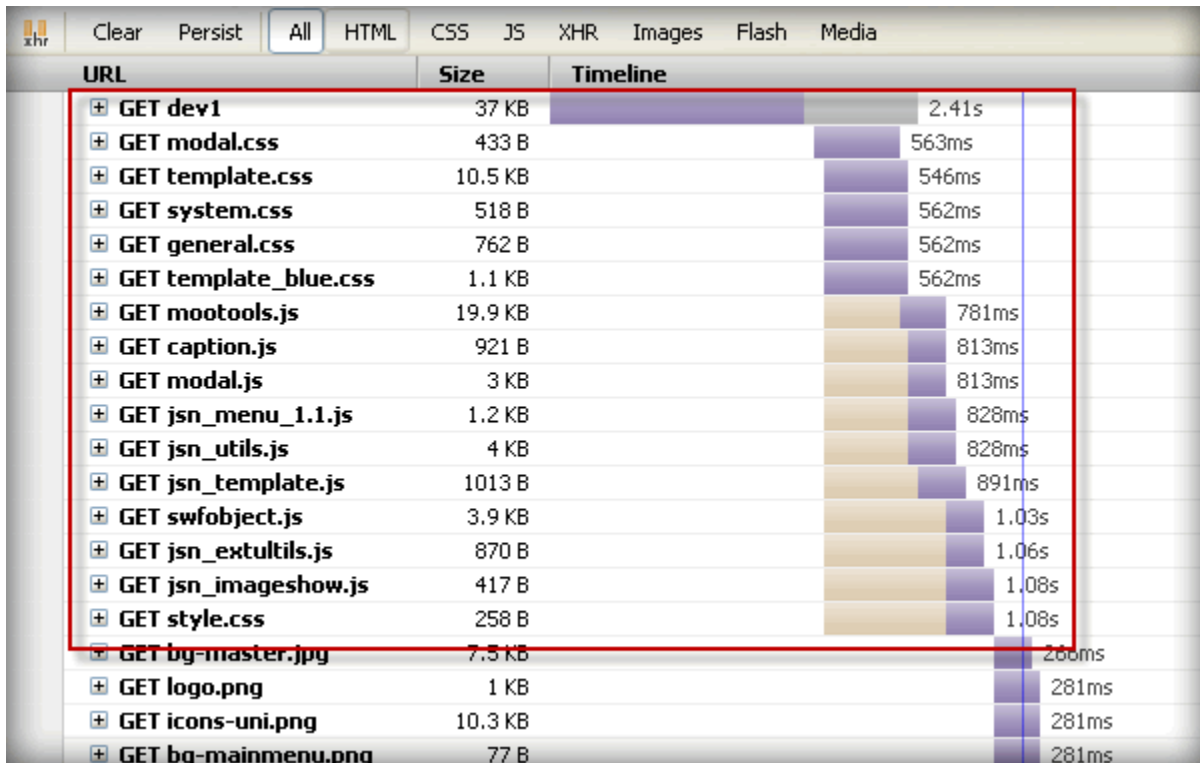

Custom CSS files are loaded with other template CSS files

Just put custom CSS files to template's CSS folder and define them in template parameter **Custom CSS File(s)** each file name at a line.

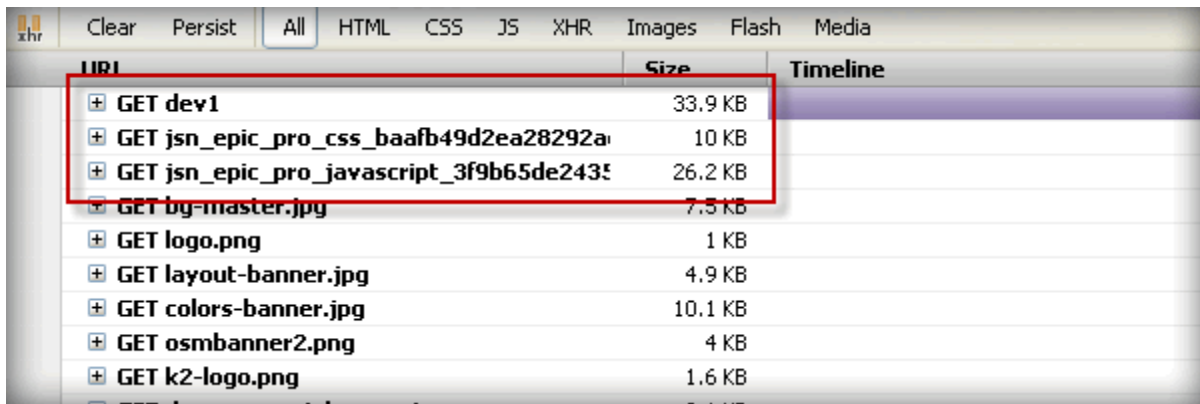

CSS/JS Compression **PRO**

This feature combines all CSS/JS files into a single file and delivers it in a compressed state to the browser.

URL	Size	Timeline
GET dev1	37 KB	2.41s
GET modal.css	433 B	563ms
GET template.css	10.5 KB	546ms
GET system.css	518 B	562ms
GET general.css	762 B	562ms
GET template_blue.css	1.1 KB	562ms
GET mootools.js	19.9 KB	781ms
GET caption.js	921 B	813ms
GET modal.js	3 KB	813ms
GET jsn_menu_1.1.js	1.2 KB	828ms
GET jsn_utils.js	4 KB	828ms
GET jsn_template.js	1013 B	891ms

GET layout-banner.jpg	4.9 KB	
GET colors-banner.jpg	10.1 KB	
GET osmbanner2.png	4 KB	
GET k2-logo.png	1.6 KB	

After enabling CSS/JS compression

By enabling CSS/JS compression feature, you can increase your website performance by about 35%.

Cache Folder

Compressed files will be stored in cache folder defined by template parameter **Cache Folder**. You can define any folder starting from Joomla root folder.

SqueezeBox

By default, Joomla supports pop-up modals. However, some Joomla versions don't support it. The parameter **Enable SqueezeBox** helps you display pop-up modals with all Joomla versions.

Compress CSS/JS: No

Cache Folder: tmp [Verify](#)

Enable SqueezeBox: ☐ No ☒ Yes

A red arrow points from the 'Yes' radio button to the SqueezeBox modal window in the image below.

Video tutorial

It guides you how to configure SEO & System visually. Here is [video tutorial](#).

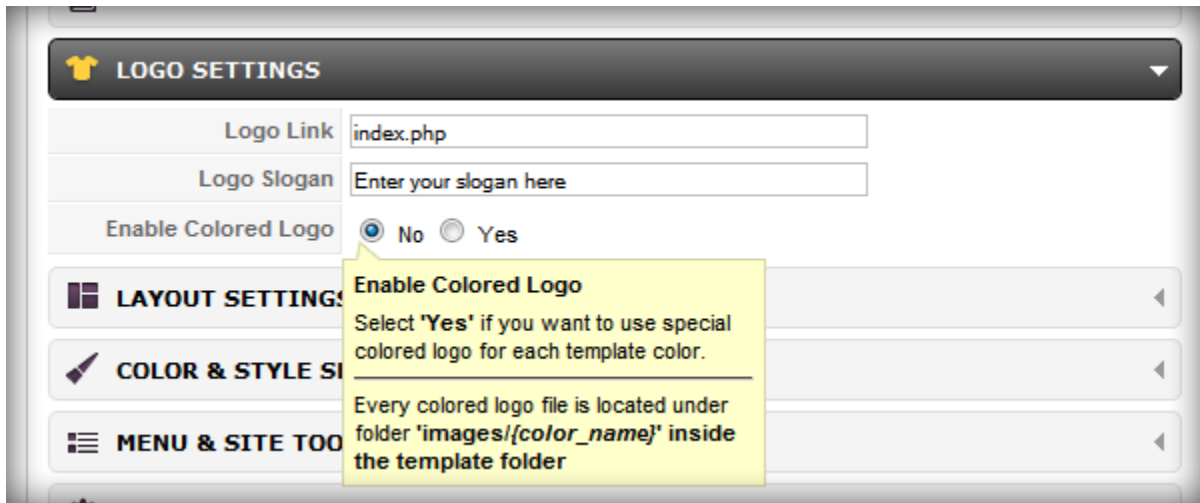

JSN Epic in the video is an example and these instructions can be applied to **JSN Tendo** template as well.

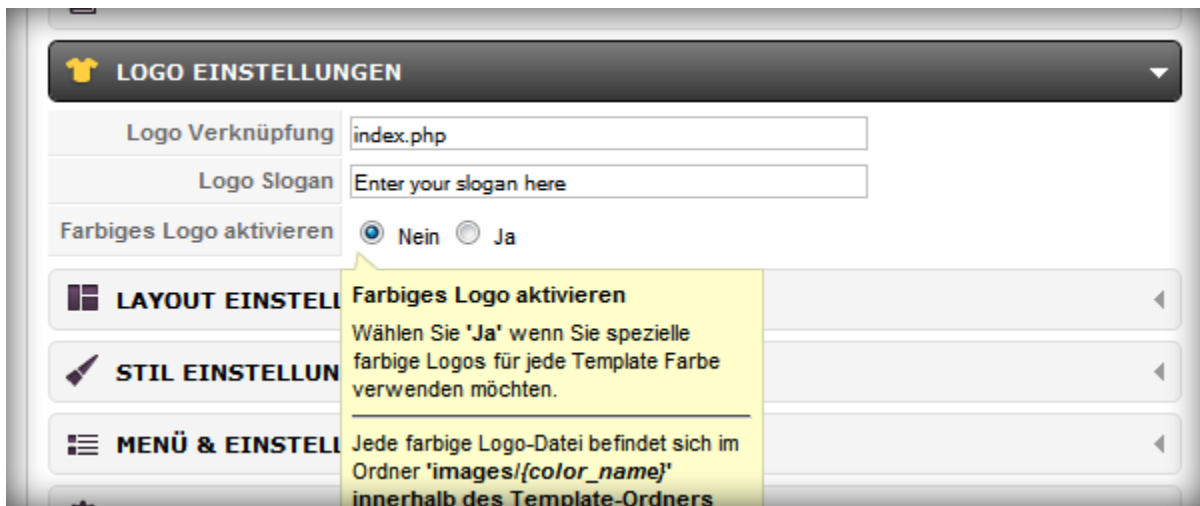

Multilingual support

In our templates, all wordings of both back-end and front-end are moved to separated language files, so you can easily translate them into any language you want. More information about how to make your own translation can be found in **JSN Tendo Customization Manual**.

Currently our templates support **14 primary languages** with more to come in the future.

Joomla! template JSN Tendo Configuration Manual © 2008 - 2012 <http://www.joomlashine.com>

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

If you want to contribute and add a translation into your own language, please feel free to contact us at:

<http://www.joomlashine.com/contact-us/general-inquiries.html>.

Information about cookies

The [New EU cookie law](#) states that website visitors, subscribers or users **must be provided with clear and comprehensive information about the cookies**: Names, purposes, storage time and access permission.

So in this part, JoomlaShine provides you with the information about cookies that JSN Tendo gets from customers.

<i>Type of cookie</i>	<i>Data collection</i>	<i>Purpose to use</i>	<i>Cookie session</i>
JSN_Tendo_PRO-width	Wide, Narrow, Float	Save width when users selector	Yes
JSN_Tendo_PRO-textsize	Big, Medium, Small	Save fontsize when users selector	Yes
JSN_Tendo_PRO-color	Color	Save color when users selector	Yes
JSN_Tendo_PRO-direction	Ltr, Rtl	Save direction when users selector	No

JSN Gruve cookies

These cookies are **used to store text value** for all the JSN Tendo functions, to make sure that JSN Tendo runs smoothly. Cookies will be **stored in a user's web browser directory** while a user browse a website and **only be removed when users clear cookies**.

What's next?

Now as you have learnt every feature of the template, it's time to move on and customize it to your needs. Go ahead and open the next documentation coming with the JSN Tendo package called **JSN Tendo v1 Customization Manual**. In this manual, you will find a detailed description about how to customize every bit of the template to make it suit your needs.

You can download the full documentation package and print for convenient reading.

“Joomla 2.5 Made Easy” – A pocket manual for Joomla newbies

A Free Ebook, written by JoomlaShine.com

Joomlashine has just released a **free e-book** which guides Joomla newbies to build a **Joomla 2.5** website from the scratch, easily and quickly. The book is **89 pages** long which include 6 chapters as following:

- Get to know about Joomla CMS
- Install Joomla 2.5 on local host
- Create content for your site
- Customize website appearance with a Joomla template
- Arrange modules in positions
- Expand your website functionality with Joomla extensions

You can download it for **free** in [English](#) and [German](#).

Give feedback

We would love to hear what have to say:

- [Submit a bug report](#) and we will fix it ASAP.
- [Give a lovely testimonial](#) to be placed in official "[Customers Testimonials](#)" page.
- [Tweet about this template](#) if you love it.

Check for updates

We are constantly updating our template repertoire, so don't forget to visit [JoomlaShine templates page](#) to check for something new.
